When Parents Need Care, Sibling Relationships Face New Challenges

Caring for an aging parent can bring out the best -- and worst -- in siblings.

Millions of adult children provide unpaid care for their parents or in-laws. The workload and division of responsibilities often create tensions between brothers and sisters. Arrangements work best when siblings can divvy up tasks that play to each other's strengths. Even then, the stress of caring for parents and making financial decisions can cause rifts.

Supporting Navajo Caregivers: A Call to Action

Valerie Tsosie, a member of the Navajo Nation, started the So'Taoh Foundation (meaning big or North star in the Diné language) in August of 2020, offering resources and training to support Diné caregivers. The organization "utilizes an integrated Diné approach that takes into consideration the body, min and spirit connection."

Tsosie had been working as a caregiver resource specialist with the Navajo Nation Division of Aging and Long-Term Care Support, so she knew what caregivers needed.

Join the National Alliance for Caregiving for the release of their new guide, Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups. This guide provides information learned from diverse family caregivers on how their culture may affect their caregiving role and their interaction with caregiving resources, and provides guidance on how patient advocacy groups can reach diverse caregivers with culturally responsive support. At the webinar, NAC will go through some of their findings and the content of the guide itself.

Opening for an Associate Director of Policy & Advocacy Position with NAC

The National Alliance for Caregiving (NAC) has posted a job opening for an Associate Director of Policy & Advocacy position. The Associate Director will support NAC’s Advocacy Department with the aim to further NAC’s vision of a society that values, supports, and empowers family caregivers—drawing on NAC’s mission to build partnerships in research, advocacy, and innovation to make life better for family caregivers.

Interested applicants can email Mike Wittke, Vice President for Policy & Advocacy, at mike@caregiving.org or click the red button below.
The National Alliance for Caregiving Opens Phone Line for Family Caregivers to Talk About Their Mental Well-Being

Sponsored by Travere Therapeutics, the National Alliance for Caregiving is spearheading a project to advance the mental well-being of family caregivers in the United States. NAC wants to hear from family caregivers on the joys, challenges and struggles they’ve faced on their caregiving journey in order to better understand their needs and the supports and interventions that can be introduced to assist them.

If you're a family caregiver or have cared for someone in the past, call 1-888-665-2190 to share your caregiving story and the feelings associated with it.

If you would prefer to write out your response rather than leave an audio message, you may do so here.

We want to know:

• What joys have you experienced as a caregiver?
• How are you feeling about being a caregiver?
• What are challenges you have faced as a caregiver?
• What are concerns you have about providing care?

The message you leave will inform policy and practice efforts to improve support for family caregivers like you! All messages left will be anonymous, with only the transcript being used to help us advocate for change.

To learn more, click the red button below.
It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. *Assessing the Pain of Care Recipients: Tools Available to Family Caregivers* utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

To read the report, click the red button below.
The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America’s 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it’s needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC’s report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

**Global Voices of Caregiving: A PhotoVoice Project**

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn’t work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver’s own experience and tells a diverse story of what it’s like to care for others, an act which connects us all.

FEBRUARY

Dementia 101

February 22, 2023 | 1:00 PM - 2:00 PM ET | Online

Caring for someone living with dementia poses many unique challenges for family caregivers. This class will provide a basic understanding of dementia and how it affects an individual. It will also include some tips for caregivers on how to cope with these changes.

To register for this event, click the red button below.

Disparities in Dementia Care

February 22, 2023 | 2:00 PM - 3:00 PM ET | Online

Join AARP virtually for a thought-provoking session on inequities in dementia care and how care can be made more inclusive.

About the Event

Alzheimer’s disease and other forms of dementia disproportionately affect older Black and Hispanic Americans compared to older whites, according to the Alzheimer’s Association.

Dr. Carl V. Hill, chief diversity, equity, and inclusion officer for the Alzheimer’s Association, will discuss how recent research ties poor social determinants of health and health equity issues to disproportionate rates of dementia in minority populations. He’ll also examine the importance of diverse participants and perspectives in Alzheimer’s disease research – and what comes next to foster more inclusive research. There will be time for questions.

This event is being hosted by Insight Memory Care Center in Fairfax, Virginia, and will be offered in-person in Fairfax and online for virtual participation. You will be given the opportunity to select your attendance option.

Please do not opt out of event-related email, as you will be emailed a link to join the presentation prior to the event. Note that the information you provide on the host’s platform shall be governed by the host organization’s privacy policies.

Contact Melissa Long at melissa.long@insightmcc.org for more information.

Coping with Stress as a Caregiver

**Wednesdays, February 22 - March 8, 2023, 3:00 PM – 4:00 PM ET | Online**

It’s common for caregivers to sacrifice their own well-being while caring for others – and we’re here to help you prioritize yourself. While caregivers are often compassionate and giving individuals, we too need time for cultivating our own wellness. You’ve likely heard the saying before that “you cannot pour from an empty cup.” Taking care of ourselves and properly managing stress can help improve our lives – both in and out of our caregiving roles.

Join Lines for Life for a 4-part workshop series for caregivers focused on strategies for self-care and connecting with others to find support. This series began on February 15th.

Learn how to use the stress-mapping model to cope with stress, restore your well-being, and safeguard your passion for this work.

Sessions are held virtually on Wednesdays from 3:00 to 4:00 pm ET on the following dates:

February 22nd, March 1st & 8th

Topics Include:

*Balancing care for self with care for others
*Mapping early warning signs of stress
*Supporting one another with the implementation of self-care strategies

Yvette Garcia, M.A. has over 10 years of experience in supporting individuals to stay in touch with their personal “why” and bringing out the best in themselves while navigating the stressors of work and everyday life.

Introduction to PACE (Program of All-Inclusive Care for the Elderly) with On Lok

February 23, 2023 | 11:00 AM - 12:00 PM ET | Online

On Lok is the founder of the PACE (Program of All-Inclusive Care for the Elderly) model of care. Founded in 1971, On Lok began with an idea: Traditional models of care in San Francisco were not meeting the needs of the elderly. Seniors wanted to age at home, but they needed services to maintain their independence. Dr. William L. Gee and social worker Marie-Louise Ansak joined forces to create a program that would enable older adults to continue living in their community. Propelled by their drive and vision, On Lok founded the Program of All-Inclusive Care for the Elderly (PACE).

On Lok continues to build on its history and expertise in both creating innovative models of care and serving diverse senior communities through integrated health and social services as a trusted partner in its communities. Today, On Lok cares for over 1,600 frail seniors in the San Francisco Bay Area, and the PACE model has been replicated in 32 states serving under 149 PACE programs.

Participants will learn about:
- What services are included under PACE
- Advantages and benefits of the PACE model of care
- PACE eligibility criteria and enrollment process

Presented by: Lisa Chen, On Lok PACE enrollment and outreach specialist, Bilingual (English and Mandarin).

CHALLENGES FACED BY AFRICAN AMERICAN CAREGIVERS

February 23, 2023 | 12:00 PM - 1:00 PM ET | Online

In honor of Black History Month, AARP North Carolina has partnered with Shevel Mavins and Kaii Marie Robertson, co-founders of the Behavioral Health Mind Body Academy, to recognize the importance of caregivers in the African American community and explore their unique challenges. Studies show that as African Americans age, they experience a greater incidence of chronic health conditions than their white counterparts. A 2016 CIGNA Health Disparities report found that:

- Four in 10 Black men aged 20 or older have high blood pressure, a rate 30 percent higher than that of white men. In Black women, the rate is 60 percent higher than for white women.
- Black Americans are more than twice as likely as whites to suffer from Alzheimer’s disease and other kinds of dementia. Research data also shows racial bias in pain assessment and treatment recommendations for Black patients.
Because racial bias is still a common occurrence in our health care system, it is critical for caregivers to know how to advocate effectively for their loved ones. Learn how you can ensure that your loved one is receiving quality care, and how to discuss the importance of advance care planning. (Meanwhile, caregivers themselves may be coping with chronic disease at higher rates.)

Please note that you must be signed in to your AARP.org account or create an account to register. AARP membership is not required to create an account. Please do not opt out of event-related email, as you will be emailed a link to join the presentation prior to the event.

Contact AARP North Carolina at ncaarp@aarp.org for more information.

