

THIS WEEK IN CAREGIVING

October 12, 2022

CAREGIVING IN THE NEWS

How the U.S. Will Revamp Family Caregiver Support

Without family caregivers, many hospice patients would be unable to receive care in their homes.

To help keep patients at home — the lowest-cost setting of care — the federal government recently unveiled a National Strategy to Support Family Caregivers, which has more than two decade's worth of advocacy behind it.

The U.S. Department of Health and Human Services (HHS) [announced the strategy](#) late last month. It includes close to 350 federal programs to assist the more than 53 million Americans who care for seriously ill or disabled loved ones in their homes, according to the U.S. Administration for Community Living (ACL), an HHS sub-agency.

When a Family Member Steps in to Help an Ill Loved One, Who Cares for the Caregiver?

It's a familiar story for anyone who has had the opportunity to care for an ill loved one.

It may start out with accompanying them on doctor visits, making them a meal or taking them for a scenic drive. In the case of many, however, the needs grow until the part-time caregiving role becomes a full-time job.

Solo Agers Facing the Future Need a Network of Friends

Stacy Davenport says she began to worry about her future just before she turned 60.

"I was flipping out and talked to a friend about why I was anxious about 60," she says. "If I get sick, I have nobody to take care of me."

The very next year — in 2018 — two minor strokes "woke me up to I'd better get my stuff in order."

NAC NEWS AND UPDATES

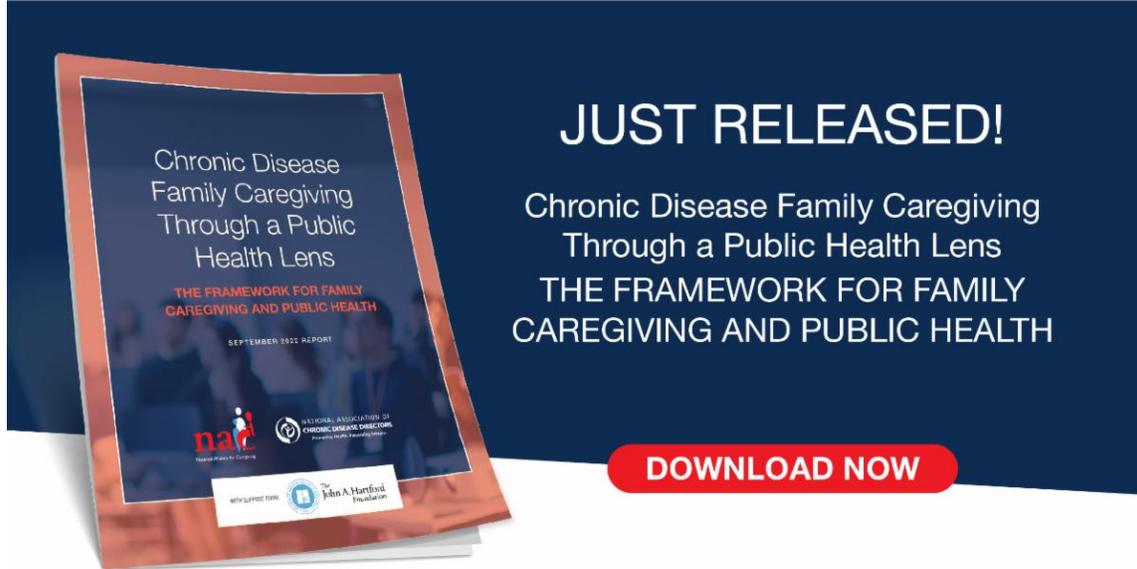

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. [Assessing the Pain of Care Recipients: Tools Available to Family Caregivers](#) utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

NAC Releases New Report: Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America's 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it's needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC's report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

World Carers Conversation 2022 Session Recordings

World Carers Conversation returned May 19, 2022 as a global, virtual event with the support of EMD Serono and Embracing Carers. Innovators, researchers, policymakers and carer advocates from around the globe learned about advancements in the field, got inspired, and made connections that matter for the future of carers everywhere. These recordings cover the primary conversations and topics discussed.

To view the slide deck used in the event, click [here](#). To view the recordings, click below.

[VIEW RECORDINGS](#)

Global Voices of Caregiving: A PhotoVoice Project

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn't work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver's own experience and tells a diverse story of what it's like to care for others, an act which connects us all.

To view and hear these stories, please click on the red button below.

The Circle of Care Guidebook Series

The National Alliance for Caregiving's *Circle of Care* library is a series of guidebooks dedicated to providing resources, support and information to caregivers caring for someone in a specific disease space. Part of an ongoing effort of NAC, these first three guidebooks were developed with the assistance of both patient-advocacy and consumer-facing partners:

- **Circle of Care: A Guidebook for Mental Health Caregivers**
- **Circle of Care: A Guidebook for Caregivers of Children and Adolescents Managing Crohn's Disease**
- **The Circle of Care Guidebook for Caregivers of Children with Rare and/or Serious Diseases**

NAC is proud to lend their expertise on caregiving through these guidebooks. To access

the guidebooks for yourself and to share them with other caregivers in your life, please visit the link below.

NATIONAL CAREGIVERS CONFERENCE

“Emerging Forward, Together”

2022 National Caregivers Conference

October 16th - 17th, 2022

The Family Resource Network, a New Jersey-based organization, will re-convene many of the nation’s industry leaders and family caregivers for the 2022 National Caregivers Conference.

The theme of NCC 2022 is “Emerging Forward, Together”. COVID-19 took a significant toll on the Nation becoming the most challenging times we’ve ever faced. Unpaid family caregivers were impacted by the pandemic in four categories: environmental, technological, societal, and economic. As the Nation is on the path of recovery, The Family Resource Network puts emphasis on the necessity to address the issues in conjunction with the others. The effectiveness of the recovery relies solely on how well policymakers, leaders, and professionals work together. The National Caregivers Conference is committed to creating a space to collaborate, learn and support.

Virtual Attendance

Family Caregiver

\$100 Virtual Early Bird Family Caregiver

\$125 Virtual Final Family Caregiver

Professional

\$175 Virtual Early Bird Professional

\$200 Virtual Final Professional

Rare Diseases and Orphan Drug Products Breakthrough Summit

October 17th - 18th, 2022

The National Organization for Rare Diseases (NORD) is hosting its annual Rare Diseases and Orphan Drug Products Breakthrough Summit, which will be held on October 17-18, 2022, in Washington DC. During this annual conference, expert rare disease leaders will cover critical topics and the life-changing experiences of millions of Americans impacted by rare disease.

