

THIS WEEK IN CAREGIVING

August 23, 2023

CAREGIVING IN THE NEWS

Transcript: Chasing Cancer: "The Big C"

MS. STEAD SELLERS: Hello, and welcome to Washington Post Live. I'm Frances Stead Sellers, a senior writer here at The Post.

For the second part of our conversation, I'm going to be talking with Jason Resendez. He is the president of the National Alliance for Caregiving. Jason Resendez, a very warm welcome to Washington Post Live.

MR. RESENDEZ: Thanks, Frances. I'm excited to be here.

These days, caregiving is something that connects so many of us. There are 53 million Americans providing unpaid care in this country. Over 4 million are providing care for someone living with cancer.

The Care for Givers: Dementia Caregivers Face Burdens

Caregiving can be mentally, emotionally and physically exhausting.

Tifton, Ga., resident Kim Blackstock knows the struggle all too well. She was the primary caregiver for her late grandmother, Geraldine Patrick.

Patrick was diagnosed with dementia approximately six years prior to her 2012 death, though Blackstock said she began noticing changes and symptoms in 2003, after the death of Patrick's husband.

Blackstock said her grandmother said and did things that were foreign to her, like name-

How AI Could Help Home Caregivers

A growing aging population is on the horizon, as countries around the world from Japan to the US will need to find ways to support more older people than ever before. Crowded nursing homes and staffing shortages leave much to be desired in terms of where and how to grow old. The future of home care and independent living may lie in an alternative: AI.

"The future of healthcare is in the home and is going to be very personal," said David Moss, CEO and co-founder of Care Daily, a white-label B2B AI SaaS (software as a service) company powering large healthcare companies

calling and accusing her of stealing. She recalled it as a very painful experience, and it was difficult not to take the “insults” personally.

Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups

[DOWNLOAD NOW](#)

Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups

The National Alliance for Caregiving (NAC) has released a new publication to assist patient advocacy groups in their efforts to support diverse family caregivers. Through research with professional patient advocacy group representatives and diverse family caregivers in the condition areas of lung cancer, heart disease, blood cancer and lupus, *Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups* addresses the impact of culture and identity on the way that family caregivers provide care, and introduces ways in which patient advocacy groups can support their caregiving experience through culturally responsive resources and supports. The number of diverse family caregivers in the United States is growing yearly, and their aggregate number will soon surpass non-Hispanic white, non-LGBTQ+ caregivers. This guide was created with support from AstraZeneca.

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. [Assessing the Pain of Care Recipients: Tools Available to Family Caregivers](#) utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

NAC Releases New Report: Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America's 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it's needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC's report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

EVENTS & OPPORTUNITIES

AUGUST

Relationships, Family, and Mental Health

August 23, 2023 | 11:00 AM - 12:00 PM ET | Online

The complicated nature of mental illnesses can make relationships challenging, and caregiver stress — the emotional and physical stress of caregiving — is common. Learn

strategies to set boundaries, respond to difficult behavior, and manage your own stress in this one-hour webinar with a licensed therapist.

Fine print: Certificates of attendance are provided at no cost. CEUs are not provided. Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.

About the instructor: Jaymi Dormaier is a Licensed Master Social Worker with ten years of experience in the mental health field. In Jaymi's career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction. She is passionate about helping others live a life they love.

To register for this event, click the red button below.

Effective Communication Strategies

August 23, 2023 | 7:00 PM - 8:00 PM ET | Online

Communication is more than just talking and listening – it's also about sending and receiving messages through attitude, tone of voice, facial expressions and body language. As people with Alzheimer's disease and other dementias progress in their journey and the ability to use words is lost, families need new ways to connect.

Join the Alzheimer's Association on August 23rd for a presentation that will explore how communication takes place when someone has Alzheimer's, learn to decode the verbal and behavioral messages delivered by someone with dementia, and identify strategies to help you connect and communicate at each stage of the disease. The Effective Communication Strategies program of the Alzheimer's Association was designed to provide practical information and resources to help dementia caregivers learn to decode verbal and behavioral messages from people with dementia.

Coping with Emotions of Caregiving

August 23, 2023 | 9:00 PM - 10:00 PM ET | Online

Caring for others is filled with many mixed and varied emotions such as feelings of love,

loss, anger, affection, sadness, frustration, and guilt. It's not uncommon for family caregivers to feel lonely and isolated. It takes a lot of physical, mental, spiritual, and emotional energy to care for a loved one. Caregivers often experience a higher rate of stress, anxiety, and depression than those who aren't caregivers.