**Working While Caring: A Discussion on Workplace Leave for Family Caregivers**

**February 23, 2023 | 2:00 PM - 3:00 PM ET | Online**

In commemoration of the 30th anniversary of the Family and Medical Leave Act, the U.S. Department of Labor (DOL) Wage and Hour Division is joining with the Women’s Bureau, the Office of Disability Employment Policy, and Veterans' Employment and Training Service for a conversation with stakeholders around barriers to workplace leave for family caregivers. This will be a virtual event.

This conversation will include:

- **Jessica Looman**, Principal Deputy Administrator, Wage and Hour Division, DOL
- **Taryn Williams**, Assistant Secretary of Labor for Disability Employment Policy, DOL
- **James D. Rodriguez**, Assistant Secretary for Veterans' Employment and Training Service, DOL
- **Wendy Chun-Hoon**, Director, Women's Bureau, DOL
- **Holly Biglow**, Government Affairs Director, Financial Security, AARP
- **Maria Town**, President & CEO, American Association of People with Disabilities
- **Kathy Roth-Douquet**, CEO & Board President, Blue Star Families

If you require an accommodation or language interpretation in order to attend this event, please email WHD-Events@dol.gov at least 5 business days prior to the event. If you have questions, please email WHD-Events@dol.gov.

Money Matters: Making Financial Plans After a Diagnosis of Dementia
February 23, 2023 | 5:00 PM - 6:00 PM ET | Online

After receiving a diagnosis of Alzheimer’s disease or another dementia, the need for and cost of future care may not be immediately considered.

Financial planning often gets pushed aside because of the stress and fear the topic evokes. However, financial stress can be reduced by preparing for care costs. The sooner planning begins, the more the person with dementia may be able to participate in decision-making.

Join Robert Wroblewski of Treece Financial Group for this educational webinar to learn 10 key tips to:

- help address what long-term costs may be faced
- how to cover costs
- considerations for individuals with younger-onset
- where to find support services
- and more.

Strategies to Support Social Engagement of Tribal Elders
February 24, 2023 | 1:00 PM - 2:00 PM ET | Online

Join engAGED: The National Resource Center for Engaging Older Adults and the Diverse Elders Coalition for a webinar focused on social engagement among tribal elders. During the webinar, the Administration for Community Living will discuss how Title VI Native American Aging Programs address social engagement and social isolation of tribal elders, share best practice strategies for outreach to tribal elders and highlight how other Aging Network organizations can work with Title VI programs when developing and implementing social engagement programming. Attendees will also hear from the Seneca Nation Area Office for the Aging and Shoshone-Bannock Tribes on how both Title VI programs are helping elders stay engaged and connected.

The Brain and Dementia

March 6, 2023 | 8:30 AM - 10:00 AM ET | Online

Understanding how dementia affects different parts of the brain is useful, particularly if you are looking after someone with dementia.

The brain is the most complex organ in the body and produces every thought, memory and action, experience and feeling we have. The more we can understand the brain, the more sense emotions and behavior will make.

You may already know that dementia is not just the brain getting older. It is caused by damage to the brain that can produce unpredictable results and symptoms.

But, did you know that there are more than 100 types of dementia? The condition affects memory, emotions, communication, behavior, vision and motor skills – and it worsens over time.

Tune in on March 6th for a presentation hosted by Dementia Carers Count that will help you learn about the different types of dementia and how they can affect the brain.

To register for this event, click the red button below.

Supporting Your Adult Child Through Their Cancer Diagnosis and Treatment

March 9, 2023 | 2:00 PM - 3:00 PM ET | Online

This presentation will address the emotional and physical impacts on parents who have young adults with cancer. It will explore common stressors and concerns including the burnout that arises while caregiving for young adults with cancer. It will also identify coping strategies and interventions to help parents navigate through their adult child’s cancer journey, including issues surrounding being a grandparent if the young adult has children.

This presentation is aimed at adult parents of young adults who have cancer but all are welcome to attend. There will be time to ask questions, as well as connect with other parents/grandparents.

Presenter Bio:

Sam Fortune is an oncology social worker, and the Women’s Cancers Program Coordinator at CancerCare. She provides counseling and support to people coping with cancer, caregivers of cancer patients, and people who have experienced the loss of a loved one. Sam also develops and executes programmatic activities for the Women’s Cancers Program, which cater to specific needs within the community. Furthermore, Sam participated in several national presentations on various Women’s Cancers topics and has been a speaker in several CancerCare’s Education Workshops as a leading expert in the field.

Planning for Getting Paid for Caring for a Family Member

March 10, 2023 | 2:00 PM - 3:00 PM ET | Online

The direct care workforce shortage means many families simply can’t find a direct care worker to hire. More and more families may use the caregiving budget to reimburse a family member for providing care. With a new planning tool provided by The Caregiving Years Training Academy, families can create plans to hire a family member and be empowered to have effective conversations with a financial planner and elder law attorney to ensure that they created the right solution for their family.

Join Denise Brown for a 50-minute meeting to explore the possibility of paying a family member (including yourself) for providing care.

Before joining us:

- Download our Paying for Care Planning Tool to use during our 50-minute session.

Denise began helping family caregivers in 1990 and launched one of the first online caregiving communities in 1996. She managed the community until its sale in March 2020 in order to focus on her training and development programs. Denise began helping her father in 2004 after his bladder cancer diagnosis. She also helped care for her mother for seven years until her death in August 2022.

To register for this event, click the red button below.

Successful Public Health Approaches in Dementia Caregiving: Rhode Island (A Virtual Roundtable Series)

March 14, 2023 | 11:30 AM - 1:00 PM ET | Online

In each episode of this virtual roundtable series we will highlight the story of one state that has successfully implemented a state-wide, innovative, and integrative approach to advancing its dementia caregiving goals. The session will begin with an overview of the state’s efforts in dementia caregiving, followed by a Q&A with attendees about key takeaways and ideas for action in their states and communities. This series offers a great opportunity for knowledge exchange, peer-learning and idea generation.

In this episode, we will present the story of Rhode Island.

Hospice: Common Myths and Misconceptions

March 14, 2023 | 2:00 PM - 3:30 PM ET | Online

Vantage Aging invites you to join us for a virtual Caregiver Solutions Event on March 14th, 2023, that will discuss different aspects of hospice care. Common misconceptions surrounding hospice and palliative care can often present a tremendous roadblock in delivering the right level of care at the right time. If you care for an aging loved one, it’s important to know about hospice care truths and options.

To register for this event, click the red button below.
Caregiving: The Art of Effective Communication

March 16, 2023 | 12:00 PM - 1:00 PM ET | Online

The National Alliance for Caregiving reports that the number of caregivers in the United States increased by 9.5 million between 2015 and 2020, so that more than 1 in 5 Americans are now caregivers. It is critical that caregivers are equipped with the knowledge and skills to provide assistance with daily living activities, schedule doctor appointments and create a healthy living environment. However, a key skill that is often overlooked is the ability to communicate effectively.

On March 16th (12:00 PM ET), Shevel Mavins and Kaii Marie Robertson, cofounders of the Behavioral Health Mind Body Academy, will host an online session that will offer communication strategies to help caregivers get the best results. Attendees will learn how exhibiting a calm demeanor can defuse difficult caregiving situations, for example, and how empathy and patience can strengthen the caregiving relationship. As a result, caregivers’ own mental and emotional well-being can benefit.

Contact AARP North Carolina at ncaarp@aarp.org for more information.

Preparing for an Outing with the Person You Care For

March 20, 2023 | 8:30 AM - 10:00 AM ET | Online

Tune in on March 20th for an online session hosted by Dementia Carers Count that will take a look at some of the challenges of going out in the community, both for the person with dementia and those who are caring for them.

This event will explore the importance of going out for both the person living with dementia and their carer. It will also look at ways to prepare and support someone with dementia before an outing and discuss about resources and support that may be helpful.

The session is for you if you would like to…

- gain some ideas for supporting the person and reduce your own fear or embarrassment of potential situations
- spend time with experienced health and care professionals who will answer your questions in a safe, supportive environment
- You would like to meet other people who are taking care of a friend or family member with dementia who may be in a similar situation

Anticipatory Grief Workshop for LGBTQ+ Caregivers

March 23, 2023 | 7:00 PM - 8:30 PM ET | Online

The feelings of grief tied to loss are an ongoing part of our role as caregivers when looking after family or friends suffering from chronic or terminal illnesses.