For more information about the Summit, click [here](#). To register, click the red button below.

AFA's Women & Alzheimer's Summit

October 18, 2022 | 9:00 AM - 1:00 PM ET | In Person

The Alzheimer's Foundation of America (AFA) host an in-person Women & Alzheimer's Empowerment Summit on October 18, at The Whittemore House, 1526 New Hampshire Ave NW, Washington, DC. Women are more likely than men to develop dementia and are disproportionately represented as care partners for those living with the disease. To explore this dichotomy and present new tools and best practices for care partners, AFA's conference will feature Members of Congress, researchers, medical providers, and care partners who will relay their experience to empower attendees with the confidence and knowledge to provide better dementia care. Interested parties are encouraged to register as soon as possible.

Webinar: Older Adult Mental Health 101 for Community-Based Organizations

October 18, 2022 | 1:00 PM - 4:00 PM ET | Online

While older adults have lower rates of mental health and substance use issues than younger adults, these issues can impact functioning and quality of life much more profoundly. Community based organization staff who interact with older adults would benefit from an understanding of the unique ways that these disorders can present in older adults, along with the impact of life events, the environment, and systemic ageism.

Tune in for this webinar presented by the E4 Center of Excellence for Behavioral Health Disparities in Aging for a discussion about older adults and mental health.

Workshop: The Cancer-Alzheimer's Disease Nexus: Exploring Relationships, Mechanisms, and Therapeutic Implications

October 18th - 19th, 2022

On October 18 and 19, 2022, the National Institute on Aging (NIA) will sponsor a 2-day virtual workshop on Alzheimer's Disease and Cancer. Recent research has suggested a complex relationship between Alzheimer's disease and cancers. Several potential mechanisms have been proposed and warrant further investigation. Understanding the intersection of the underlying causes and biology for these two distinct families of diseases with one another may offer novel approaches to identify new therapeutic approaches and possible opportunities to repurpose existing drug candidates.

The goal of this 2- day workshop is to set scientific priorities and determine future directions for research in this area. We look forward to exploring the state of the science, as well as the opportunities and challenges, in areas such as:

- The link between cancer and Alzheimer’s Disease
- Genes, Mechanisms, and Epidemiological Evidence
- Cancer Chemotherapy and Cognitive Dysfunction
- Meds, Mechanisms, and Drug Repurposing

To learn more about the workshop, click [here](#). To register, click the red button below.

2022 NHCGNE Leadership Conference

October 18th - 20th, 2022 | Online

The National Hartford Center of Gerontological Nursing Excellence (NHCGNE) will be hosting its 2022 Leadership Conference from October 18-20, 2022.

The conference will feature plenary sessions, leadership workshops, discussant reports and panel discussions that explore the current state of knowledge about national and international aging, dementia and mental health science, curricular innovations, evidence-based clinical practice, and health policies.

For more information about the conference, click [here](#). To register, click the red button below.

AFA Educating America Tour

October 19, 2022 | 9:00 AM - 12:30 PM ET | In Person

AFA’s Educating America Tour connects communities across the country with information about Alzheimer’s disease, brain health, caregiving and more. Each tour stop provides a free educational conference to the community where participants can learn from local and national experts and ask questions.

To register, click the red button below.

Forms and Stages of Dementia

October 19, 2022 | 6:00 PM - 7:00 PM ET | Online

This webinar will provide attendees with a a better understanding of what dementia is, the most common types, signs/symptoms, and its progression.

To learn more, click the red button below.

Reasoning, Planning and Emotional Responses

October 20, 2022 | 8:30 AM - 10:00 AM ET | Online

This online session is a good opportunity to focus specifically on some of the planning and emotional control challenges which can occur for a person with dementia. We explore support strategies which can really impact on the wellbeing of the person and most importantly your ability, as carer, to cope with the challenges.

These challenges may include the ability to start and stop tasks, moderate emotional responses and using appropriate social behaviours. By understanding the challenges for the person with dementia, this session will provide you with the knowledge that you have the ability and skills to support some of these challenges.

This session is for you if:

- you would like to learn about how changes in the brain can affect the emotional responses and ability to control of everyday situations
- you would like some ideas for supporting the person and reduce your own fear or embarrassment of potential situations
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

To register, click the red button below.

Managing Money: What Every Alzheimer's Caregiver Needs to Know

October 20, 2022 | 6:00 PM - 7:00 PM ET | Online

Learn about the benefits of early planning, how to assess a loved one's financial and legal needs, finding support and more.

When a loved one is diagnosed with Alzheimer's Disease or dementia, it is often a marathon of emotions, challenges, and decisions that caregivers and family members need to face. And among these many challenges is that of personal finances.

To explore some of the financial challenges facing caregivers, Town & Country is collaborating with the Alzheimer's Association of Maine to offer this virtual education session on "Managing Money: What Every Alzheimer's Caregiver Needs to Know". In this session you will learn how to start a conversation about finances with your loved one, the benefits of early planning and budgeting, how to assess long-term financial and legal needs, finding support, community resources and more.

If you are a loved one of or the caregiver for a person with Alzheimer's Disease or dementia, plan to join us on October 20th for an hour with Anne Romney, an Alzheimer's Association volunteer and educator, who will share her knowledge and insights into the many financial challenges facing families of someone with Alzheimer's and provide

strategies and resources to help you plan and navigate this journey.

Webinar: Relationships, Family, and Mental Health

October 25, 2022 | 1:00 PM - 2:00 PM ET | Online

The complicated nature of mental illnesses can make relationships challenging, and caregiver stress — the emotional and physical stress of caregiving — is common. Learn strategies to set boundaries, respond to difficult behavior, and manage your own stress in this one-hour webinar with a licensed therapist.

Fine print: Certificates of attendance are provided at no cost. CEUs are not provided. Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.

About the instructor: Jaymi Dormaier is a Licensed Master Social Worker with ten years of experience in the mental health field. In Jaymi's career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction. She is passionate about helping others live a life they love.