Join the Family Caregiver Alliance on August 23rd for a class that will explore these emotions and learn about ways to help cope and manage them.

To register for this event, click the red button below.

REGISTER

CONFIDENCE Financial Education Program

Thursdays, August 24, - September 21, 2023 | 5:00 PM - 7:00 PM ET | Online

Join the University of Southern California Family Caregiver Support Program for a virtual program designed to help Latino and Hispanic family caregivers to persons living with Alzheimer's disease or a related dementia lower the out-of-pocket costs of caregiving. Over 5 weeks, caregivers will meet virtually and gather in group sessions led by trained facilitators to discuss: how to navigate community resources, strategies for seeking help, how to balance employment and caregiving, and more!

To register for this event, click the red button below.

REGISTER

Release a Worry with a Family Emergency Plan

August 25, 2023 | 1:00 PM - 2:00 PM ET | Online

When you care for a family member, making plans can feel impossible. Even worse, making back-up plans feels completely out of the question. Consider two stats:

- 49% of survey respondents say they receive no help from family members.
- 74% say they do not have a back-up or a trained back-up to provide care in their absence if they become ill, have an emergency or want to take a vacation.

With the direct care workforce shortage, planning becomes even more important.

Join The Caregiving Years Training Academy on August 25th for a 50-minute planning session to create the plans you need to connect with Denise M. Brown, who has been supporting those who care for 30 years and Certified Caregiving Consultants (CCC).

The agenda for this webinar includes:

- 15-minute overview with Denise Brown
- Small group discussions with a CCC
- Wrap-up

What to Know about the New Treatment

for Alzheimer's Disease

August 29, 2023 | 11:00 AM - 12:00 PM ET | Online

The FDA recently approved a second treatment that addresses the underlying biology of Alzheimer's and changes the course of the disease for people in the early stages. Join WellMed Charitable Foundation on August 29th for an online program that will explore what is known about this new treatment – Leqembi: how it works, what it does, how much it costs, where to get it — and answering all your questions!

To register for this event, click the red button below.

REGISTER

Creating an End-of-Life Plan

August 29, 2023 | 11:30 AM - 1:00 PM ET | Online

Thinking and talking about your final wishes can be tough. But doing the work of deciding, discussing, documenting and sharing those wishes with your loved ones can provide peace of mind for everyone. Getting the practical side of your affairs in order will unburden your loved ones from having to make difficult decisions as they grieve.

Join AARP on August 29th for a webinar that will show you how to:

- Plan and document your wishes in case of medical or other emergencies
- Track important medical and insurance information
- Store key information on property, vehicles and non-financial assets
- Document what you have and what you owe
- Make the "unseen" visible by creating a digital estate plan
- Express your final wishes for how you'd like to be remembered
- Provide grief support to your loved ones before and after your death
- Store and digitally access all your final wishes documents

To register for this event, click the red button below.

REGISTER

Virtual Ask the Expert: Estate Planning, Probate or Long Term Care Planning

August 29, 2023 | 2:00 PM - 3:00 PM ET | Online

Do you have questions about estate planning, probate or long term care planning? Maybe you've wondered if estate planning is only for the very wealthy?

Join the Alzheimer's Association on August 29th to learn tips for managing someone else's finances, how to prepare for future care costs and the benefits of early planning. This event will feature Nick Maggard, an estate planning and elder law attorney.

Please note that Nick cannot provide legal advice but informational guidance only. You can submit your questions when registering, but we can't guarantee that every one will be answered. A second program will be in November. This will not be recorded.

To register for this event, click the red button below.

Memory Connections: Helping Families Navigate Their Dementia Journey with a Menu of Program Options

August 29, 2023 | 3:00 PM - 4:00 PM ET | Online

The National Alzheimer's and Dementia Resource Center (NADRC) is holding a webinar on August 29th, "Memory Connections: Helping Families Navigate Their Dementia Journey with a Menu of Program Options." Participants will learn how Senior Services Inc. and their partners Novant Health, Atrium Health Sticht Center, Winston-Salem State University Occupational Therapy Department and the Maya Angelou Center for Health Equity are working together to create a unique continuum of dementia care. Presenters will highlight the Maya Angelou Center for Health Equity's Caregiver College, a week-long program that educates African Americans about Alzheimer's disease and related dementias. Caregiver College graduates apply their newly acquired knowledge by delivering presentations to their social groups, churches, family members, friends and business connections.

