The National Alliance for Caregiving Responds to 2023 State of the Union Address

The National Alliance for Caregiving (NAC) President and CEO Jason Resendez issued the following statement in response to President Biden’s State of the Union speech:

The National Alliance for Caregiving applauds the inclusion of family caregivers in President Biden’s State of the Union address. From paid family and medical leave and improved home and community-based supports to accelerating treatments for cancer and Alzheimer’s, the President outlined a bold vision for investing in the infrastructure needed to make care easier and more dignified for America’s 53 million family caregivers.

Senators Moran, Tester & Hassan Introduce Elizabeth Dole Care Act

U.S. Senators Jerry Moran (R-Kan.), Jon Tester (D-Mont.) and Maggie Hassan (D-N.H.) – members on the Senate Veterans’ Affairs Committee (SVAC) – recently introduced the Elizabeth Dole Home Care Act. This legislation would expand community-based services for aging veterans as well as improve VA support for veterans and caregivers of all ages.

The Elizabeth Dole Home Care Act exemplifies Sen. Elizabeth Dole’s passion for supporting veterans and their caregivers by expanding access to home and community-based care programs for veterans, increasing support for noninstitutional care, assessing VA’s

How Exercise Can Help You Build Resilience at Any Age

Stress surrounds us every day in subtle and substantial ways. Although we can’t eliminate stress from daily life, research shows that by intentionally stressing our bodies through exercise, we can change how we respond to stress and boost our resilience.

Resilience is the ability to bounce back from adversity — a career setback, a relationship breakup or any of the big and small disappointments of daily life — and grow from the experience so that we handle difficult situations even better the next time.
NAC NEWS AND UPDATES

February 28, 2023 | 1:00 PM - 2:00 PM ET | Online

Join the National Alliance for Caregiving for the release of their new guide, Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups. This guide provides information learned from diverse family caregivers on how their culture may affect their caregiving role and their interaction with caregiving resources, and provides guidance on how patient advocacy groups can reach diverse caregivers with culturally responsive support. At the webinar, NAC will go through some of their findings and the content of the guide itself.

To register for the webinar, click the red button below.

Opening for an Associate Director of Policy & Advocacy Position with NAC

The National Alliance for Caregiving (NAC) has posted a job opening for an Associate Director of Policy & Advocacy position. The Associate Director will support NAC’s Advocacy Department with the aim to further NAC’s vision of a society that values, supports, and empowers family caregivers—drawing on NAC’s mission to build
partnerships in research, advocacy, and innovation to make life better for family caregivers.

Interested applicants can email Mike Wittke, Vice President for Policy & Advocacy, at mike@caregiving.org or click the red button below.

The National Alliance for Caregiving Opens Phone Line for Family Caregivers to Talk About Their Mental Well-Being

Sponsored by Travere Therapeutics, the National Alliance for Caregiving is spearheading a project to advance the mental well-being of family caregivers in the United States. NAC wants to hear from family caregivers on the joys, challenges and struggles they’ve faced on their caregiving journey in order to better understand their needs and the supports and interventions that can be introduced to assist them.

If you’re a family caregiver or have cared for someone in the past, call 1-888-665-2190 to share your caregiving story and the feelings associated with it.

If you would prefer to write out your response rather than leave an audio message, you may do so here.

We want to know:

• What joys have you experienced as a caregiver?
• How are you feeling about being a caregiver?
• What are challenges you have faced as a caregiver?
• What are concerns you have about providing care?

The message you leave will inform policy and practice efforts to improve support for family caregivers like you! All messages left will be anonymous, with only the transcript being used to help us advocate for change.
It’s important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. **Assessing the Pain of Care Recipients: Tools Available to Family Caregivers** utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

To read the report, click the red button below..

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America’s 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it’s needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC’s report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

To read the report and access our findings, click the red button below.

Global Voices of Caregiving: A PhotoVoice Project

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the
globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn’t work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver’s own experience and tells a diverse story of what it’s like to care for others, an act which connects us all.

To view and hear these stories, please click on the red button below.