Everyone's Telling Me to Take Care of Myself

October 25, 2022 | 2:00 PM - 3:00 PM ET | Online

As caregivers our plates are full and being told we need to add self care to our lists can feel both tone deaf and hurtful, even as we recognize that our own well-being could use some extra support. Join caregiver and creator of The Negative Space, Allison Breininger, for an interactive session about how to realistically care for ourselves in the midst of caregiving.

Allison Breininger has been a caregiver for her husband since 2011, through a bone marrow transplant and seven cancer diagnoses. Experiencing firsthand the ways that caregivers are unseen and unsupported, she founded the non-profit The Negative Space, through which she shines light on the realities of caregiving, provides direct services to caregivers and educates and equips those who support them with concrete tools and strategies. She co-hosts the In Sickness podcast, provides individual coaching to caregivers nationwide, facilitates support groups and education sessions, partners with multiple organizations to more intentionally support caregivers, and sells caregiver gift boxes.

To register for this event, click the red button below.

Hospital at Home Users Group™ Virtual Annual Meeting, Thursday, October 27, 2022

AAHCM 2022 Annual Meeting Home Based Medical Care: Growth Across the Field

October 27th - 29th, 2022 | Online

The Home Care Medicine (HCM) landscape has evolved rapidly to become one of the fastest growing healthcare segments, expected to nearly double by 2028. Fueling this incredible growth is an aging population with both complex care requirements and an unprecedented desire to age in place with dignity and comfort. Collaboration across the HCM field is key to meeting the growing needs of this vulnerable population. From primary care to palliative care, social work to supportive care, hospital-at-home to home health agencies and beyond, we must work together to grow HCM and transform the industry for our patients.

Join colleagues, industry partners, and home care advocates to share insights and inspiration at the AAHCM 2022 Annual Meeting. For more than 25 years the Academy has represented the leaders of medical care in the home, and at this year's meeting we will explore the incredible potential of home care medicine to improve the lives of patients and transform the healthcare industry.

Be a part of all the ways we can grow together — be at the 2022 Annual Meeting in Orlando!

We'll dive into evidence-based clinical insights, decipher the evolving policy landscape, examine the latest in population health and health equity, share practice management innovations, and more.

For more information about the conference, click [here](#). To register, click the red button below.

The Integrative Approach to Alzheimer's Disease

November 3, 2022 | 1:00 PM - 1:30 PM ET | Online

November is Alzheimer's Awareness month and our practice is helping spread the facts about the disease that affects about 50 million people worldwide.

CentreSpringMD invites you to join Dr. Stephanie Grossman, our Alzheimer's specialist, as she discusses:

- Risk factors of the disease
- Preventative measures
- Signs and symptoms
- The Bredesen Program
- Our holistic approach to treatment and management

At the end, there will be a question and answer segment where you can submit your questions to Dr. Grossman. See you there!

2022 AAH National Acute Care for Elders Conference

November 4, 2022 | 10:00 PM - 1:00 PM ET | Online

The National Acute Care for Elders (ACE) Virtual Conference trains and educates healthcare professionals across Advocate Aurora Health, as well as multiple other health systems across the country and beyond. We will continue to seize the opportunity to use technology and reach more healthcare workers than ever before by offering this conference virtually. By bringing in national speakers from around the world, this conference helps to implement best-practice models of care in our own communities and draws national attention towards the efforts to improve care for vulnerable, older adults.

TARGET AUDIENCE

This course is intended for RNs, MDs, DOs, NP, PT, and other interested health professionals.

LEARNING OBJECTIVES

At the end of this session, learners should be able to:

1. Identify and address the unique vulnerabilities of older adults who are acutely ill or injured.
2. Describe practice improvements to better address the needs of older individuals along the continuum of care.
3. Describe key lessons learned as our health systems prepare to care for populations of older Americans.

Webinar: Become an Age-Friendly Health System in 2023 with HANYS

November 7, 2022 | 1:00 PM - 2:00 PM ET | Online

HANYS is recruiting teams to join the 2023 New York State Age-Friendly Health Systems Action Community and New York Geriatric Emergency Department Accreditation Collaborative.

The Action Community supports hospitals, health systems and other providers as they implement evidence-based interventions to transform care for older adults using the Institute for Healthcare Improvement's Age-Friendly framework. The American College of Emergency Physicians GEDA collaborative promotes geriatric-focused education, policies and protocols, and quality improvement projects to improve the care of older adults in the ED.

During the webinar, attendees will hear IHI and DOH representatives share the value becoming age-friendly can bring to your patients and clinicians. Past Action Community/Accreditation Collaborative teams will also be present to speak about their participation experience and answer questions. Lastly, HANYS staff will outline next steps for those that want to participate, including how to enroll and apply for funding.

This event is open to HANYS members and non-members.

Championing Caregivers

November is **#NationalFamilyCaregiversMonth**! Caregiving can feel at times like a thankless job. Join this workshop where we will take a closer look at resources available to those who give that extra care, as well as offer tips for self-care, advocacy, and ways to de-stress.

Championing Caregivers: Celebrating National Family Caregivers Month

November 9, 2022 | 12:00 PM - 12:45 PM ET | Online

November is National Family Caregivers Month.

Caregiving can feel at times like a thankless job. This November, we celebrate those who lovingly take on extra everyday tasks for those who may not be able to do so for themselves. Whether it's bathing; cleaning; cooking; shopping; or comforting family or the friends we consider family, caregivers need our support too. These individuals often dedicate much of their free time caring for others. This workshop will take a closer look at resources available to those who give that extra care, as well as offer tips for self-care, advocacy, and ways to de-stress.

Virtual Presentation via Zoom

Audience: Caregivers and Friends & Family of Caregivers

Duration: 45 Minutes

Hosted by: Glenn Ellis, MPH, CHCE

Caregivers of Wounded, Ill, Injured Service Members and Veterans

November 10, 2022 | 8:00 PM - 9:00 PM ET | Online

Developed in collaboration with the Elizabeth Dole Foundation to address the unique needs of non-professional caregivers of service members and veterans. The activities aim to help participants address three common concerns among military caregivers: isolation, identity challenges and maintaining personal wellness.

Service to the Armed Forces Workshops: The American Red Cross Service to the Armed Forces division offers free virtual workshops aimed to build resiliency among our service members, veterans, and their family members. This live discussion is facilitated by a licensed mental health professional from our Service to the Armed Forces team. You will have an opportunity to share with others, learn and practice new skills, and ask questions in a small online group.