SEPTEMBER

Care Essentials for Care Partners Workshops

Tuesdays, September 5 - September 26, 2023 | 6:30 PM - 8:30 PM ET | Online

Join the Alzheimer Society of Durham Region (Canada) on September 5th for a four-part series that will provide family and friends of persons living with dementia an opportunity to explore approaches to care in an interactive and supportive atmosphere. Each session features a workbook and helpful resources.

Week 1: Care Essentials: What to Expect (September 5th)

First in our four-part series, this session will provide an overview of the progression and symptoms of dementia and discuss how you can support remaining abilities for the person living with dementia.

Week 2: Care Essentials: Communicating Effectively (September 12th)
Second in our four-part series, this session explores communication changes in dementia and strategies for effective communication.

Week 3: Care Essentials: Responding to Behaviour (September 19th)

Third in our four-part series, this session will explore whole person care, behavior changes and how to use problem solving solutions in your caregiving journey.

Week 4: Care Essentials: Supporting Daily Activities (September 26th)

Fourth in our four-part series, this session will help care partners explore meaningful activities, ways to support daily living and will discuss local resources available.

This session will be hosted on Zoom (with a phone in options)

Zoom session: Once you have registered for the session, you will receive a link with instructions on how to connect.

Driving Safety for Older Adults

September 6, 2023 | 1:00 PM - 2:00 PM ET | Online

The topic of driving is often one that involves a lot of emotions. For many, driving equates to independence and the freedom to go when and where you want. As a person ages, it can be helpful to openly communicate about driving abilities and safety, rather than doing so due to a crisis such as a crash or a “close call.” Families often turn to professionals for guidance and insights on how to talk about driving and the best approach to taking away the keys.

Join the American Society on Aging on September 6th for a webinar to learn about the importance of developing a plan to help older adults move out of the driver's seat when necessary, while still remaining engaged with friends, family and community.

Participants in this webinar will be able to:

- Identify potential signs an older adult might be an unsafe driver
- Understand some common conditions and aging-related diseases that can affect driving
- Learn the best approaches to develop a plan to transition out of driving before a crisis occurs
- Discover tips to help reduce the potential for isolation and depression after an older adult stops driving

To register for this event, click the red button below.

Public Benefits for Older Adults: Supplement Your Income and Reduce Expenses

September 6, 2023 | 2:00 PM - 3:00 PM ET | Online

Join AARP on September 6th for an online session that will show how you or a loved one can access supplemental income programs for seniors with financial need and decrease out-of-pocket spending by securing other benefits, discounts and refunds. The following benefit programs and their eligibility requirements will be covered:

- Supplemental Nutrition Assistance Program, which provides grocery benefits to families in need
- Affordable Connectivity Program, which provides assistance with broadband costs
- Low-Income Home Energy Assistance Program, which helps with heating and cooling bills
- Medicare Savings Programs and the Medicare Extra Help Plan, which offset the costs of Part A, Part B and Part D coverage.

Successful Public Health Approaches in Dementia Caregiving: A Virtual Roundtable Series - Tennessee

September 8, 2023 | 11:00 AM - 12:00 PM ET | Online

Join the Public Health Center of Excellence on Dementia Caregiving (PHCOE-DC) on September 8th for the Tennessee episode of the "Successful Public Health Approaches in Dementia Caregiving" series. Attendees will hear from Chelsea Ridley, MPH, RN and Keita Cole, CRS-A/D, CVA about dementia caregiving initiatives in their state, and have the chance to engage in a discussion during the Q&A portion of the event.

This is the sixth event of a bi-monthly, roundtable series showcasing innovative, state-wide public health approaches for supporting dementia caregivers. The goal of this series is to create a public health community of practice, where agencies can share experiences and lessons learned, and find ideas of strategies they can implement to support dementia caregivers in their jurisdictions.

To register for this event, click the red button below.

Plan Your Respite In Place Space

September 12, 2023 | 1:00 PM - 2:00 PM ET | Online

When you care for a family member, you may find it difficult to get a break. You may struggle to find and hire help. You may need to be close by because of a caree's complex care needs. You may not have family members who can help.

When you can't leave, we'll help you get a break right where you are. We'll help you create a Respite In Place plan so you can create a space to call your own in your home, your yard and your community.

Denise M. Brown, who helps her parents, will lead the discussion. Denise began supporting those who care for a family member in 1990.