We grieve the gradual loss of those we care for due to their loss of cognition, mobility, or other aspects that defined them.

We grieve the loss of parts of who we are as we prioritize caregiving over personal activities that might have recharged us, brought us joy, or even offered us an escape from our day-to-day.

Many of us also experience the weight and pain of the loss of the person we are caring for.
before their death, yet never identify these feelings as anticipatory grief, or understand the impact this grief has on our well-being.

Join FCA for a 90-minute virtual workshop to better understand how anticipatory grief might be affecting you as a LGBTQ+ caregiver.

Subjects Covered During the Workshop: defining anticipatory grief, identifying ways in which anticipatory grief may be affecting you, discuss strategies to help process anticipatory grief.

Driving and Dementia Roadmap

March 27, 2023 | 2:30 PM - 4:00 PM ET | Online

Making the decision to stop driving and the transition to non-driving is challenging and complex, especially for drivers living with dementia and their care partners. In this webinar, Drs. Gary Naglie and Mark Rapoport, who lead a team of researchers focused on dementia and driving, will describe the development and evaluation of the Driving and Dementia Roadmap (DDR - www.drivinganddementia.ca) - a recently launched online educational resource. They will also demonstrate how to use the DDR, whether you are a person living with dementia, a care partner/friend or a healthcare/service provider supporting others through this process.

**This event will not provide information or training on how to assess an individual’s driving ability**

To register for this event, click the red button below.

APRIL

The University of Manchester Institute for Collaborative Research on Ageing

Hospice Staff and Family Carers & End-of-Life Dementia Care

April 4, 2023 | 9:00 AM - 10:00 AM ET | Online

More than 50 million people live with dementia worldwide, with figures reaching to more than 75 million by 2030. Being a progressive condition, in its advanced stages, dementia reduces the opportunities of the person to receive proper care, and more specialist end-of-life care is needed to ensure that better quality of life is promoted during the last period of life.

Hospices offer an interdisciplinary care model for the person and their family supporters. This type of care can occur in different settings (e.g., in-ward hospital, nursing home, long-
term facilities), it can be offered on a home-based service and or directly offered in the hospice through inpatient care.

Whilst hospices are regarded as providers of gold-standard care for people requiring end-of-life support, health care professionals working in these settings rarely receive dementia training and examples of evidence-based practices are currently lacking. More research is needed to investigate the experience of care delivery in hospice staff and family carers of people with dementia.

Join the Manchester Institute for Collaborative Research on Ageing on April 4th for a seminar about a recent study on the experience of hospice clinical staff and family carers of end-of-life dementia care.

To register for this event, click the red button below.

NCFS Caregiver Advocacy Program

April 11, 2023 | 1:30 PM - 3:00 PM ET or 7:00 PM - 8:30 PM ET | Online

The University of Pittsburgh's National Center on Family Support (NCFS) is looking for caregivers who are interested in becoming involved in advocacy.

NCFS's newly-launched Caregiver Advocacy Program will consist of a series of virtual workshops that will empower unpaid family caregivers to learn about caregiving-related policies, and how to use their experiences to tell their story and advocate for change.

Caregivers don't need to be policy experts to take part – just interested in learning more about advocacy. By the end of our program, they'll have something tangible to share with legislators or advocacy groups.

The lives of caregivers are busy and free time is limited. The program's sessions will be virtual and offered both in daytime and evening sessions for scheduling flexibility. The first sessions will be held on April 11th.

If you have questions, you can reach out to Heather Tomko at caregiving@pitt.edu.

To register for the workshop, click the red button below.
Heart Health for Family Caregivers

April 11, 2023 | 2:00 PM - 3:30 PM ET | Online

Often, family caregivers ignore their own health while caring for loved ones. Keeping your heart healthy by de-stressing and making small lifestyle changes can significantly reduce the impact of caregiving on your health.

Join the American Heart Association on April 11th for this edition of Vantage Agings' monthly event, Caregiver Solutions, intended to help caregivers find support and resources.

To register for this event, click the red button below.

REGISTER >

Understanding and Responding to Dementia-Related Behaviors

April 11, 2023 | 4:00 PM - 5:00 PM ET | Online

Behavior is a powerful form of communication and is one of the primary ways for people with dementia to communicate their needs and feelings as the ability to use language is lost. However, some behaviors can present real challenges for caregivers to manage. Join the Kadlec Neurological Resource Center on April 11th to how learn to decode behavioral messages, identify common behavior triggers, and learn strategies to help intervene with some of the most common behavioral challenges of Alzheimer's disease.
Health and Aging Policy Fellowship 2023-2024  
Call for Applications 

Deadline to apply: April 17, 2023  

With an aging population, one of the greatest challenges for the U.S. is ensuring that policies provide the best possible quality of life for all across all dimensions of society — from the communities where we live, the transportation we depend on, the food we eat, and the health care we receive. Success will require the translation of cutting-edge science and practical clinical experience into sound health policy. The goal of the Health and Aging Policy Fellows Program is to provide professionals in health and aging with the experience and skills necessary to help lead this effort, and in so doing, shape a healthy and productive future for older Americans.

The Health and Aging Policy Fellows Program offers two different tracks for individual placement: (1) a residential track that includes a 9-to-12-month placement in Washington, D.C. or at a state agency (as a legislative assistant in Congress, a professional staff member in an executive branch agency or in a policy organization); (2) a non-residential track that includes a health policy project and brief placement(s) throughout the year at relevant sites. The project may be focused at a global, federal, state or community level.

In addition, through our partnership with the veterans health administration, VA employees can participate in the VA track as a non-residential fellow.

Core program components focused on career development and professional enrichment are provided for fellows in all tracks.

To learn more about the fellowship, click here. To apply, click the red button below.
Pain and Other Assessments in a Person with Dementia

April 27, 2023 | 11:00 AM - 12:00 PM ET | Online

Tune in on April 27th for an online session in which Dr. Tan Cummings will discuss Pain and Other Assessments in a Person With Dementia. Professionals use a variety of tools to determine decline and remaining function in Persons With Dementia. Specific tools help give physicians, nurses and caregiving staff a better picture of what is happening to the resident. Assessing for depression, anxiety, ADLs, IADLs, Pain, etc., keeps arguments out of the doctor’s office and helps us to assist families in understanding the disease process.

Pain causes an estimated 50 percent of the behaviors in a Person With Dementia. Learn how to assess, plan and provide for pain treatment, including the use of narcotic medications.

To register for this event, click the red button below.

Caregiver Mental Health: How to Reduce Anxiety for Better Living

May 2, 2023 | 12:00 PM - 1:00 PM ET | Online

The caregiving role can bring forth many different feelings and emotions, and anxiety is one which can be problematic for those managing care. In observance of Mental Health Week this May, we welcome back Dr. Patrick McGrath to talk about:

- Anxiety in caregivers
- How to notice and address it
- Practical and unique tips to support your mental health

Dr. Patrick McGrath is a clinical psychologist and Emeritus Professor of Psychiatry at Dalhousie University and a scientist at the IWK Health Centre where his research is based. He is an Adjunct Professor of Psychiatry at the University of Ottawa and founder and president of 90Second Health Letters. He frequently treats caregivers with anxiety in his private practice.

To register for this event, click the red button below.

PATIENT AND CAREGIVER STUDIES

Memory Training to Improve Cognitive Function in Older Adults

Start: April 7, 2022
End: September 1, 2023
Enrollment: 30

Who is sponsoring this study? University of Michigan

Where is this study located? Michigan

What is this study about?

Working memory allows a person to remember and access information in the mind without losing track of what they are doing, such as a task. This study will test whether working memory training can improve learning and memory in people with mild cognitive impairment or normal cognition. Participants will receive online or in-person working memory training for 10 training sessions. At the start, end, and one month after the two-week training period, participants will take memory tests and undergo MRI brain imaging. Researchers will evaluate changes in task performance, memory, and cognition, and brain activity.

Do I Qualify To Participate in This Study?