If you have any questions about this workshop or any of our other Service to the Armed Forces activities (emergency communications, resiliency workshops, financial assistance, information and referrals, casework, volunteer opportunities, etc.) please contact our Hero Care Center at 877-272-7337, redcross.org/herocarenetwork, or access the Hero Care mobile app. The app can be downloaded by searching for American Red Cross in the Apple App Store and the Google Play Store for Android or by going to redcross.org/mobileapps

DECEMBER

Alzheimer's Family Support Center
Until there's a cure, there's community.

J. Levin Memorial Conference on Alzheimer's: Behavior Management Strategies

December 2, 2022 | 10:00 AM - 3:00 PM ET | Online

The Alzheimer's Family Support Center presents its annual free Zoom conference on Alzheimer's featuring Teepa Snow.

About this event

This year's conference focuses on behavior management. Topics include:

- Managing Behavior: Start With Yourself
- Developing Activities That Have Meaning for Those Living With Dementia
- Humor and Caregiving
- Learning the Difference Between Letting Go and Giving Up

CE certification pending. Registration is required.

To register for this event, click the red button below.

PATIENT AND CAREGIVER STUDIES

SmartPrompt Electronic Reminder Aid to Improve Everyday Function in People With Dementia

What Is This Study About?

SmartPrompt is a smartphone application designed for older adults with difficulties remembering to do daily tasks because of cognitive impairment. In this study, older adults with mild dementia and their care partners will be trained to use SmartPrompt and then asked to use the application to perform a target task, such as drinking water, eating meals, or taking medications in their homes twice per day for two weeks. Researchers will

investigate whether the reminder application is effective in helping adults with dementia work around sensory and motor challenges to complete tasks.

Must have:

Participants With Dementia

- At least 65 years old
- Fluent in English
- Diagnosis of mild dementia
- Mild-level cognitive impairment as measured by a tool such as the Mini-Mental State Exam
- Availability of a caregiver

Caregivers

- 18 years or older
- Fluent in English
- Resides with or has daily contact with the person with dementia
- Cognitively healthy with no diagnosis of dementia or other major health problems that would stop them from providing reliable information and participating in the study

Must NOT have:

Participants With Dementia

- History of severe psychiatric disorder (e.g., schizophrenia and bipolar disorder) and/or nervous system infections or disorders (e.g., epilepsy, brain tumor, large-vessel stroke, and major head trauma)
- Major intellectual disability
- Current metabolic or systemic disorders (e.g., B12 deficiency, renal failure, and cancer)
- Severe sensory deficits, such as blindness or total hearing loss, that would interfere with viewing a smartphone or other everyday objects or with hearing the task directions
- Severe motor weakness that would not allow the use of a smartphone or other everyday objects (e.g., paralysis or severe deformities of both arms)

The Relationship Between Uncertainty Associated with Patient's Delirium and Psychological Distress Among Family Caregivers in the Intensive Care Unit

This research study is a part of a Ph.D. thesis project conducted by Amal Haji Assa, a Ph.D. student at The University of Tennessee Health Science Center, Memphis.

What is this study about?

This study is about family caregivers' experience and feelings when witnessing sudden cognitive and mental changes (known as delirium) in their loved ones during the ICU stay.

Who can participate?

- Adults 18 years or older

- Family caregiver of a patient who had been admitted to the ICU and had witnessed delirium symptoms on their loved ones during ICU stay.

Research Procedures:

This survey will take approximately 20-25 minutes to complete. You will have access to the survey link that will first ask you to determine if you are eligible to take the survey (screening form) and then to answer a series of questions regarding the following information:

1. General information about you such as your age.
2. Your loved one's general information.
3. Information about how you know about delirium in the ICU.
4. Information about how seeing delirium in your loved one affected you.

In appreciation for your participation and completion of the forms, you will be compensated for your time.

To learn more or sign up, contact Amal Haji Assa by clicking on the red button below.

Attachment and Burden in Caregiving of Dementia Patients

Researchers at Western Illinois University are interested in the experiences of home caregivers of persons with dementia. Specifically, they will be asking you about your daily stress and emotions.

The study includes an initial introduction session, which may be conducted via online video call (Zoom) or via phone call. Data will be collected through short online surveys.

To participate, you must be caring for a relative with dementia and you must be at least 18 years old. You also need an email account.

At the completion of the study, there will be a random drawing for VISA gift cards with a value of \$10.

To learn more or sign up, click on the red button below.

Home-Based Music Therapy for Mild Cognitive Impairment and Alzheimer's Disease

What Is This Study About?

Listening to music or singing songs may provide emotional and behavioral benefits for people with dementia. In this one-year study, researchers will evaluate the effects of home-based music therapy for people with mild cognitive impairment or Alzheimer's disease. If assigned to the treatment group, participants and their study partner will be asked to sing songs at home for at least one hour each day. In addition, some participants will meet with a music therapist several times over a six-month period. Every three months, the researchers will gather information from participants to track changes on cognitive function and quality of life. Screening and participation in this study can be completed in-person or remotely from home.

Do I Qualify To Participate in This Study?

Minimum Age: 55 Years

Maximum Age: N/A

Must have:

- Diagnosis of Alzheimer's disease or mild cognitive impairment
- Availability of a study partner to join music therapy sessions
- English speaking
- No verbal impairment
- Must have computer with a video camera or smart phone
-

Must NOT have:

- Diagnosis of dementia other than Alzheimer's disease
- Diagnosis of probable Alzheimer's disease with Down syndrome
- History of a clinically significant stroke with lasting effects on cognition
- Current evidence or history in past two years of epilepsy, focal brain lesion, or head injury
- Current diagnosis for a major psychiatric disorder including psychosis, major depression, bipolar disorder, alcohol or substance abuse
- Conditions causing disability that would interfere with study intervention such as pain or life expectancy less than one year
- Living in a nursing facility or other dementia care center
- Current participation in another research study

To learn more or sign up, contact Juliana Gamino, BFA, by clicking on the red button below.