Engaging Caregivers: A Program for Healthcare Workers

**FEBRUARY**

**CAREGIVER TELECONNECTION**

**Thursdays, February 9 - February 23, 2023, 11:00 AM – 12:00 PM ET | Online**

The Caregiver Teleconnection program has one-hour conference calls, at no cost. These sessions cover a wide range of interesting topics related to the care you provide to your loved one. You can get expert advice, ask questions and talk to other people who are also providing care.

Beginning on February 9th, join in for a three-session Caregiver Teleconnection program that will focus on defining roles and responsibilities with patients and caregivers, the role of diversity and culture, and where to find resources to help with difficult situations and elder abuse. Healthcare workers can better serve patients through partnership with caregivers, but there is limited formal training and support on how to engage caregivers which is the focus of this series. Certificate of attendance provided upon request. Certificate of attendance provided upon request.

To participate in these sessions, you can either log in using a laptop, tablet or phone. If you prefer to call in, a phone number will be provided within the Zoom registration.
Family caregivers play an invaluable part in supporting people living with heart failure. However, this role can be stressful and overwhelming, and it may be difficult for caregivers to balance their needs with their care recipient.

In recognition of Heart Month, join the Ontario Caregiver Organization on February 9th for a presentation given by two heart failure caregivers, Cindy Yip and John Yudelman, who will share their challenges, experiences, and helpful supports they found on their caregiver journeys. You will also hear from Dr. Phyllis Billia, cardiologist at UHN’s Peter Munk Cardiac Centre. Dr. Billia specializes in heart failure, focused on patients undergoing advanced therapies. She will provide practical resources and explain care strategies and support for caregivers.

To register for this event, click the red button below.

Preparation to Care for a Loved One

February 10, 2023 | 2:00 PM - 3:00 PM ET | Online

No matter where you are in the journey of family caregiving – just beginning to anticipate a need, helping to coordinate a big move, or taking care of a family member full-time – having a good framework to help guide your own and your loved one’s decisions will make the process of being a caregiver easier.

During this online “lunch and learn” class, AARP will share five key steps in such a framework, designed to help you begin talking about values and preferences before care...
is needed, assemble a caregiving team and make a plan to take care of yourself, too, for example. You will also have the opportunity to connect with other family caregivers, exchange tips and advice, and learn about resources available to you and your loved ones.

Please note that you must be signed into your AARP account or create an account to register. AARP membership is not required to create an account. Please do not opt out of event-related emails, as you will be emailed a link to join the class via Zoom prior to the event.

Contact AARP California at kritualo@aarp.org for more information.

To register for this event, click the red button below.

February 15th Community Call to Plan for National Healthcare Decisions Day

February 15, 2023 | 12:00 PM - 1:00 PM ET | Online

The Conversation Project invites healthcare organizations from around the U.S. to participate in a community call on February 15th to facilitate planning for National Healthcare Decisions Day. NHDD is an annual series of events held around the country on April 16 that aims to empower patients, caregivers, and providers to engage in shared healthcare decision-making and advance care planning.

To learn more or to register for the call, click the red button below.

Understanding PTSD

February 15, 2023, 1:00 PM – 2:00 PM ET | Online

Trauma impacts everyone differently, depending on the nature of the trauma, presence or lack of social supports, access to treatment, and coping strategies. Join Jaymi Dormaier for a one-hour seminar that will provide an accessible guide to understanding what causes Post Traumatic Stress Disorder, its symptoms, co-occurring disorders, and treatment options. Attendees will learn practical tips for managing symptoms and helping others.

About the instructor: Jaymi Dormaier is a Licensed Master Social Worker with ten years of experience in the mental health field. In Jaymi's career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction.

Fine print: Certificates of attendance are provided at no cost. CEUs are not provided. Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.

To register for this event, click the red button below.
Many Faces of Anxiety

February 15, 2023, 6:30 PM – 8:30 PM ET | Online

Join Victoria Medeiros and Ambreen Agha (Child and Family Therapists) on February 15, 2023 for a workshop whose goal is to provide valuable information to support caregivers of children and adolescents who experience anxiety. Topics include: Understanding different types of anxiety, causes, how the mind and brain are connected, coping strategies for caregivers; and what caregivers can do to help.