Minimum Age: 60 Years
Maximum Age: N/A

Must have:
- Diagnosis of mild cognitive impairment
- Right-handed

Must NOT have:
- History of a neurological or medical condition known to affect cognitive functioning, other than mild cognitive impairment
- Serious mental illness
- Significant vision, hearing, or other impairment that limits the ability to participate
- History of alcohol or drug abuse
- Any condition that may make having an MRI brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy, body size and shape that prevents comfortable fit in scanners)

To learn more about this study, call Lauren Antonucci at (734)647-3704 or email her by clicking the red button below.

Online Training Program for Latino Dementia Caregivers

Start: November 2022
End: September 2024
Enrollment: 48
Who is sponsoring this study? University of Texas Health Science Center at San Antonio

Where is this study located? Texas

What Is this study about?

This study is evaluating the effectiveness of an online caregiver education program, named Learning Skills Together or Juntos, to improve confidence and overall well-being of Latino family caregivers of a person with dementia. Participants will be randomly assigned to participate in the program either immediately or as part of a waitlist group that will complete the program three months later. At the start and end of the six-week study, caregivers will answer questionnaires related to their confidence performing care tasks, resilience to challenging behaviors, and overall health.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years
Maximum Age: N/A

Must have:
- Family member to a person diagnosed with Alzheimer's disease or a related dementia
  - Person with dementia must have a Global Deterioration Score between 4 and 6
- Provide unpaid assistance with at least one major activity of daily living (e.g., bathing, eating, dressing)
- Able to read and speak English or Spanish

Must NOT have:
- Previous participation in the Learning Skills Together program
- Plans to place the care recipient in a skilled nursing facility within the next six months
- Severe depression, based on study screening evaluation

To learn more about this study, call Carole White at (210)380-5764 or email her by clicking on the red button below.

Firearm Safety in the Home of a Person with Dementia

Start: May 22, 2022
End: March 2024
Enrollment: 500

Who is sponsoring this study? Colorado School of Public Health.

Where is this study located? Colorado

What Is this study about?

This study will test the effectiveness of different online home safety tools to help family caregivers improve firearm safety in the home of person with dementia. Participants will be randomly assigned to use either an online firearm safety program or complete an online home safety checklist. All participants will complete questionnaires and other evaluations at the start of the study, after two weeks, and in follow-up after two and six months.
Researchers will measure changes in caregiver confidence and burden, along with changes in the person with dementia's access to firearms, and any injuries or threatening situations involving the person with dementia and a firearm.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years
Maximum Age: N/A

Must have:
Caregivers:
- Informal caregiver (e.g., family member or friend) of a person with dementia who has access to a firearm
- Speak English or Spanish
- Access to the internet

Person with dementia:
- Cognitive decline with signs of dementia
- Access to a firearm
- Living at home or in a senior community

Must NOT have:
Person with dementia:
- In legal custody or institutionalized

To learn more about this study, call Marian Betz at (303)550-5669 or email her by clicking on the red button below.

Social Engagement Study for Care Partners of Persons with Dementia

There is a new contactless study at the University of Illinois to provide opportunities for care partners who want to:

- Connect with others outside the role of caregiving
- Attend to self-care needs
- Reminisce with others in a casual setting
- Engage with others on topics of shared interests

What is the study about?

We are evaluating the benefits of remote social engagement events for individuals 60 and over who care for a relative with dementia. In the events, participants see a short slideshow about various topics of interest (e.g., the 60s, cooking, movies). After the slideshow, participants enter a virtual breakout room to have a casual and engaging conversation with others about the topic. You will have the flexibility to pick the events which work best for your schedule.

How is this different than a support group?

While support groups offer opportunities to learn and share about caregiving, this program is focused on providing social engagement opportunities outside your role as a caregiver to support your social health from the comfort of your home using an online platform.

You may be eligible to participate if:
- Age 60 and above
- Comfortable speaking English
- Have a computer, tablet, or iPad with internet access
- Care for a relative with dementia
- Can participate in 30-minute discussions over four weeks

**What do I need to participate?**
You will need access to a computer, laptop, or tablet with a webcam/microphone and internet access.

**What is the compensation?**
Three assessments are completed throughout the study process. You are paid $25 following each assessment.

If you have questions, please contact us by email at shs-caregiver-engage@illinois.edu or by phone at 217-333-5262.

If you want to participate in this study, click on the red button below.

[LEARN MORE](#)

**CADASIL Registry**

Start: June 3, 2022
End: October 2027
Enrollment: 2,500

**Who is sponsoring this study?** CADASIL Consortium

**Where is this study located?** Wisconsin

**What is this study about?**
CADASIL, or cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy, is a rare genetic disorder affecting the small blood vessels in the brain. The CADASIL Registry is enrolling people who have or are at risk of developing CADASIL, or who have a family member or other loved one with CADASIL. After joining the CADASIL Registry, volunteers will be invited to participate in studies on CADASIL.

**Do I Qualify To Participate in This Study?**

Minimum Age: 18 Years
Maximum Age: 90 Years

**Must have:**
- Person with CADASIL or at risk for CADASIL, or have a loved one or a family member with CADASIL

**Must NOT have:**
- None

To learn more or participate in this study, email the CADASIL Consortium by clicking on the red button below.

[LEARN MORE](#)
Nutrition in People With Dementia and Their Caregivers

Start: Oct. 25, 2022  
End: Sept. 14, 2023  
Enrollment: 120

Who is sponsoring this study? University of Kansas
Where is this study located? Kansas

What is this study about?

Informal caregivers perform many nutrition-related tasks as part of daily dementia care, including food shopping, preparation, and feeding. In this one-month observational study, a registered dietician will evaluate the nutritional health of people with dementia and their caregivers, as well as the caregivers’ nutrition knowledge. Caregivers will complete questionnaires about their nutritional needs and knowledge. The results of the study will inform future research to reduce malnutrition in people with dementia and their caregivers, as well as reduce caregiver burden.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years  
Maximum Age: N/A

Must have:

Participants with dementia:
• Diagnosed with Alzheimer’s disease or other dementia  
• Live at home with a family caregiver or a domestic partner  
• Availability of past weight records with a minimum of two different timepoints

Caregiver participants:
• Primary caregiver who is responsible for food planning  
• Normal cognition  
• English speaking

Must NOT have:

Participants with dementia:
• Diagnosis of frontotemporal dementia, alcohol-related dementia, Huntington’s disease, schizophrenia, or manic-depressive disorder

Caregiver participants:
• Vision problems that prevent completing questionnaires

All participants:
• Current participation in a nutrition treatment study

To learn more about this study, call Rebecca Mount at 913-945-8160 or email her by clicking on the red button below.
Racial/Ethnically Diverse Sexual and Gender Minority Caregivers of Individuals Living with Alzheimer's Disease and Related Dementias

To ensure that diverse sexual and gender minority (SGM) people are represented in Alzheimer's Disease and Related Dementias (ADRD) and caregiving research, the University of Nevada, Las Vegas is asking for insight on the lived experiences of racial/ethnically diverse SGM ADRD caregivers.

This research aims to provide valuable data necessary to design future caregiving interventions and services meant to improve the health and well-being of diverse ADRD caregivers.

Inclusion Criteria:
- Self-identify as lesbian, gay, bisexual, transgender, and queer (LGBTQ+) or a sexual and/or gender minority (SGM) and as a racial/ethnic minority.
- Provide care to an adult with Alzheimer’s disease or related dementias (ADRD) at least eight hours a week on average.
- Able to complete an interview, up to 2 hours, in English or Spanish.

Exclusion Criteria:
- Severe substance use/abuse
- Psychiatric disorders
- Inability to provide verbal consent

Participation is voluntary. All information will be kept confidential. Participants will receive a $50 Visa E-gift card after completion of the phone interview.

To learn more about this study, email Dr. Krystal Kittle by clicking on the red button below.

Spironolactone for African Americans with Mild Cognitive Impairment or Early Alzheimer's Disease

Start: Sept. 6, 2022
End: September 2023
Enrollment: 30
Who is sponsoring this study? Emory University
Where is this study located? Georgia

What is this study about?