**Online Support and Skills Training
for Dementia Caregivers**

Stress related to caregiving can lead to depression, anxiety, social isolation, financial strain, and health issues. This study will test the effectiveness of GamePlan4Care, an online education and skills training program for dementia caregivers, to reduce stress and caregiver burden and improve caregiver well-being. Participants will be randomly assigned to either the GamePlan4Care program or another online support program for six months. Participants will also be assigned to a dementia care specialist who will encourage engagement and follow up after the training with phone calls for a six-month period.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Provides at least eight hours, on average, of weekly care or supervision for a friend or family member with symptoms or a diagnosis of Alzheimer's disease or a related dementia
- Access to the internet at least three times per week, on average
- Lives within the Texas recruitment area in one of the following counties: Bastrop, Bell, Blanco, Burnet, Caldwell, Coryell, Fayette, Hamilton, Hays, Lampasas, Lee, Llano, Milam, Mills, San Saba, Travis, Williamson
- English-speaking

Must NOT have:

- Current participation in another caregiving study or evidence-based caregiver program
- Previous participation in any study designed to collect information for development of the GP4C program

To learn more or sign up, contact Alan Stevens, PhD, by clicking on the red button below.

Storytelling to Reduce Depression and Anxiety in Family Caregivers

This study will test whether the Caregiver Speaks storytelling program can reduce depression, anxiety, and grief intensity in bereavement in family caregivers of people with dementia. Participants will be randomly assigned to receive either usual hospice and support care or the Caregiver Speaks intervention. Those participating in Caregiver Speaks will share photos and have discussions with one another in a private, facilitated Facebook group. Researchers will use online surveys to collect information on participant depression and anxiety symptoms from the time of study enrollment up to six months after the death of their loved one.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Family member or friend providing unpaid care to a person living with dementia who is enrolled in hospice care
- Involved in hospice care decisions for the person with dementia
- Access to a digital camera or another photo-taking device such as a cell phone
- Willing to photograph images to capture caregiving and bereavement experiences
- Access to email to complete study surveys
- Willingness to set up a Facebook social media account and join the private

Must NOT have:

- None

To learn more or sign up, contact Debra Parker Oliver, PhD by clicking on the red button below.

Online Training for Dementia Caregiving in a Crisis

Crisis situations, such as the COVID-19 pandemic, add new stressors and challenges for dementia family caregivers. This study will evaluate the effectiveness of an online dementia caregiver training program to provide caregivers with the problem-solving skills needed to modify in-home dementia caregiving during a crisis, navigate a complex health care system, and reduce stress. Participants will be randomly assigned to either begin the study training program immediately or to be placed on a waitlist to begin the study training program eight weeks later. Researchers will use questionnaires and interviews to assess changes in caregiver skill mastery, emotional health (e.g., depression, anxiety), and the frequency and severity of care recipient behavioral problems.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Main caregiver for a family member or friend with a confirmed diagnosis of dementia
- Live at home with the person with dementia
- Access to a computer with internet service
- Can read and understand English

Must NOT have:

- None

FTD Disorders Registry

The Frontotemporal Degeneration (FTD) Disorders Registry is an online resource and database that securely collects information and stories from people affected by FTD to advance the science and development of FTD treatments. Anyone affected by FTD can join the registry, including people with an FTD diagnosis, as well as their family members, caregivers, and friends. After joining the registry, participants will receive emails about FTD including research updates and study opportunities.

Participation is open to anyone affected by FTD, including:

- People diagnosed with any type of FTD, including but not limited to behavioral variant FTD, any one of the primary progressive aphasia, progressive supranuclear palsy, corticobasal degeneration, or FTD with motor neuron disease
- Current and former caregivers of a person living with FTD
- Family and friends of a person living with FTD

Twitter-Based Support for Hispanic and Black Dementia Caregivers

This study will evaluate communications among anonymous followers of two Twitter social media accounts designed to provide community support for Black and Hispanic dementia caregivers. Study participants will be asked to follow and receive short messages from either the Black dementia caregiver group Twitter account or the Hispanic dementia caregiver group Twitter account based on their own identification with these groups. Participants will be required to use a Twitter account name that is anonymous and does not use their real name or photo. Researchers will assess changes in the discussion topics, as well as emotional and networking styles, including how users are communicating, supporting, and responding to others within their Twitter group.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Self-identify as a Black or Hispanic person
- Live in the United States, including the U.S. territories
- Caregiver for a family member or friend with dementia
- Able to speak English or Spanish
- Use a smartphone or a feature phone (i.e., a cell phone with text messaging)
- Agree to Twitter's terms and conditions of use, its privacy policy, and the rules for the dementia caregiver network

Must NOT have:

- Unwilling to use or create an anonymous Twitter account to use for study participation

To learn more or sign up, contact Sunmoo Yoon, PhD, by clicking on the red button below.

Beyond Listening: Music for Dementia Caregiving

This study will evaluate a home-based music program that uses singing, listening to music, and moving with music to lessen dementia symptoms, such as depression, and caregiver stress. Dementia caregivers will attend online training workshops that meet for one hour weekly for six weeks. Caregivers will use the music program with their person with dementia and report about their experiences in weekly diaries, a focus group, and questionnaires. Study participation is available online.

Must have:

Caregiver participants:

- Family member or close friend of a person with dementia
- Able to read and write in basic English

Dementia participants:

- Diagnosis of dementia
- Currently experiencing neuropsychiatric symptoms of dementia (e.g., agitation, restlessness, depressed mood, etc.)

Must NOT have:

- Diagnosis or history of mental illness
- Inadequate hearing even with the use of a hearing aid or other corrective device
- History of psychosis or other mental disorders other than depression
- History or presence of substance or alcohol abuse

To learn more or sign up for the study, contact Kendra Ray, PhD, by clicking on the red button below.

National Family Caregiving Strategy: A State Roadmap for Supporting Family Caregivers

One Strategy | Four Components

2022 National Strategy to Support Family Caregivers - An overview and description of the strategy's goals and intended outcomes.

Four Principles, Cross-Cutting Considerations for Family Caregiver Support - Describes the four key principles that must be reflected in all efforts to improve support to family caregivers.

Federal Actions - Nearly 70 actions that 15 federal agencies will take in the near term to begin to implement the strategy.

Actions for States, Communities, and Others - More than 150 actions others can take.

This webinar discusses the opportunities within the newly released National Family Caregiving Strategy and how it can provide a roadmap for states that are interested in developing and expanding supports for family caregivers. A federal official, state administrator, and philanthropic expert give an overview of the first-of-its-kind National

Family Caregiving Strategy and highlight how the state of Delaware is listening to family caregivers to better support their needs.