Understanding and Responding to Dementia-Related Behavior

September 13, 2023 | 1:30 PM - 3:00 PM ET | Online

Behavior is a powerful form of communication and is one of the primary ways for people with dementia to communicate their needs and feelings as the ability to use language is lost. However, some behaviors can present real challenges for caregivers to manage. Join the Alzheimer's Association on September 13th to learn to decode behavioral messages, identify common behavior triggers, and learn strategies to help intervene with some of the most common behavioral challenges of Alzheimer's disease.

**TOOLS
& TIPS FOR
CAREGIVERS**

Tools and Tips for Caregivers

September 13, 2023 | 7:00 PM - 8:00 PM ET | Online

Between aging, the impacts of long COVID, accidents, and a myriad of other causes, the need for a caregiver can arise at any moment.

Join Westchester Community Foundation executive director Laura Rossi in conversation with Moira Laidlaw, Esq., of Hollis Laidlaw & Simon, P.C. and Michael Picon, author of *The Caregiver's Notebook*, to learn more about the ins-and-outs of caregiving for a loved one. You'll gain an understanding of the scope of caregiving and resources available, learn about healthcare and legal systems that caregivers navigate, and receive practical tools to decrease stress and get support.

This event is open to the general public and is ideal for family and chosen family members currently, or interested in, supporting others.

Create a Plan for Recovery During Caregiving

September 19, 2023 | 1:00 PM - 2:00 PM ET | Online

After an intense period, like a hospitalization or decline, you and your caree deserve a Recovery Plan. The plan gives you a period of time after the crisis for your mind, body and spirit to recover. In addition, you can plan for how your caree will recover by considering a new routine and adding help.

Connect with Denise M. Brown to create your plan. Denise began helping family caregivers in 1990 and began helping her parents in 2004.

Hearing and Balance Disorders in Older Adults

September 28, 2023 | 1:00 PM - 2:00 PM ET | Online

Hearing loss and balance disorders increase with age. But did you know hearing and balance degenerate independently? This means they should be evaluated separately.

Join the American Society on Aging on September 28th for an overview of hearing loss and balance disorders in older adults, including signs, symptoms and treatment options to help improve quality of life. The discussion covers tips to assess the conditions and effective communication strategies to integrate into your care setting.

Participants in this webinar will be able to:

- Identify common symptoms of hearing loss and cite treatment options.
- Demonstrate and explain strategies for improving communication with older adults.
- Identify signs/symptoms/effects of balance loss.
- List treatment options for balance loss.

To register for this event, click the red button below.

Smoking and Dementia

October 18, 2023 | 1:00 PM - 2:00 PM ET | Online

Smoking can affect nearly every organ of the body, leading to diseases such as cancer, stroke, heart disease, and lung diseases. In fact, it is among the top risk factors for dementia. Join the American Society on Aging on October 18th for a course that will provide strategies and resources to address smoking and build cognitive resilience.

Participants in this webinar will be able to:

- List 6 or more modifiable risk factors for dementia.
- Summarize the link between smoking and dementia.
- Identify effective interventions and strategies to address smoking.
- Identify special considerations for high-risk populations.

***Finally!
A Health and
Financial Conference
to Give Caregivers a
Crisis-Resistant Plan
to Care For Them and
Their Loved Ones***

Nov. 8-9, 2023

Health & Financial Conference: Crisis-Resistant Plan for Caregivers

November 8th - 9th, 2023 | 3:00 PM - 4:30 PM ET | Online

This conference is designed for individuals 10-15 years away from retirement who are caring for aging loved ones. It highlights the significant role caregivers play as financial and medical resources for their loved ones. The conference addresses the caregiver's dilemma, where they face uncertainty about their loved one's circumstances and fear

receiving distressing calls or arriving to find no response. Many loved ones wish to live independently without additional help, creating a slow-motion train wreck scenario.

The conference aims to provide caregivers with essential information to make informed care decisions, avoid financial losses, improve family communication, and ensure proper care for their loved ones. Attendees will find resources and support to manage their caregiving responsibilities and personal well-being effectively.

PATIENT AND CAREGIVER STUDIES

Diabetes Management for African Americans with Mild Cognitive Impairment

Who is sponsoring this study? Thomas Jefferson University

Where is this study located? Pennsylvania

Start: October 25, 2021

End: January 2025

Enrollment: 200

What is this study about?

This study will explore whether a behavioral treatment program for people with diabetes, called DREAM, can improve memory for African Americans with both poorly controlled diabetes and mild cognitive impairment (MCI). Participants will be randomly assigned to complete the DREAM program or a different home-based diabetes education. Over two years, all participants will have 11 in-home visits with a community health worker who will provide information on diabetes management. Participants in the DREAM program group will also receive four telehealth visits with a diabetes nurse educator. Every six months, all participants will complete memory tests, give blood, and undergo an eye exam. Researchers will use results from these tests to evaluate any changes in cognitive impairment and diabetes management.