To register for this event, click the red button below.

Coping with Stress as a Caregiver

Wednesdays, February 15 - March 8, 2023, 3:00 PM – 4:00 PM ET | Online

It’s common for caregivers to sacrifice their own well-being while caring for others – and we’re here to help you prioritize yourself. While caregivers are often compassionate and giving individuals, we too need time for cultivating our own wellness. You’ve likely heard the saying before that “you cannot pour from an empty cup.” Taking care of ourselves and properly managing stress can help improve our lives – both in and out of our caregiving roles.

Join us for a 4-part workshop series for caregivers – focused on strategies for self-care and connecting with others to find support.

Learn how to use the stress-mapping model to cope with stress, restore your well-being, and safeguard your passion for this work.

Sessions are held virtually on Wednesdays from 3:00 to 4:00 pm ET on the following dates:
February 15th & 22nd, March 1st & 8th

Topics Include:

*Balancing care for self with care for others
*Mapping early warning signs of stress
*Supporting one another with the implementation of self-care strategies

Yvette Garcia, M.A. has over 10 years of experience in supporting individuals to stay in touch with their personal “why” and bringing out the best in themselves while navigating the stressors of work and everyday life.

To register for this series, click the red button below.

Grant Opportunity for Serving Holocaust Survivors, Older Adults, and Their Family Caregivers

Deadline to submit Letter of Intent to Apply: February 16, 2023

The Jewish Federations of North America’s Center on Holocaust Survivor Care and Institute on Aging and Trauma is seeking proposals for the Innovations Program to expand person-centered, trauma-informed (PCTI) services for Holocaust survivors, older adults with a history of trauma, and their family caregivers. PCTI care infuses knowledge about trauma into agency programs and procedures to promote the well-being and empowerment of trauma survivors.

Successful applicants will join a prestigious cohort of subgrantees that are developing and sharing models of PCTI.

Organizations throughout the United States that serve Holocaust survivors, diverse populations of older adults with a history of trauma, and/or their family caregivers are encouraged to apply.

If you have questions, please contact Aging@JewishFederations.org. To learn more, click the red button below.

Navigating Mental Health Crisis in Childhood: Strategies
Mental health conditions are very common. Research shows that 1 in 6 children or adolescents will experience a mental health condition in any given time. Additionally, 50% of all lifetime mental health conditions begin before the age of 14 and 75% start before the age of 24. However, identifying warning signs or symptoms and seeking treatment early can make a difference in reducing the impact of a mental health condition. As a parent or caregiver of a child under the age of 18 with a mental illness, navigating the mental health service delivery system can be complex and daunting.

Join the National Alliance for Mental Illness (NAMI) Greater Cleveland for Navigating Mental Health Crisis in Childhood: Strategies for Parents and Caregivers on Thursday, February 16 at 12pm via Zoom. Facilitated by Dr. Mackenzie Varkula, a psychiatrist specializing in child and adolescent mental health and a board member with NAMI Greater Cleveland, this presentation will provide clinical expertise on common mental health conditions experienced by children and adolescents. The presentation will also outline strategies for navigating the mental health care system for your minor child with a mental illness, especially when your child may be in mental health crisis or experiencing suicidal ideation. Time will be allotted for Q&A where attendees can ask specific questions of the presenter.

To register for this event, click the red button below.

Caregiver Learning Workshop:
Estate and Elder Law Planning

Join Rebecca L. Wilson (Attorney, Myers Billion LLP Law Firm) on February 16th that will cover estate planning and elder law tools that can help you get your ducks in a row. She will focus on tools that enable caregivers to handle issues that arise, from paying bills to making medical decisions. She will discuss ways to create a plan that ensures an individual’s wishes are carried out, both during any incapacity and on death. She will also cover the consequences of failing to put together a plan ahead of time and the options that remain when emergencies arise.