NASHP's RAISE Act Family Caregiver Resource and Dissemination Center hosted this webinar with generous support from The John A. Hartford Foundation and RRF Foundation for Aging.

Speakers include:

Wendy Fox-Grage (moderator)
Senior Policy Fellow, National Academy for State Health Policy

Scott Bane
Program Officer, The John A. Hartford Foundation

Greg Link
Director, Office of Supportive and Caregiver Services, US Administration for Community Living

Cindy Mercer
Chief Administrator, Planning, Policy, Program Development, Delaware Department of Health and Social Services

RESEARCH & RESOURCES

Just released: 2022 National Strategy to Support Family Caregivers

2022 National Strategy to Support Family Caregivers

The National Alliance for Caregiving – a coalition of 67 national organizations – applauds the release of the 2022 National Strategy to Support Family Caregivers developed by the U.S. Department of Health and Human Services but urges strong accountability and implementation efforts to turn the strategy into action.

The strategy details more than 350 federal actions and 150 measures that state and local governments, public health departments, philanthropies, and community-based, faith-based, and nonprofit organizations can take immediately to support the nation's 53 million family caregivers who make up 21% of the population.

The National Strategy includes potential government actions that address issues that family caregivers say are most important, including:

- 1) **Access to Respite Services**
- 2) **Support with Day-to-Day and Complex Medical Tasks**
- 3) **Inclusion of Caregivers in Care Teams**
- 4) **Financial Education on Caregiving Costs**
- 5) **Better Identification of Family Caregivers**
- 6) **Research on the Needs of Family Caregivers**

NAC was integral to mobilizing the caregiving community in support of the RAISE (Recognize, Assist, Include, Support, and Engage) Act, which established the council and process for developing the 2022 National Strategy to Support Family Caregivers. NAC also worked with The John A. Hartford Foundation and the National Academy for State Health Policy to ensure family caregivers were centered in the development of the recommendations and that the strategy reflected the lived experiences of this diverse community.

We encourage individuals and organizations to **provide public comment** on the National Strategy. The Strategy will be updated biennially, informed in part by public feedback, ensuring it continues to meet the needs of family caregivers and those they care for as they evolve.

Frequently Asked Questions About Palliative Care

Palliative care is specialized medical care for people living with a serious illness. Palliative care can be received at the same time as your treatment for your disease or condition. It focuses on providing relief from the symptoms and stress of serious illness. The palliative care team works to prevent or ease suffering, improve quality of life for both the patient and their family, and help patients and their families make difficult health care decisions. When a patient decides to forgo treatment for their serious illness or is near the end of life, they may decide to enter hospice care.

Vaccinations and Older Adults

When fall arrives, many of us know it’s time to get the annual flu, or influenza, shot. It’s also a good time to consider what other vaccines or boosters to get to protect your health.

Staying up to date on vaccines is especially important for older adults. Our immune system helps the body fight infection, but it gets weaker as we age. Vaccines help to strengthen the immune system.

Other vaccines that are important to older adults include COVID-19, pneumonia, shingles, and TDP (tetanus, diphtheria, and pertussis).

To learn more about vaccinations and older adults, click the red button below.

[LEARN MORE](#)

Hearing Loss and Older Adults

Hearing loss is a sudden or gradual decrease in how well you can hear. It is one of the most common conditions affecting older and elderly adults. Approximately one in three people between the ages of 65 and 74 has hearing loss and nearly half of those older than 75 have difficulty hearing. Having trouble hearing can make it hard to understand and follow a doctor's advice, to respond to warnings, and to hear doorbells and alarms. It can also make it hard to enjoy talking with friends and family. All of this can be frustrating, embarrassing, and even dangerous.

To learn more hearing loss, click the red button below.

Watch: How Alzheimer's Changes the Brain

How Biomarkers Help Diagnose Dementia

Biomarkers are measurable indicators of what's happening in the body. These can be found in blood, other body fluids, organs, and tissues. Some can even be measured digitally. Biomarkers can help doctors and researchers track healthy processes, diagnose diseases and other health conditions, monitor responses to medication, and identify health risks in a person. For example, an increased level of cholesterol in the blood is a biomarker for heart attack risk.

Before the early 2000s, the only sure way to know whether a person had [Alzheimer's disease or another form of dementia](#) was after death through autopsy. But thanks to advances in research, tests are now available to help doctors and researchers see biomarkers associated with dementia in a living person.

What Is Frontotemporal Dementia?

Frontotemporal dementia is caused by a group of disorders that gradually damage the brain's frontal and temporal lobes. These damages cause changes in thinking and behaviors. Symptoms can include unusual behaviors, emotional problems, trouble communicating, challenges with work, and difficulty with walking.

Frontotemporal dementia (FTD), sometimes called frontotemporal disorders, is rare and tends to occur at a younger age than other dementias. About 60% of people with frontotemporal dementia are 45 to 64 years old.

To learn more about FTD, click the red button below.

Preventing Falls at Home: Room by Room

Many falls happen at home, where we spend much of our time and tend to move around without thinking about our safety. There are many changes you can make to your home that will help prevent falls and better ensure your safety. Try these tips to reduce the risk of falling at home:

- Put automatic night lights in the bathroom and close to the bed.
- Mount grab bars near toilets and on both the inside and outside of the tub and shower.
- Make sure there is good lighting in stairways and hallways, with light switches at the top and bottom of stairs and on each end of a long hall.
- Keep electrical cords near walls and away from walking paths.

To learn more about fall prevention from the National Institute for Aging, click the red button below.

What Is Dementia? Symptoms, Types, and Diagnosis

Dementia is the loss of cognitive functioning — thinking, remembering, and reasoning — to such an extent that it interferes with a person's daily life and activities. Some people with dementia cannot control their emotions, and their personalities may change. Dementia ranges in severity from the mildest stage, when it is just beginning to affect a person's functioning, to the most severe stage, when the person must depend completely on others for basic activities of living.

Dementia is more common as people grow older (about one-third of all people age 85 or older may have some form of dementia) but it is not a normal part of aging. Many people live into their 90s and beyond without any signs of dementia.