Do I qualify to participate in this study?

Minimum Age: 65 Years

Maximum Age: N/A

Must have:

- African American or Black ancestry
- Diagnosis of MCI
- Type 2 diabetes for at least one year before starting study, with:
 - Blood A1C > 7.5

Must NOT have:

- Diagnosis of dementia
- Any medical illness or condition that could interfere with the study
- Any serious psychiatric disorder that could interfere with the study
- Life expectancy less than two years

To learn more or participate in this study, click the red button below.

Sleep Quality and Alzheimer's Disease Risk

Who is sponsoring this study? University of Pittsburgh

Where is this study located? Pennsylvania

Start: January 3, 2022

End: May 2026

Enrollment: 116

What is this study about?

This study will examine whether improving sleep quality can improve cognitive function and reduce the amyloid deposits associated with the development of Alzheimer's disease. A preliminary study suggests that reducing the total time older adults spend in bed each day improves overall sleep quality by helping them fall asleep quicker and sleep more deeply. Participants will be randomly assigned to a regular sleep schedule that either reduces their total amount of time in bed by 15% or maintains their usual amount of time in bed. All participants will keep a sleep diary and wear a device to track their sleep and activity. They will also provide blood samples to screen for amyloid and test for the APOE gene associated with Alzheimer's disease risk. Researchers will measure changes in amyloid levels, brain activity using an electroencephalogram and MRI, memory and cognitive function, and sleep quality after four weeks as compared to the start of the study.

Do I qualify to participate in this study?

Minimum Age: 65 Years

Maximum Age: 85 Years

Must have:

- Low sleep efficiency (a significant time awake before falling sleep and/or waking up frequently during sleep) based on information gathered by an activity tracking device and in a sleep diary
- Normal or corrected-to-normal vision and hearing

Must NOT have:

- Diagnosis of Alzheimer's disease
- Evidence of a sleep breathing disorder with an Apnea-Hypopnea Index score > 15
- Current severe psychiatric condition (e.g., major depressive disorder, panic disorder) or a lifetime history of a psychotic disorder or bipolar disorder
- Any chronic medical condition or current medication that affects sleep (e.g., antidepressants, antipsychotic medications, anticonvulsants, steroids, sedatives)
- Substance use or alcohol abuse within the past six months with consumption of > 14 alcohol drinks per week or > six drinks at a single sitting
- Consumption of more than three caffeine drinks per day
- Prior diagnosis of a central nervous system disease (e.g., multiple sclerosis, stroke, Parkinson's disease, Alzheimer's disease, seizure disorder, delirium, or dementia)
- History of a loss of consciousness for more than 24 hours or traumatic brain injury
- Currently doing shift work involving night shift or regular work within the hours of 12am and 6am
- History of sleepiness while driving with a near-miss or prior automobile accident "due to sleepiness" within the past year

- Employed as a commercial driver during the study (e.g., truck or bus drivers, train engineers, airplane pilots)
- Impaired decision-making with a Telephone Interview for Cognitive Status score below 23
- Any condition that would make having an MRI unsafe (e.g., metal in the body, cardiac pacemaker, severe claustrophobia, morbid obesity, epilepsy)

Training for Optimal Routines in Mild Cognitive Impairment

Who is sponsoring this study? University of Pittsburgh

Where is this study located? Pennsylvania

Start: July 2019

End: July 2025

Enrollment: 150

What is this study about?

This study will test the effects of strategy training compared to enhanced usual care in older adults with mild cognitive impairment (MCI). It is designed to engage people in meaningful daily activities through generating self-selected goals, monitoring daily activities, scheduling activities, and finding solutions to barriers. Researchers are investigating the training as a way to slow the emergence of disability and keep people engaged in meaningful daily activities for as long as possible. Participants assigned to the study intervention will engage in 10 one-hour sessions in their home over five weeks with a trained research interventionist. Participants in the comparison group will receive their usual care and will also be connected to additional resources to meet their needs.

Do I qualify to participate in this study?