For more information, contact Leacey Brown, SDSU Extension Gerontology Field Specialist, at 605-394-1722 or leacey.brown@sdstate.edu.
Caring for Those Who Care: Meeting the Needs of African American and Black Caregivers

February 16, 2023 | 1:00 PM - 2:00 PM ET | Online

Welcome to "Caring for Those Who Care: Meeting the Needs of African American and Black Caregivers," a free training session hosted by the Diverse Elders Coalition in collaboration with the National Caucus and Center on Black Aging, Inc.

This training is offered to healthcare, social service providers, and aging professionals. By attending this training, you will:

• Identify and address the unique needs and caregiving realities of unpaid African American and Black family caregivers
• Gain an understanding of how a lack of culturally and linguistically appropriate services impact family caregiver experiences and health outcomes
• Deepen cultural awareness and learn best practices on the provider level to better support African American and Black family caregivers.

Training Details
• This training will be delivered live over Zoom from 1:00pm - 2:30pm EST.
• This training is 90-minutes long and will include Q&A at the end.
• Live Transcription will be available.
• This session will not be recorded.

Trainers:
*Keisha Lewis (she/her), Health Program Liaison, National Caucus and Center on Black Aging, Inc.
*Nina Darby (she/her), Training Manager, Diverse Elders Coalition

Questions? Contact Nina Darby at ndarby@diverseelders.org.

Building a Treatment and Support Team with Your Loved One

February 16, 2023 | 7:00 PM - 8:00 PM ET | Online

No one should have to go through depression on their own — neither you the caregiver nor your loved one.

Tune in on February 16th for Part 2 of a workshop being held by Families for Depression Awareness, "Creating a Circle of Support with Your Loved One." This session will highlight the importance of the support network for both the caregiver and the person living with depression.

To register for this event, click the red button below.

CREATE A PLAN FOR RECOVERY DURING CAREGIVING

February 21, 2023 | 1:00 PM - 2:00 PM ET | Online

After an intense period, like a hospitalization or decline, you and your caree deserve a Recovery Plan. Join Denise Brown on February 21st for an online session about planning for a period of time after your caregiving crisis for your mind, body and spirit to recover.

Denise began helping family caregivers in 1990 and launched one of the first online caregiving communities in 1996. She managed the community until its sale in March 2020 in order to focus on her training and development programs. Denise began helping her father in 2004 after his bladder cancer diagnosis. She also helped care for her mother for seven years until her death in August 2022.

To register for this event, click the red button below.

WHY DEMENTIA IS DIFFERENT FOR EVERYBODY

February 22, 2023 | 8:30 AM - 10:00 AM ET | Online

Dementia affects each person in a different way, depending on multiple factors. These factors can include neurology, physical health, personality, our biography and background and the social environment in which we live. The signs and symptoms of dementia can therefore be quite different depending on the individual.

Did you know that there are more than 100 types of dementia? Understanding the different
types of dementia, how they are diagnosed and their effects on different people is important in providing the best care for the person with dementia.

Presented by Dementia Carers Count in the UK, this introductory course on February 22nd, looks at the different factors that affect a person’s experience of dementia and how these might influence the role of the carer.

Why join this session?

Whether the person you care for has a formal diagnosis or not, this session is for you. By better understanding dementia, you will be better equipped to deal with the challenges you both might have to face.

The course is for you if you would like to …

- Gain a better understanding of your friend or family member
- Learn about the different factors which can contribute to a person’s experience of having dementia
- Understand why no two people with dementia have the same experience
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment.
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

Information for Caregivers of People on Kidney & Liver Transplant Waitlist

February 22, 2023 | 12:00 PM - 1:00 PM ET | Online

If you are caring for someone who was recently diagnosed with end stage kidney or liver failure or is currently on the kidney or liver transplant waitlist, this interactive webinar may help.

Presented by UHN's Centre for Living Organ Donation, this session will provide an overview of the referral process, pathways to transplant, resources for caregivers and an opportunity for questions and answers.