Caring for People with Serious Illness

The COVID-19 pandemic has highlighted existing weaknesses in the United States health care system, while creating a new set of challenges related to caring for people with serious illness. The National Academy of Sciences, Engineering, and Medicine's Roundtable on Quality Care for People with Serious Illness hosted a three-part workshop to explore the initial responses to the pandemic by health care teams providing care to people with serious illness, the impact of the pandemic on the health care workforce, the use of telehealth, issues related to clearly communicating with the public about health emergencies, and policy opportunities to improve care for people with serious illness.

To view the workshops' results, click the red button below.

[VIEW THE RESULTS](#)

Alliance for Aging Research Mental Health Tips

More than 20 percent of older adults aged 60 and over suffer from a mental or neurological disorder. The most common neuropsychiatric conditions are dementia and depression, according to the World Health Organization. Substance-use disorders related to use of alcohol, illicit drugs, and prescription medications are increasing in prevalence among older adults, along with chronic pain issues that may complicate treatment access.

Individuals with Alzheimer's disease (AD) and other dementias are often not diagnosed, despite numerous benefits of early detection including time to explore treatment options and clinical trials, establish a care plan, develop support networks, and plan for the future. As their disease progresses, these patients experience changes in how they communicate as well as significant behavioral changes that can cause depression, anxiety, agitation, apathy, psychosis, and other neuropsychiatric symptoms.

The Alliance for Aging Research offers a variety of tips and information resources on its website for individuals facing these issues and those who care for them.

To learn more, click the red button below.

[LEARN MORE](#)

Assessing Changes in Memory and Function

If you do not see an aging friend or relative often, changes in his or her health may seem dramatic. In contrast, the primary caregiver might not notice such changes or realize that more help, medical treatment, or supervision is needed. Or, the primary caregiver might not want to accept the fact that the health of his or her spouse or parent is failing.

As a caregiver, you can provide support by helping an aging friend or relative get the care they need.

To learn more, click the red button below.

Cloudy Vision? It Could Be Cataracts

Your eyes are your windows to the world. If something clouds them, you may have trouble seeing well enough to read, drive, or do other daily activities.

One common cause of cloudy vision is cataracts. These form in the lens of your eye. Cataracts are a normal part of aging. They occur when proteins in the lens break down over time and clump together.

Midlife Cholesterol and Blood Sugar Levels May be Risk Factors for Alzheimer's Disease

Abnormal cholesterol and glucose (or blood sugar) levels as early as age 35 may be associated with Alzheimer's disease risk later in life. These findings, published in *Alzheimer's & Dementia*, suggest that people with normal cholesterol and glucose measurements in early through middle adulthood may be less likely to develop Alzheimer's as older adults. The study was led by NIA-funded researchers at the Boston University School of Medicine.

Social Stress Contributes to Accelerated Aging of the Immune System, Study Finds

Exposure to social stress was associated with accelerated aging of the immune system, according to an NIA-funded study recently published in PNAS. The body's immune system changes as people age, and there's large variability in these changes. The study, led by researchers at UCLA, investigated whether social stressors added to immune system decline.

IMPACT Lived Experience Panel Releases Two Reports on Research Study Outcomes and Ethics in ePCTs for PLWD and Their Care Partners

Reports from the first two series of meetings with the IMPACT Lived Experience Panel (LEP) are now available on the IMPACT website. The two reports share highlights and insights gained during meetings with the LEP facilitated by IMPACT's Patient Caregiver Relevant Outcomes Core and the Ethics and Regulation Core in the first cycle of the Lived Experience Panel. The LEP reflects a coordinated effort between the IMPACT Collaboratory and the Alzheimer's Association.

[The 2021-2022 Lived Experience Panel Report: Priorities for Person and Caregiver Relevant Outcomes in Dementia Intervention Research](#), by Antonia V. Bennett, PhD, Laura C. Hanson, MD, MPH, Gary Epstein-Lubow, MD, Sheryl Zimmerman, PhD, summarizes the discussions with the Lived Experience Panel and members from the Patient Caregiver Relevant Outcomes Core about research study outcomes that are important to people living with dementia and their care partners.

[The 2021-2022 Lived Experience Panel Report: Ethical Challenges in Conducting Research Using a Waiver of Informed Consent with People Living with Dementia](#), by Emily Largent, PhD, JD, RN, Jason Karlawish, MD Steve Joffe, MD, MPH, Gary Epstein-Lubow, MD, documents the insights gained from two meetings between members of IMPACT's Ethics and Regulation Core and the Lived Experience Panel, featuring conversations regarding the ethical challenges related to conducting embedded pragmatic clinical trials among people living with dementia and their care partners using waivers of informed consent.

Genetic Variant Linked to Parkinson's Found in Immune Cells

NIA researchers discovered that individuals with a DNA variant that has an effect only in an immune cell present in the brain, called microglia, have an increased risk of developing Parkinson's disease. Their study results, published July 27 in *Science Translational Medicine*, suggest scientists should consider cell type when examining possible causes of Parkinson's and other neurodegenerative disorders.

Healthy Meal Planning: Tips for Older Adults

Answering the question "what should I eat?" doesn't need to leave you feeling baffled and frustrated. In fact, when you have the right information and motivation, you can feel good about making healthy choices. Simple adjustments can go a long way toward building a healthier eating pattern.

Click the red button below for tips to plan healthy and delicious meals.

TIPS ON HEALTHY MEAL PLANNING

How Older Adults Can Get Started with Exercise

Deciding to become physically active can be one of the best things you can do for your health. Exercise and physical activity are not only great for your mental and physical health, but they can help keep you independent as you age.

Clinical Research: Frequently Asked Questions

Many people like the idea of participating in clinical research studies but are reluctant to join a trial due to misinformation or past clinical trial history. When you join a study or trial, you may help researchers discover new ways to diagnose, treat, and prevent Alzheimer's disease and related dementias.

Alzheimers.gov has published answers to 12 common questions regarding participation in clinical trials. To view them and learn more about this topic, click the red button below.

CARING FOR CAREGIVERS TRAINING

REQUEST A
TRAINING

"This was an amazing training. It helped me see better ways to communicate with caregivers in diverse families" - Training Participant

[BIT.LY/DECCAREGIVINGPAGE](https://bit.ly/deccaregivingpage)

Caring for Those Who Care: Meeting the Needs of Diverse Family Caregivers

The Diverse Elders Coalition's training curriculum, "**Caring For Those Who Care**" is a resource for health, social service providers, and aging professionals to learn about the unique needs of diverse family caregivers. The training curriculum will equip professionals with insights into the lived experiences of the following caregiving communities: African American and Black Caregivers, American Indian and Alaska Native Caregivers, Chinese American and Korean American Caregivers, Southeast Asian American Caregivers, Hispanic and Latino Caregivers, and LGBTQ+ Caregivers.