Minimum Age: 60 Years

Maximum Age: N/A

Must have:

- Diagnosis of MCI
- Difficulty with a daily activity
- Community dwelling

Must NOT have:

- Pregnant
- Central nervous system disorder (other than MCI)
- Substance disorder in past five years
- Lifetime history of bipolar disorder, schizophrenia, or condition that could make it unsafe to proceed in the study (e.g., untreated major depressive disorder)
- Severe medical condition that limits engagement in daily activities

ENVISION: Effects of Aducanumab on Function in People with Early-Stage Alzheimer's Disease

Who is sponsoring this study? Biogen

Where is this study located? Multiple states

Start: June 2, 2022

End: October 2026

Enrollment: 1512

What is this study about?

This Phase 3b/4 clinical trial, named ENVISION, will evaluate whether monthly doses of aducanumab, an FDA-approved drug to treat Alzheimer's disease, can slow cognition and improve functioning in people with early-stage Alzheimer's. Participants will be randomly assigned to receive either aducanumab or a placebo, by intravenous injection, once a month for up to two years. Researchers will administer questionnaires and interviews to measure changes in cognition, behavioral, and movement symptoms. All participants will also undergo PET brain scans to measure changes in amyloid and tau, which are two proteins associated with Alzheimer's. All measures will be taken at the start of the study and again after 18 and 24 months.

Do I qualify to participate in this study?

Minimum Age: 60 Years

Maximum Age: 85 Years

Must have:

- Mild cognitive impairment or mild Alzheimer's dementia, with:
 - Mini-Mental State Examination score of 22 to 30
 - Clinical Dementia Rating memory score > 0.5 and global score of 0.5 or 1.0
 - Repeatable Battery for the Assessment of Neuropsychological Status score < 85
- Positive for beta-amyloid by cerebrospinal fluid analysis or PET brain scan
- History of memory decline with gradual onset and slow progression over the six months before study screening, as confirmed by a study partner
- Availability of a study partner who has frequent contact with the participant (at least 10 hours/week in person or by phone) to provide information about the participant's cognitive and functional abilities over time
- Overall good health, based on medical history and screening assessments
- Willing to undergo genetic testing for the APOE gene; participants are not required to be positive for APOE-4

Must NOT have:

- Any uncontrolled medical, neurological, or neurodegenerative condition (other than Alzheimer's) that could be a contributing cause of the participant's cognitive impairment
- Clinically significant and/or unstable psychiatric illness within the past six months prior to study screening
- Transient ischemic attack, stroke, or any unexplained loss of consciousness within the past year
- History of severe allergic reactions or hypersensitivity to any of the inactive ingredients in the study drug solution
- Prior exposure to aducanumab or any other potential disease-modifying drug for Alzheimer's, either commercially or by participation in a previous study within the

past year; participation in this study may be allowed if documentation is available showing that a placebo was received in the previous study

- Use of any medications that could contribute to cognitive impairment, increase the risk of study drug side effects, or impair the participant's ability to perform cognitive testing or complete study procedures

Navigation-Based Video Game to Improve Long-Term Memory

Who is sponsoring this study? University of California, San Francisco

Where is this study located? California

Start: June 1, 2023

End: May 31, 2025

Enrollment: 200

What is this study about?

This study tests the effectiveness of a cognitive video game to improve long-term memory for older adults. The video game engages users in a series of tasks that require navigation through a virtual environment. Participants will be randomly assigned to play the study video game either in a 3D virtual reality platform using head-mounted technology; on a tablet; or using a different, commercially available video game. Before and after the video gaming session, participants will complete memory and cognition tests and undergo an MRI brain scan.

Do I qualify to participate in this study?

Minimum Age: 60 Years

Maximum Age: 85 Years

Must have:

- Fluent in English
- At least a high school education
- Normal or corrected-to-normal vision (i.e., glasses or contact lenses allowed)
- Sufficient ability to comfortably operate the video game controls
- Physically able to complete brisk 30-minute walks, twice a week, on level ground

Must NOT have:

- Taking psychotropic medications
- History of concussions or dizziness, inner ear or balance problems
- Significant discomfort with virtual reality experiences
- Any conditions that may make having an MRI brain scan unsafe (e.g., metal shrapnel, pacemaker, severe claustrophobia, epilepsy)

UNICORN: Research Repository on Neurogenerative Disease

Who is sponsoring this study? University of Pennsylvania

Where is this study located? Pennsylvania

Start: May 29, 2020

End: May 2070

Enrollment: 1000

What is this study about?