Pre-registration is required. A follow-up email containing webinar login/call-in details will be sent to all registrants.

If you have questions or would like more information about these sessions, please email livingorgandonation@uhn.ca.

To register for this event, click the red button below.

Disparities in Dementia Care

February 22, 2023 | 2:00 PM - 3:00 PM ET | Online

Join AARP virtually for a thought-provoking session on inequities in dementia care and how care can be made more inclusive.
About the Event

Alzheimer’s disease and other forms of dementia disproportionately affect older Black and Hispanic Americans compared to older whites, according to the Alzheimer’s Association.

Dr. Carl V. Hill, chief diversity, equity, and inclusion officer for the Alzheimer’s Association, will discuss how recent research ties poor social determinants of health and health equity issues to disproportionate rates of dementia in minority populations. He’ll also examine the importance of diverse participants and perspectives in Alzheimer’s disease research – and what comes next to foster more inclusive research. There will be time for questions.

This event is being hosted by Insight Memory Care Center in Fairfax, Virginia, and will be offered in-person in Fairfax and online for virtual participation. You will be given the opportunity to select your attendance option.

Please do not opt out of event-related email, as you will be emailed a link to join the presentation prior to the event. Note that the information you provide on the host’s platform shall be governed by the host organization’s privacy policies.

Contact Melissa Long at melissa.long@insightmcc.org for more information.

To register for this event, click the red button below.

Challenges Faced by African American Caregivers

February 23, 2023 | 12:00 PM - 1:00 PM ET | Online

In honor of Black History Month, AARP North Carolina has partnered with Shevel Mavins and Kaii Marie Robertson, co-founders of the Behavioral Health Mind Body Academy, to recognize the importance of caregivers in the African American community and explore their unique challenges. Studies show that as African Americans age, they experience a greater incidence of chronic health conditions than their white counterparts. A 2016 CIGNA Health Disparities report found that:

- Four in 10 Black men aged 20 or older have high blood pressure, a rate 30 percent higher than that of white men. In Black women, the rate is 60 percent higher than for white women.
- Black Americans are more than twice as likely as whites to suffer from Alzheimer’s disease and other kinds of dementia. Research data also shows racial bias in pain assessment and treatment recommendations for Black patients.

Because racial bias is still a common occurrence in our health care system, it is critical for caregivers to know how to advocate effectively for their loved ones. Learn how you can ensure that your loved one is receiving quality care, and how to discuss the importance of advance care planning. (Meanwhile, caregivers themselves may be coping with chronic disease at higher rates.)

Please note that you must be signed in to your AARP.org account or create an account to register. AARP membership is not required to create an account. Please do not opt out of event-related email, as you will be emailed a link to join the presentation prior to the event.

Contact AARP North Carolina at ncaarp@aarp.org for more information.

To register for this event, click the red button below.
Money Matters: Making Financial Plans After a Diagnosis of Dementia

February 23, 2023 | 5:00 PM - 6:00 PM ET | Online

After receiving a diagnosis of Alzheimer’s disease or another dementia, the need for and cost of future care may not be immediately considered.

Financial planning often gets pushed aside because of the stress and fear the topic evokes. However, financial stress can be reduced by preparing for care costs. The sooner planning begins, the more the person with dementia may be able to participate in decision-making.

Join Robert Wroblewski of Treece Financial Group for this educational webinar to learn 10 key tips to:

- help address what long-term costs may be faced
- how to cover costs
- considerations for individuals with younger-onset
- where to find support services
- and more.

Rare Disease Day at NIH 2023

February 28, 2023 | 9:00 AM - 5:00 PM ET | Online

Sponsored by the National Center for Advancing Translational Sciences (NCATS) and the National Institutes of Health (NIH) Clinical Center, Rare Disease Day at NIH will be held both in-person at the NIH main campus in Bethesda and virtually on Tuesday, Feb. 28, 2023, from 9 a.m. to 5 p.m. EST. Rare Disease Day at NIH seeks to bring together a broad audience including patients, patient advocates, caregivers, health care providers, researchers, trainees, students, industry representatives, and government staff.