This Phase 4 study will evaluate the safety and effects of the FDA-approved blood pressure medication spironolactone in older African American adults with mild cognitive impairment or early Alzheimer's disease. Participants will be randomly assigned to take either spironolactone or a placebo pill once a day for one year. All participants will complete memory and thinking tests at the start, mid-point, and end of the study. Researchers will monitor participants for side effects throughout the study.

Do I Qualify To Participate in This Study?

Minimum Age: 50 Years
Maximum Age: N/A

Must have:

- Self-identify as African American
- Normal blood pressure or controlled high blood pressure (110-140/40-90 mmHg)
- Diagnosis of mild cognitive impairment or early-stage Alzheimer's disease:
  - Self-reported memory concerns
  - Montreal Cognitive Assessment score of 15-25
  - Functional Assessment Questionnaire score < 9
- Wechsler Memory Scale-Revised Logical Memory subscale score:
  - < 11 for 16 or more years of education
  - < 9 for 8-15 years of education
  - < 6 for less than seven years of education

Must NOT have:

- Stroke in the last three years
- Unable to complete study procedures due to communication problems or other factors
- Any medical issue that interferes with the study procedures (e.g., chest pain, shortness of breath, or abdominal pain)
- History of allergy or adverse reaction to an aldosterone antagonist
- Uncontrolled high blood pressure
- Currently taking RAAS modulating medications (i.e., angiotensin II receptor blocker, angiotensin converting enzyme inhibitor, renin inhibitor, or aldosterone antagonist such as eplerenone)
- Kidney disease, with baseline creatinine > 2.0 mg/dL
- High potassium, with blood potassium > 5.5 mEq/dL
- Diagnosis of a neurological or psychiatric condition other than mild cognitive impairment that could impact cognition (e.g., Parkinson's disease and related movement disorders, multiple sclerosis, epilepsy, schizophrenia, untreated major depressive disorder, or other psychotic disorders)
- Abnormal levels of thyroid stimulating hormone (> 10 milliunits (mU)/L) or vitamin B12 (<250 pg/mL) that impact cognitive function
- Any medical or psychiatric disease that could affect participant safety or study results, according to the study investigator
- Uncontrolled congestive heart failure, with poor exercise tolerance and shortness of breath
- Women must be postmenopausal

To learn more about this study, call Dr. Antoine Trammell at 404-712-6332 or email him by clicking on the red button below.
Interview about Family Relationships and Wellbeing in Dementia

If you are a caregiver to a family member with dementia, you’re invited to participate in an interview about your caregiving experiences and wellbeing. The interview will last approximately 60-90 minutes and can be completed over the phone or via Zoom.

You will receive a $10 Amazon gift card for participating. In order to participate you must:

- Be a caregiver to a FAMILY MEMBER living with dementia
- Be at least 18 years old
- Be able to read and speak English

To sign up for an interview, click the red button below.

Co-Designing a Stress Management Toolkit for Families Living with Dementia

Researchers at Duke University would like to learn more about stress experienced by people living with dementia and their care partners, as well as about how families manage stress at home.

The goal of the project is to develop a toolkit of different things that people with dementia and their care partners can use on a daily basis to manage stress at home.

Focus groups will be held with dyads of people with dementia and their care partners together, and with care partners only. Groups will be held remotely using Zoom and are anticipated to last about 60-90 minutes. Participants will be compensated for their time.

Those that are interested in participating should call Melissa Harris at (405)513-1271 or email her by clicking on the red button below.

Mental Fatigue and Self-Care in Informal Oncology Caregivers

Are you an unpaid caregiver of a person living with cancer? Are you 18 years old or older? We want to hear about your experiences as a caregiver.

A research study is being conducted at the Medical University of South Carolina to understand how mental fatigue affects informal caregivers of persons living with cancer and determine if mental fatigue, participating in self-care activities, and general caregiver quality of life are related. We are seeking volunteers to share their experiences to help drive research within the cancer caregiver community. The study involves completing surveys that are expected to take 25-35 minutes.

It is our hope that this study will help guide future research to identify ways healthcare professionals can help caregivers handle the stresses of caregiving.

For more information or to see if you qualify for the study, click the red button below.
Communication in the Family

Hello! You are invited to be interviewed about your experiences and communication patterns as someone who currently (or in the past) cares for your family member living with Alzheimer’s disease or another related dementia (ADRD). There are potentially things you are uncertain about regarding caring for your family member, and we are interested in how you communicate to manage these uncertainties. Uncertainty means the inability to predict what will happen or the unknown. For example, you might worry about your loved one’s well-being because their dementia makes their behavior unpredictable.

You are eligible if you:

- Are at least 18 years old
- Used to or currently help care for one of your family members who lives/d with ADRD (by care, this includes but is not limited to: Eating, bathing, transferring, managing finances, medications, chores, shopping, etc.)

If you are interested, click the red button below to get started on scheduling your interview and answering some demographic questions.
PatientsLikeMe (PLM), a patient community and digital health management platform, and Takeda, a global, values-based, R&D-driven biopharmaceutical leader, are conducting a research study to better understand the post-transplant journey of patients and care partners to help determine any knowledge gaps and opportunities to better connect. The three-phase study seeks to better understand the transplant patient journey, particularly if they've experienced cytomegalovirus (CMV) infection, and identify changes in care journey experiences to help connect patients and their care providers.

PatientsLikeMe is a health tracking and learning platform embedded within an online social network. As of early 2020, the PLM community consists of ~860,000 members representing a wide range of conditions. The underlying PLM platform is designed, and continues to be optimized, to foster peer support and disseminate knowledge, including real-world insights. Members share personal stories about their health journey, engage with others who are (or were) in their situation, monitor symptoms, evaluate treatments, and track outcomes.

Participants will be compensated for their time and must:
1. Be 18 years of age or older
2. Be a patient or care partner of a patient who has had a solid organ transplant or hematopoietic stem cell transplant within the last three years.

If you fit the criteria below and want to share your experience via a written survey, click on the red button below.

IN CASE YOU MISSED IT...

Engaging Caregivers: A Program for Healthcare Workers

Learn about defining roles and responsibilities with patients and caregivers, the role of diversity and culture, and where to find resources to help with difficult situations and elder abuse. Healthcare workers can better serve patients through partnership with caregivers, but there is limited formal training and support on how to engage caregivers which is the focus of this series.
Coping with Agitation and Aggression in Alzheimer's Disease

People with Alzheimer's disease may become agitated or aggressive as the disease gets worse. Agitation means that a person is restless or worried. He or she doesn't seem to be able to settle down. Agitation may cause pacing, sleeplessness, or aggression, which is when a person lashes out verbally or tries to hit or hurt someone.

Most of the time, agitation and aggression happen for a reason. When they happen, try to find the cause. If you deal with the causes, the behavior may stop.

To learn more, click the red button below.

LEARN MORE

Wandering and Alzheimer's Disease

Many people with Alzheimer's disease wander away from their home or caregiver. As the caregiver, you need to know how to limit wandering and prevent the person from...
becoming lost. This will help keep the person safe and give you greater peace of mind.

To learn more, click the red button below.

LEARN MORE >

Alzheimer's and Hallucinations, Delusions, and Paranoia

Due to complex changes occurring in the brain, people with Alzheimer's disease may see or hear things that have no basis in reality.

If a person with Alzheimer's has ongoing disturbing hallucinations or delusions, seek medical help. An illness or medication may cause these behaviors. Medicines are available to treat these behaviors but must be used with caution. The following tips may also help you cope with these behaviors.

To learn more, click the red button below.

LEARN MORE >

When a Person with Alzheimer's Rummages and Hides Things
Someone with Alzheimer’s disease may start rummaging or searching through cabinets, drawers, closets, the refrigerator, and other places where things are stored. He or she also may hide items around the house. This behavior can be annoying or even dangerous for the caregiver or family members. If you get angry, try to remember that this behavior is part of the disease.

To learn more, click the red button below.

Managing Personality and Behavior Changes in Alzheimer's

Alzheimer's disease causes brain cells to die, so the brain works less well over time. This changes how a person acts. Common personality and behavior changes you may see include:

- Getting upset, worried, and angry more easily
- Acting depressed or not interested in things
- Hiding things or believing other people are hiding things
- Imagining things that aren't there
- Wandering away from home
- Pacing a lot
- Showing unusual sexual behavior
- Hitting you or other people
- Misunderstanding what he or she sees or hears

You also may notice that the person stops caring about how he or she looks, stops bathing, and wants to wear the same clothes every day.