Training Details

- 90-minute individual or 6-part series virtual training hosted over Zoom
- Learn culturally-affirming best practices for caregivers on the provider, organizational, communications and policy levels
- Sliding Scale Fee Structure
- Interactive training tailored to your organization

If you have questions, please email Training@diverseelders.org.

Healthy Aging Tips for the Older Adults in Your Life

If you have older family members or loved ones, you may worry about their health as they age. Aging increases the risk of chronic diseases such as heart disease, type 2 diabetes, arthritis, cancer, and dementia. The good news is that adopting and maintaining a few key behaviors can help older adults live longer, healthier lives. As a family member, it's important to encourage healthy lifestyle behaviors in your loved ones — it's never too late to start!

Pain and Older Adult

Pain is a signal that something may be wrong in your body. You've probably been in pain at one time or another but found that it often goes away as the body heals or with treatment. However, many older people may have ongoing pain from health problems like arthritis, diabetes, shingles, or cancer.

A few things you can do to help manage your pain and feel better are:

- Keep a healthy weight. Being overweight can slow healing and make some pain worse. A healthy weight might help with pain in the knees, back, hips, or feet.
- Be physically active. Pain might make you inactive, which can lead to more pain and loss of function. Activity can help.
- Get enough sleep. It can reduce pain sensitivity, help healing, and improve your mood.

The National Institute for Aging has released an informative booklet discussing different aspects of pain experienced by older adults. To view the booklet, click the red button below.

Early-Stage Partners in Care

Early-Stage Partners in Care, EPIC, is one of more than 40 dementia caregiving programs found in Best Practice Caregiving (bpc.caregiver.org), a free, online database that helps organizations identify, compare and adopt best-fit programs for their clients and community. EPIC is proven, vetted and ready to implement.

Under the Hood: Best Practice Caregiving's Compare Feature

The Compare feature is one of the most deceptively simple (yet robust) functions of the **Best Practice Caregiving** site. In designing the database, the project developers — all experts in the caregiving and aging space — knew this feature was a must-have.

The Compare feature lets you compare up to three programs of like purpose or similar outcome. As you go through the database, searching for a perfect-fit program, you can check the ones (up to 3) that look promising. Then, compare them side by side, using the at-a-glance view that helps you narrow your choices, highlight differences and prioritize program characteristics.

Loss of Smell Linked to Alzheimer’s Cognitive Impairment and Biomarkers

Decline in sense of smell is connected to faster buildup of Alzheimer’s disease-related pathology seen in brain scans, according to new research focused on older adults who live outside of nursing homes. The findings provide additional evidence that loss of smell (known as anosmia) is a key early sign of Alzheimer’s-related cognitive impairment and the accumulation of associated harmful proteins, such as amyloid-beta and tau. The research, led by NIA scientists, was published in the Journal of Alzheimer’s Disease.

Decline in sense of smell had previously been confirmed as an early warning sign for Alzheimer’s in both human and animal studies, but its connection to the uptick of dementia-related brain imaging biomarkers over time had not been as closely studied in larger populations of older adults. For this study, the team tracked 364 participants from the Baltimore Longitudinal Study of Aging (BLSA) over an average period of about 2.5 years. The NIA-led BLSA is the longest running study of healthy aging in America.

“You’re Not Alone” Videos Shine a Light on Family Caregiving for ALS, MS, Parkinson’s, and Huntington’s Diseases

“If you’re looking for guidance on how to care for someone with a neurodegenerative disease, there’s not a lot out there,” says Leah Eskenazi, Operations Director at Family Caregiver Alliance of San Francisco. “Not only is there a shortage of information, there’s so much to learn—about treatment options, care planning, what’s covered by Medicare... the list goes on.”

Eskenazi wanted to address this need for caregivers, so she led a team at FCA to create “You’re Not Alone,” a four-part video series on caregiving for individuals diagnosed with a neurodegenerative disease.

“With ‘You’re Not Alone,’” says Eskenazi, “we packed need-to-know information about family caregiving for each disorder in one video.” There’s guidance for every stage of each disease, along with essential resources and recommended contacts you’ll need along the way.

In each “You’re Not Alone” video, caregivers learn what to expect, how to prepare for their role, essential legal and financial preparations, and much more. The videos are accompanied by fact sheets and essential resources guides.

CANCERcare®

Research on Cancer Caregivers and Decision-Making

Caregivers are the unsung heroes in cancer care. They may be spouses, family members, or close friends. They are not paid and are usually not trained to provide cancer care, yet they often become the lifeline for a person with cancer.

Caregivers are faced with information needs as soon as their loved one is diagnosed, when they immediately become immersed in helping to make medical choices for which they are typically ill prepared. The weight of treatment decision-making involves significant logistical, physical, emotional, financial, and professional consequences. The challenges that cancer caregivers face are often exacerbated by a lack of information and knowledge sufficient to make sound medical and treatment decisions. In fact, recent studies, including ours, indicated that 30-40% need more information when they are in decision-making roles.

CancerCare has presented a white paper, **Caregiver Treatment Decision-Making**, that is based on a series of focus groups among CancerCare social workers and cancer caregivers. It explores the various ways caregivers participate in decision-making, their uncertainty and the lack of support they receive from clinicians.

Cancer Caregivers: National Research Report on Shared Treatment Decision-Making is a broad and deep exploration of shared decision-making dynamics, challenges and needs. It is based on the survey responses from a nationally representative sample of 2,700 unique cancer caregivers, and indicates that most need more information in order to more effectively share in making these very important decisions. It also shows that many of them are dissatisfied with the educational materials provided by the care team. The detailed data and analyses identify the scenarios that caregivers find particularly perplexing and why. We learn what exacerbates their distress and their opinions regarding resources and programs that could help them as they strive to provide the very best care. It provides enlightening findings regarding Hispanic vs. non-Hispanic caregivers, and identifies a psycho-social segmentation scheme that helps us understand the specific challenges and needs of each group.