This study will collect health information and biological samples from people over several years to create the University of Pennsylvania Centralized Observational Research Repository on Neurodegenerative Disease (UNICORN). The repository will make the samples and data available to qualified researchers to advance neurodegenerative disease research and treatments. Participants include people with neurodegenerative conditions, people at risk for neurodegenerative disease due to a family history, and healthy, unaffected adults. Researchers will collect clinical data such as vital signs (e.g., blood pressure, pulse), brain imaging scans, and biological samples (e.g., blood, cerebrospinal fluid, saliva) from participants at enrollment and over time.

Do I qualify to participate in this study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Clinical diagnosis of a neurodegenerative disease (e.g., frontotemporal degeneration, primary progressive aphasia, Lewy body disease, amyotrophic lateral sclerosis, progressive supranuclear palsy, corticobasal syndrome, posterior cortical atrophy, Alzheimer's disease, Parkinson's disease) OR
- Family history of neurodegenerative disease (may or may not have symptoms or genetic mutations associated with increased risk) OR
- Healthy adults with no known neurological disease

Must NOT have:

- Condition or situation that could interfere with research findings or with a person's participation, including but not limited to neurological, psychological, and other medical conditions (e.g., cardiac, neurosurgical, or infectious conditions)
- For safety reasons, participants may be excluded from some study procedures (e.g., participants with metal implants will not be able to take part in MRI brain imaging)

Defining a New Normalcy

If there is a common experience shared by nearly all caregivers, it is that things they once did routinely, sometimes on only a moment's notice, suddenly become difficult or even virtually impossible. Simple, everyday, normal things like running to the store, going to the movies, taking a spontaneous long walk or sleeping late in the morning all must give way to the demands and logistics of providing for their care recipients. In addition, caregivers often must perform tasks that are not part of the normal day for other people, doing such things as feeding a disabled teenager, changing the clothes of an incontinent parent or keeping a constant eye on an increasingly confused spouse.

But while normalcy is undoubtedly a casualty of caregiving, there are things that caregivers can do to restore some facets of a normal life to themselves and their family.

2023 Caring Report: Worst States to Die Without a Will

When thinking about and preparing for their financial future, many Americans stop short of one very important facet: estate planning. Caring.com's 2023 Estate Planning Study found that 2 out of 3 Americans do not have a will or any other type of estate planning document, with 42% of people saying they simply haven't gotten around to creating one.

Putting off estate planning may not seem like a big deal, but it can have serious ramifications for loved ones. When you die without a will, your heirs face a complicated court process, called probate, which can delay their inheritances by months or even years.

Collaboration Across the Age-Friendly Ecosystem

As the population ages, one of the most important ways to support older adult health is through multi-sector collaboration. Many sectors are now working to promote health and well-being across the life course, including Age-Friendly Health Systems, Age-Friendly Communities, Age-Friendly Public Health Systems, and the aging services network. This comprehensive age-friendly ecosystem ensures the availability and quality of community services and supports that can impact the lives of older adults including access to quality healthcare, affordable and accessible housing, age-friendly transportation options,

opportunities for social participation, and work and civic engagement.

This Age-Friendly Ecosystem map tool is designed to enhance partnerships within states by providing information about each of the age-friendly movements across the U.S. Although there are other age-friendly initiatives (e.g., Age-Friendly Universities and Dementia Friendly Communities).

Changes in Human Microbiome Precede Alzheimer's Cognitive Declines

In people with Alzheimer's disease, the underlying changes in the brain associated with dementia typically begin many years — or even decades — before a diagnosis. While pinpointing the exact causes of Alzheimer's remains a major research challenge, they likely involve a combination of genetic, environmental, and lifestyle factors. Now an NIH-funded study elucidates the role of another likely culprit that you may not have considered: the human gut microbiome, the trillions of diverse bacteria and other microbes that live primarily in our intestines.

A Guide to Walk-In Showers for the Elderly

According to a 2021 Home and Community Preferences Survey by AARP, 75% of people over age 50 plan to live in their current homes or communities for the rest of their lives. Aside from their unwillingness to move, older adults prefer aging in place as it allows them to retain their independence and is exponentially more affordable. However, one of the main concerns of aging in place is safety.

Unfortunately, most longtime homes cannot meet the seniors' needs or present safety hazards. Since seniors often struggle with mobility and balance, they have a higher risk for falls. According to the Centers of Disease and Prevention(CDC), falls are the leading cause of death, and non-fatal injuries among adults 65 years of age or older. This highlights the importance of home modifications to lower the risk of falls and make aging in place safer for seniors.