To learn more, click the red button below.
Patient Priorities Care Veterans Affairs
Implementation Toolkit

Patient Priorities Care (PPC) helps patients and clinicians focus all decision-making and healthcare on what matters most: patients’ own health priorities. It was developed by clinicians, patients, caregivers, health system leaders, and payers.

PPC is particularly suited for older adults who must manage multiple conditions and navigate multiple clinicians. People with multiple conditions receive a lot of care that is often burdensome and may not address what matters most to them. Patient Priorities Care recognizes that, when faced with tradeoffs, older adults differ in their own health outcome goals (what they want to achieve from their healthcare) and in their care preferences (what they can do to achieve their goals).

PPC has released a new toolkit on guiding PPC implementation within Veterans Affairs (VA) clinical settings to help identify and make treatment decisions based on what matters to older veterans.

To access the toolkit, click on the red button below.

A Caregiver's Guide to the Dying Process

Grief is not experienced only after death. As a caregiver, you may be susceptible to two types of grief: anticipatory grief during your loved one’s illness, and then grief that occurs
Many caregivers experience “anticipatory grief” as they observe the physical, psychological, and cognitive declines occurring as the illness progresses. For many caregivers of people with dementia this may be especially painful, as their loved one becomes almost unrecognizable compared to the person “they used to be.”

After the death of a loved one, it can be difficult to see how to ever go on. The grief journey may seem like a mountain that is too difficult to climb. The Hospice Foundation of America offers a booklet, *A Caregiver’s Guide to the Dying Process*, that provides guidance to care providers facing these circumstances.

To view the booklet, click the red button below.

**Aging in Place: Growing Older at Home**

Individuals intending to "age in place" in their own homes face a number of challenges. The good news is that with the right help you might be able to do just that.

Planning ahead is hard because you never know how your needs might change. The first step is to think about the kinds of help you might want in the near future. Maybe you live alone, so there is no one living in your home who is available to help you. Maybe you don't need help right now, but you live with a spouse or family member who does. Everyone has a different situation.

To learn more, click the red button below.

---

**PREVIOUSLY APPEARED**

**Different Care Settings at the End of Life**

The three most common places people at the end-of-life die are at home, in a hospital, or
Providing Care and Comfort at the End of Life

Not all end-of-life experiences are alike. Death can come suddenly, or a person may linger in a near-death state for days. For some older adults at the end of life, the body weakens while the mind stays clear. Others remain physically strong while cognitive function declines. It's common to wonder what happens when someone is dying. You may want to know how to provide comfort, what to say, or what to do.

To learn more, click the red button below.

Legal Issues for LGBTQ+ Caregivers

Lesbian, gay, bisexual and transgender people, in couples or not, face increasingly important legal and financial decisions as they age. These legal and financial decisions, the documents that enforce them, and the agents that you name in them will determine who has the legal authority to confer with your doctors and make medical decisions for you, and who has the legal authority to manage your financial resources if and when you become incapacitated, legally unable to act on your own behalf.

To learn more, click the red button below.
The mission of Rush Caring for Caregivers is to support family members or friends who are caring for adults 60 and older by offering services that aim to reduce caregiver stress, prevent caregiver burnout, and assisting caregivers in finding a balance between the needs of their loved ones and their own needs.

The C4C program has been proven to have positive health-related outcomes for both adults age 60 and older as well as for their care partners. Funded by the RRF Foundation for Aging, it uses an evidence-based framework to improve care for older adults and caregivers through education, resources and support. C4C focuses on what matters to the caregiver by assisting in developing a plan for the caregiver’s physical and emotional health and well-being while incorporating the care needs and preferences of the older adult. These services may be delivered in person, by telephone or via video conferencing. C4C does not charge for the initial meeting and other sessions are covered by most insurances.

Caregiver’s Guide to Medications and Aging

Modern medicines have contributed to longer life spans, improved health, and vastly improved our overall quality of life. Medications are the most common treatment for many diseases and conditions seen in older people and persons with disabilities. Medicines now not only treat and cure diseases that were untreatable just a few years ago, they aid in the early diagnosis of disease; prevent life-threatening illnesses; relieve pain and suffering; and allow people with terminal illnesses to live more comfortably during their last days.

However, for older adults and people with disabilities, medications—prescription, over-the-counter, social drugs such as alcohol, and herbal remedies/alternative medicines—can be a double-edged sword. When not used appropriately, effectively, and safely, medications can have devastating consequences.

HIV-Associated Neurocognitive Disorder (HAND)

Since the start of the AIDS epidemic more than three decades ago, doctors, family and friend caregivers, and patients have observed that some people with the disease experience decline in brain function and movement skills, as well as shifts in behavior and mood. This disorder is called HIV-associated Neurocognitive Disorder, or “HAND.” Although advances in antiretroviral therapy from the past two decades have decreased the severity of HAND, symptoms still persist in 30–50% of people living with HIV. For many people, these symptoms continue to affect activities of daily living.

Frequently Asked Questions about Caregiving

Caregiving can be overwhelming, especially when you’re starting out. Take a deep breath! Then tackle one task at a time.

First, assess your loved one’s needs. What types of help are needed? Ask family members and friends to share tasks. Look for resources in your community, such as home health care or adult day care centers. The Eldercare Locator can help you find in-home help; transportation; resources to install ramps, grab bars, or other home modifications; and other resources in your area. It can also help you learn about options for paying for care.

Paying for Mental Health Care: Your Questions Answered!

Paying for mental health care is no easy task. Even people with health insurance have trouble finding and paying for mental health care. The situation can feel dire.

A new fact sheet released by Families for Depression Awareness explains issues involved in paying for care and offers practical strategies that help you support your loved one in getting necessary mental health treatment.

To view the fact sheet, click the red button below.

How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

As a long-distance caregiver, you can provide important respite to the primary caregiver and support to the aging family member. First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion.

To learn more, click the red button below.
Dementia-Related Pain: What Caregivers Need to Know

As dementia progresses, so does the likelihood that patients are experiencing pain. Between 50% and 80% of patients with moderate to severe dementia experience pain daily. Many patients receive inadequate treatment due to lack of recognition. Alzheimer's disease causes the person to develop a mask-like facial expression. This minimizes typical facial expressions of pain, like a drawn mouth or furrowed brows. Also, patients may have lost the cognitive ability to tell caregivers about their pain with phrases such as "this hurts" or "I am in pain."

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough. How people pay for long-term care — whether delivered at home or in a hospital, assisted living facility, or nursing home — depends on their financial situation and the kinds of services they use.

Taking Care of Yourself: Tips for Caregivers

Taking care of yourself is one of the most important things you can do as a caregiver. Make sure you’re eating healthy, being active, and taking time for yourself.

Caregiving, especially from a distance, is likely to bring out many different emotions, both positive and negative. Feeling frustrated and angry with everyone, from the care recipient to the doctors, is a common experience. Anger could be a sign that you are overwhelmed or that you are trying to do too much. If you can, give yourself a break: take a walk, talk with your friends, get some sleep — try to do something for yourself.

Podcast: Caring for a Parent at the End of Life

Mark Chesnut is a NYC-based journalist, editor, and public speaker. His book, Prepare for Departure, Notes on a single mother, a misfit son, inevitable mortality, and the enduring allure of frequent flyer miles, is about love and care and acceptance – not the infamous acceptance from the 5 stages of grief – but the acceptance that can happen between a mother and son when one of their lives is coming to an end.
This episode of the Dougy Center's podcast "Grief Out Loud" travels to a lot of places, including: What Mark learned about grief from his mother after his father died. How those lessons shaped the way he approached caring for her and grieving her death. How Mark moved into a place of acceptance with his mother for the ways she responded when he came out to her as a young adult. The ways he dealt, and continues to deal with grief, even during the height of COVID, when he was unable to access his usual outlet, travel.

Optimism Linked to Longevity and Well-being in Two Recent Studies

Optimism is linked to a longer lifespan in women from diverse racial and ethnic groups, and to better emotional health in older men, according to two NIA-funded studies. One study showed that the previously established link between optimism and longevity applies to racially and ethnically diverse populations of women and that the link is only partially due to changes in health behaviors. The other study showed that more optimistic men have fewer negative emotions, due in part to reduced exposure to stressful situations. These findings suggest that increasing optimism may be a way to extend lifespan and improve well-being in older adults.

Podcast: How to Take Better Care of Your Loved Ones

Giving and receiving care—it’s a natural part of life. But how do we offer the best possible support for our loved ones? Tune in for this podcast in which TED speakers share ideas on reimagining caregiving.

Guests include dementia care advocate Yvonne van Amerongen, attorney Diana Adams, inclusion advocate Sara Jones, and comedian Bill Bernat.
Helping Children Understand Alzheimer's Disease

When a family member has Alzheimer’s disease, it affects everyone in the family, including children and grandchildren. It’s important to talk to them about what is happening. How much and what kind of information you share depends on the child’s age and relationship to the person with Alzheimer’s.

Talk with kids about their concerns and feelings. Some may not talk about their negative feelings, but you may see changes in how they act. Problems at school, with friends, or at home can be a sign that they are upset. A school counselor or social worker can help your child understand what is happening and learn how to cope.

To learn more, click the red button below.

Managing Money Problems in Alzheimer's Disease

People with Alzheimer’s disease often have problems managing their money. In fact, money problems may be one of the first noticeable signs of the disease.
Early on, a person with Alzheimer's may be able to perform basic tasks, such as paying bills, but he or she is likely to have problems with more complicated tasks, such as balancing a checkbook. As the disease gets worse, the person may try to hide financial problems to protect his or her independence. Or, the person may not realize that he or she is losing the ability to handle money matters.

To learn more, click the red button below.

---

**What Are the Signs of Alzheimer's Disease?**

The symptoms of Alzheimer's can vary from one person to another. Memory problems are typically one of the first signs of the disease. Decline in non-memory aspects of cognition, such as finding the right word, trouble understanding visual images and spatial relationships, and impaired reasoning or judgment, may also signal the early stages of Alzheimer's. As the disease progresses, symptoms become more severe and include increased confusion and behavior changes.

Epilepsy Resources for Caregivers

Whether you’ve been a caregiver for years or if your duties as a caregiver are just beginning, it’s comforting to know that there are epilepsy resources to help you navigate your loved ones’ journey.

Many resources exist to connect you with others who are experiencing something similar. There are also support services that can help when you may be feeling a little lost. No matter your situation, there are people and places you can turn to when you need a helping hand.
Informal Caregivers in Cancer

Being a caregiver means helping with the daily needs of another person. An informal caregiver is usually a relative or friend who may or may not live in the same house as the person they are caring for. A formal caregiver, such as a nurse, is paid and has training to care for a patient. Informal and formal caregivers help people with cancer during and after treatment in many ways.

The NIH's National Cancer Institute has put together a fact sheet about the roles, needs, and burdens of informal caregivers who are caring for a person with cancer. To view the fact sheet, click the red button below.

What Parents and Caregivers Need to Know About the New Pediatric Obesity Guidance

For the first time in 15 years, the American Academy of Pediatrics (AAP) has updated its guidance on obesity in children, recommending a more proactive approach.

According to the Centers for Disease Control and Prevention, nearly 20% of children and adolescents in the United States are obese—meaning that their body mass index (BMI) is at or above the 95th percentile of the CDC growth chart. For children, BMI is an age- and sex-specific measurement using height and weight that helps assess body fat. Children who are obese are at higher risk for physical health issues, including heart disease and type 2 diabetes, as well as mental health issues, such as anxiety and depression.

To learn more, click the red button below.

Understanding Chronic Sorrow
There is sneaky grief and loss that caregivers of children with mental illness experience. Chronic sorrow, as it has been called, is "ambiguous, one that rarely subsides over time, and is rarely acknowledged." As a caregiver of children who have struggled with mental illness, I have learned to celebrate the joy and stay in deep gratitude for healthy times, yet there is a constant dull ache that persists, and chronic sorrow gives this a name for me. In my professional role, I have listened as chronic sorrow creates an additional barrier for caregivers, complicating the stress and anxiety of caring for their children.

**Blood Test for Early Alzheimer's Detection**

One of the first stages of Alzheimer's disease involves formation of toxic aggregates, called oligomers, of the protein amyloid beta (Aβ). These oligomers can start to form more than a decade before symptoms appear and before other known disease markers form. The ability to detect these oligomers would permit early disease diagnosis. This would make strategies to intervene before irreparable brain damage occurs possible.

**Healthy Eating and Alzheimer's Disease**

Eating healthy foods helps everyone stay well. It’s even more important for people with Alzheimer’s disease.

When the person with Alzheimer’s disease lives with you:

- Buy healthy foods such as vegetables, fruits, and whole-grain products. Be sure to buy foods that the person likes and can eat.
- Give the person choices about what to eat—for example, “Would you like green beans or salad?”
- Buy food that is easy to prepare, such as premade salads and single food portions.

Changes in Intimacy and Sexuality in Alzheimer's Disease

Alzheimer's disease can cause changes in intimacy and sexuality in both a person with the disease and the caregiver. The person with Alzheimer's may be stressed by the changes in his or her memory and behaviors. Fear, worry, depression, anger, and low self-esteem (how much the person likes himself or herself) are common. The person may become dependent and cling to you. He or she may not remember your life together and feelings toward one another. The person may even fall in love with someone else.

End-of-Life Care for People With Dementia

People often live for years with dementia. While it can be difficult to think of these diseases as terminal, they do eventually lead to death. Caregivers often experience special challenges surrounding the end of life of someone with dementia in part because the disease progression is so unpredictable. Below are some considerations for end-of-life care for people with dementia.

To learn more, click the red button below.
Tips for People With Dementia

People with dementia experience a range of symptoms related to changes in thinking, remembering, reasoning, and behavior. Living with dementia presents unique challenges, but there are steps you can take to help now and in the future.

Alzheimer's disease and related dementias get worse over time. Even simple everyday activities can become difficult to complete. To help cope with changes in memory and thinking, consider strategies that can make daily tasks easier. Try to adopt them early on so you will have more time to adjust.

To learn more, click the red button below.

Getting Help with Alzheimer's Caregiving

Some caregivers need help when the person is in the early stages of Alzheimer's disease. Other caregivers look for help when the person is in the later stages of Alzheimer's. It's okay to seek help whenever you need it.
As the person moves through the stages of Alzheimer's, he or she will need more care. One reason is that medicines used to treat Alzheimer's disease can only control symptoms; they cannot cure the disease. Symptoms, such as memory loss and confusion, will get worse over time.

Because of this, you will need more help. You may feel that asking for help shows weakness or a lack of caring, but the opposite is true. Asking for help shows your strength. It means you know your limits and when to seek support.

To learn more, click the red button below.

February 22nd Is Heart Valve Disease Awareness Day

Even though as many as 11 million Americans are affected by heart valve disease, public awareness of the disease is shockingly low. The seriousness of the disease, combined with the fact that symptoms are often difficult to detect or dismissed as a normal part of aging, makes this lack of awareness dangerous. While heart valve disease can be disabling and deadly, it can usually be successfully treated in patients of all ages if treated in time, making education and awareness particularly important.

The Heart Valve Disease Awareness Day campaign takes place every February 22nd during American Heart Month. The goal of this initiative is to provide allies and partners with easy-to-understand messages that can easily be incorporated into outreach efforts. It includes social media graphics, videos, magazine inserts and other tools to enable others to spread the word about valve disease.

To learn more about raising awareness of Heart Valve Disease Awareness Day, click the red button below.

How Family Caregivers Can Help When Personal Hygiene Is a Problem

Pamela Toto’s 102-year-old client had a problem: She was able to live alone, with help from her son, but getting in and out of her shower, where she had a chair and a handheld nozzle, was too difficult.

So, Toto, an occupational therapist, showed the son how to safely help his mother into her shower chair.

But, Toto says, “they didn’t do it.” She learned why in a talk with the son: “He said, ‘I do everything for my mom, but I just don’t want to see her naked.’” Toto helped the pair find a solution: a wrap-around towel robe the woman already had that she could wear on the way into and out of the shower.