Prepared Caregivers: A Toolkit for Caregivers of Veterans for Disaster Preparedness

The Rosalynn Carter Institute for Caregivers has released a brand new toolkit to help caregivers of Veterans prepare for disasters. The toolkit, titled Prepared Caregivers: A Toolkit for Caregivers of Veterans for Disaster Preparedness, is the result of countless conversations with caregivers and emergency response personnel who all said the same thing: caregivers need support in order to be better prepared in emergencies.

Prepared Caregivers is made up of plans, advice, insight and conversation prompts for caregivers of Veterans, with customizable checklists designed to create a plan suited to caregivers' unique needs. Resources include but are not limited to:

- Explanations of key terms used in the preparedness sector but that are not commonly known

- A military-caregiver-specific emergency plan
- Checklists for caring for people with special needs, pets and service animals in an emergency
- Insight into how the physical and mental wounds of war may cause Veterans to experience disasters differently from other care recipients
- Strategies to help Veterans process their emotions in precarious situations
- Tips for service animals
- Month-by-month guides for assembling disaster kits
- Procedures for navigating life after a disaster

This guide is fully customizable to meet the unique needs of each military caregiver and is designed to be self-paced.

Dementia: Is This Dementia and What Does It Mean?

What comes to mind when you hear someone has dementia?

For many people, the term carries with it frightening associations. In fact, dementia is a

group of symptoms, personality changes, or unusual behavior. These can include:

- short-term memory loss
- confusion
- inability to problem-solve
- inability to complete multi-step activities (preparing a meal, or balancing a checkbook)

Saying that someone has dementia recognizes these changes in the person, but it says nothing about why they have these symptoms. It doesn't explain the cause.

Detecting Alzheimer's Disease: Older Adults' Experiences with Cognitive Screening & Blood Biomarker Testing

Over six million Americans have Alzheimer's disease (AD), the most common type of dementia, yet many of these individuals have not been formally diagnosed with the condition. Early detection of AD and related dementias has become an increasingly important public health priority. Cognitive screening (e.g., memory testing) is currently available to facilitate early recognition of cognitive impairment, while blood biomarker tests are an emerging option for detecting the abnormal buildup of proteins in the brain that might be an early sign of AD.

In March 2023, the University of Michigan National Poll on Healthy Aging asked a national sample of adults age 65–80 about their use and awareness of cognitive screening and blood biomarker testing, as well as their perceptions of the tests' benefits, limitations, and risks.

Duchenne Muscular Dystrophy: A Caregiver's Guide

People with Duchenne muscular dystrophy (DMD) require some level of caregiving throughout their whole lives, particularly as the disease progresses and patients become

less mobile and more reliant on assistive devices. It can feel like a monumental task, but being knowledgeable about the disease and its treatment and management and knowing where to go for support and resources can go a long way in ensuring caregivers are able to give their loved ones the best possible care and help them maintain their quality of life. The following articles can help DMD caregivers educate themselves, figure out next steps, and learn how to take time for themselves.

Heat Affects Older People More. Here's How to Stay Safe

We are experiencing the hottest days in history. Heat waves have blanketed the Northern Hemisphere this week, with temperatures reaching 100 degrees Fahrenheit on three continents.

Extreme heat can be deadly for anyone, but older adults are uniquely vulnerable. In the heat wave that suffocated Europe in the summer of 2022, people age 65 and older accounted for approximately 90 percent of heat-related deaths.

The Positive Aspects of Dementia Caregiving in Asian Communities

In the United States, Asian Americans represent more than 30 nationalities and ethnic groups, but they are typically categorized as Asian or AAPIs (Asian Americans and Pacific Islanders) for reporting.

Therefore, exploring the positive aspects of caregiving in the context of Asian communities is critical to developing a more robust understanding of dementia caregivers within this population.

According to research published in BMC Geriatrics, positive aspects of caregiving are significant coping resources for informal caregivers of people with dementia (PWD). The study revealed three major themes: positive aspects within the self, positive aspects between caregiver and PWD, and positive aspects between caregiver and others.

7 Stages of Dementia

The 7 Stages of Dementia: A Guide for Caregivers

Caring for someone with dementia can be a difficult, stressful process and a tough balance. On the one hand, you want to help them maintain as much independence as possible; on the other hand, you want to make sure they're safe and receive the care they require.

Alzheimer's disease and other types of dementia are often slow-progressing. It can take years before the symptoms of dementia fully develop and significantly impact the person's life. It can take even longer until they are no longer able to care for themselves and require full-time services. Fortunately, early detection of dementia symptoms followed by

treatment may be able to help slow down the disease's progression and may help your loved one retain their memory and cognitive abilities longer.