It was a good illustration, Toto says, of the challenges, both practical and emotional, that caregivers and care recipients face when someone needs help with showering, using the toilet or other intimate hygiene tasks.

How Caregivers Can Counter Family Gaslighting

Intentionally misleading someone to believe something that isn’t true is often called gaslighting, named for the Alfred Hitchcock–directed 1944 movie *Gaslight*, in which a devious husband uses trickery and deception to manipulate his gullible wife into thinking she’s losing her mind. The term has become part of common parlance in our polarized age of decreased trust in institutions and one another.

People may feel gaslit by friends who are warm and supportive to their faces but bad-mouth them behind their backs; when caught, the gaslighter will say the person is crazy that they thought the comments were about them. An employee may complain of being gaslit by a boss who promises an increased bonus for working longer hours and then reneges, denying having made such a claim. And caregivers may feel gaslit by other family members who deliberately twist the truth about a care receiver’s needs or the caregiver’s responsibilities, to increase that caregiver’s sense of duty and guilt.

Grandfamilies and Kinship Support Network: A National Technical Assistance Center

The Grandfamilies & Kinship Support Network is the first-ever national technical assistance center for those who serve grandfamilies and kinship families. The Network exists, free of charge, to offer a new way for government agencies and nonprofit organizations in states, tribes, and territories to collaborate and work across jurisdictional and systemic boundaries—all to improve supports and services for grandfamilies and kinship families. Our work is rooted in cultural competence and linguistically appropriate approaches and is fully accessible to people with disabilities.

The Grandfamilies & Kinship Support Network will create lasting change for families around the country by connecting and supporting:

- Policy and program leaders at government agencies in states, tribes, and territories within aging/elder/senior services, child welfare, disability, education, housing, nutrition, Medicaid and Medicare, and Temporary Assistance for Needy Families (TANF);
- Kinship navigators; and
- Leaders of nonprofit, community-based, and faith-based organizations focused on supporting grandfamilies and kinship families.

Legal and Financial Planning for People with Dementia

Many people are unprepared to deal with the legal and financial consequences of a serious illness such as Alzheimer's disease or a related dementia. Legal and medical experts encourage people recently diagnosed with a serious illness — particularly one that is expected to cause declining mental and physical health — to examine and update their financial and health care arrangements as soon as possible. Basic legal and financial documents, such as a will, a living trust, and advance directives, are available to ensure that the person's late-stage or end-of-life health care and financial decisions are carried out.

I Am Not Alone Care Alliance

ianacare, the market leader in family caregiver benefits, is now forming the “I Am Not Alone Care Alliance” to create a full infrastructure of support across all sectors. They have galvanized key leaders and influencers from Fortune 500 companies, digital health, public sectors, and HR & benefits communities to lead the conversation and shape the future of caregiving resources. Designed for action and launched during National Family Caregivers Month, the I Am Not Alone Care Alliance will change the way public and private sectors work together to amplify the voice of millions of family caregivers and to fill the gaps - so no caregiver does this alone.

Parkinson's Disease: Causes, Symptoms, and Treatments

Parkinson’s disease is a brain disorder that causes unintended or uncontrollable movements, such as shaking, stiffness, and difficulty with balance and coordination.

Symptoms usually begin gradually and worsen over time. As the disease progresses, people may have difficulty walking and talking. They may also have mental and behavioral changes, sleep problems, depression, memory difficulties, and fatigue.

Support for Families When a Child Has Cancer

When a child has cancer, every member of the family needs support. Parents often feel shocked and overwhelmed following their child’s cancer diagnosis. Honest and calm conversations build trust as you talk with your child and his or her siblings. Taking care of yourself during this difficult time is important; it’s not selfish. As you dig deep for strength, reach out to your child’s treatment team and to people in your family and community for support.

What Is Long-Term Care?

Long-term care involves a variety of services designed to meet a person's health or personal care needs during a short or long period of time. These services help people live as independently and safely as possible when they can no longer perform everyday activities on their own.

Long-term care is provided in different places by different caregivers, depending on a person's needs. Most long-term care is provided at home by unpaid family members and friends. It can also be given in a facility such as a nursing home or in the community, for example, in an adult day care center.

Veteran Caregiver Kids: America Wants to Hear Your Story

A new initiative is seeking out the voices of America’s military-connected caregiving youth to further shine a light on the experiences of “hidden helpers” — children living with and serving wounded, ill or injured service members and veterans.

Children and young adults are asked to submit their stories in the way they want to tell them — through writing, drawing, film, photography or other means.

Getting Started Guide for New Caregivers

When many people hear the word caregiver, they tend to think of someone who takes care of a disabled relative and acts almost like a home nurse while also taking care of finances, cooking, and cleaning. That's not wrong, but not all caregivers play such an involved role. Being a caregiver can mean a lot of things.

Mental Health America (MHA) has released a guide for new caregivers. Its specific focus is on people who care for someone who has been recently diagnosed with a mental health condition.

Saving Money with the Inflation Reduction Act

The Inflation Reduction Act will save money for people with Medicare by improving access to affordable treatments and strengthening the Medicare program.

The cost of a month’s supply of each Part D-covered insulin will be capped at $35, and you won’t have to pay a deductible for insulin, starting on January 1, 2023.

If you have drug costs high enough to reach the catastrophic coverage phase in your Medicare drug coverage, you won’t have to pay a copayment or coinsurance, starting in 2024.

Legacy Lessons from the Sages of Aging

Curated from twelve hours of interviews with 12 of the diverse set of legendary pathfinders in the fields of aging, Legacy Lessons from the Sages of Aging is a 90-minute powerful and inspirational documentary for students and professionals in gerontology, social work, healthcare, medicine, nursing, law, housing, psychology, and other professions who work to meet the needs of older adults.
Planning for the Future After a Dementia Diagnosis

If you or a loved one has been diagnosed with Alzheimer’s disease or a related dementia, it may be difficult to think beyond the day to day. However, taking steps now can help prepare for a smoother tomorrow.

Over time, the symptoms of Alzheimer’s and related dementias will make it difficult to think clearly. Planning as early as possible enables you to make decisions and communicate those decisions to the right people.

Look for the Helpers: Providing Support to Older Adults

People age 50 and above commonly provide health, personal, and other types of care and support to other older adults living with chronic conditions or disabilities. This support is often essential for aging in place and managing chronic conditions. In July 2022, the University of Michigan National Poll on Healthy Aging asked a national sample of U.S. adults age 50–80 about their experiences helping an adult age 65 or older with health, personal, and other types of care needs.

Medicaid Structured Family Caregiving: Enabling Family Members to Make Caregiving Their Primary Focus

Family caregivers play an important role in states’ efforts to help Medicaid beneficiaries safely remain in their communities. And, as of August 2022, at least seven states (Connecticut, Georgia, Indiana, Louisiana, Missouri, North Carolina, and South Dakota) covered structured family caregiving (SFC) services provided to older adults and/or people with physical disabilities under their Medicaid programs. Coverage of SFC services results in Medicaid payments and other support to family caregivers, usually including spouses and others who are legally responsible for the beneficiary. This brief, which is based on research and interviews with state staff, examines how Georgia, Missouri, and South Dakota are using Medicaid-funded SFC services to help older adults remain in the homes they share with their loved ones.

SFC services consist of a package of services that support home and community-based services (HCBS) waiver participants’ primary caregivers and includes payment, individualized training based on the needs of the waiver participant, coaching, back-up or respite care, and other supports. All interviewees emphasized that they valued SFC services because they enabled HCBS waiver participants who do not self-direct services to receive the personal care they need in their homes from people they know and trust.

Georgia and South Dakota offer SFC services to both older adults and people with disabilities enrolled in Medicaid. Missouri, however, offers the services only to Medicaid beneficiaries with Alzheimer’s or a related diagnosis. In all three states, Medicaid beneficiaries must be enrolled in an HCBS waiver to qualify for SFC services. As of July 2022, Missouri was providing SFC services to 62 waiver participants, and South Dakota was providing them to 217 participants. Also, all three states administer their SFC services through agencies, which are entities (usually home health providers) that have agreed to provide the services. Interviewees reported that approach enabled their states to implement the service without new staff resources and helped ensure appropriate oversight of the care delivered to Medicaid beneficiaries.