This year’s event will feature panel discussions, rare diseases stories, in-person and virtual exhibit and scientific posters. An event app will be available with engagement features and ways to connect with others.

The event is free and open to the public.

The Brain and Dementia

March 6, 2023 | 8:30 AM - 10:00 AM ET | Online

Understanding how dementia affects different parts of the brain is useful, particularly if you are looking after someone with dementia.

The brain is the most complex organ in the body and produces every thought, memory and action, experience and feeling we have. The more we can understand the brain, the more sense emotions and behavior will make.

You may already know that dementia is not just the brain getting older. It is caused by damage to the brain that can produce unpredictable results and symptoms.

But, did you know that there are more than 100 types of dementia? The condition affects memory, emotions, communication, behavior, vision and motor skills – and it worsens over time.

Tune in on March 6th for a presentation hosted by Dementia Carers Count that will help you learn about the different types of dementia and how they can affect the brain.

To register for this event, click the red button below.

Understanding Compassion Fatigue and Burnout

March 7, 2023 | 1:00 PM - 2:00 PM ET | Online

Does compassion cause suffering? When does it go too far and how can caregivers protect their own wellbeing? Learn the warning signs, who is at risk, and how to restore your emotional energy with a licensed therapist.

About the instructor: Jaymi Dormaier is a Licensed Master Social Worker with ten years of experience in the mental health field. In Jaymi’s career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction.

Fine print: Certificates of attendance are provided at no cost. CEUs are not provided. Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.

To register for this event, click the red button below.

Keeping the Communication Going

March 8, 2023 | 8:30 AM - 10:00 AM ET | Online

Join Dementia Carers Count on March 8th for a discussion about how dementia can affect language and communication. There will be an opportunity to explore the emotional impact of a breakdown in communication / relationships for a carer and the person with dementia and identify strategies to help establish effective and meaningful interactions.

This session is for you if:

• you would like to gain a better understanding of how communication can be affected for a person with dementia
• you would like to learn about different strategies to support a person's ability to communicate and understand
• you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
• you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

Supporting Your Adult Child Through Their Cancer Diagnosis and Treatment

March 9, 2023 | 2:00 PM - 3:00 PM ET | Online

This presentation will address the emotional and physical impacts on parents who have young adults with cancer. It will explore common stressors and concerns including the burnout that arises while caregiving for young adults with cancer. It will also identify coping strategies and interventions to help parents navigate through their adult child's cancer journey, including issues surrounding being a grandparent if the young adult has children.

This presentation is aimed at adult parents of young adults who have cancer but all are welcome to attend. There will be time to ask questions, as well as connect with other parents/grandparents.

Presenter Bio:

Sam Fortune is an oncology social worker, and the Women’s Cancers Program Coordinator at CancerCare. She provides counseling and support to people coping with cancer, caregivers of cancer patients, and people who have experienced the loss of a loved one. Sam also develops and executes programmatic activities for the Women’s Cancers Program, which cater to specific needs within the community. Furthermore, Sam participated in several national presentations on various Women’s Cancers topics and has
Planning for Getting Paid for Caring for a Family Member

March 10, 2023 | 2:00 PM - 3:00 PM ET | Online

The direct care workforce shortage means many families simply can’t find a direct care worker to hire. More and more families may use the caregiving budget to reimburse a family member for providing care. With a new planning tool provided by The Caregiving Years Training Academy, families can create plans to hire a family member and be empowered to have effective conversations with a financial planner and elder law attorney to ensure that they created the right solution for their family.

Join Denise Brown for a 50-minute meeting to explore the possibility of paying a family member (including yourself) for providing care.

Before joining us:

- Download our Paying for Care Planning Tool to use during our 50-minute session.

Denise began helping family caregivers in 1990 and launched one of the first online caregiving communities in 1996. She managed the community until its sale in March 2020 in order to focus on her training and development programs. Denise began helping her father in 2004 after his bladder cancer diagnosis. She also helped care for her mother for seven years until her death in August 2022.

Comfort for Caregivers: Strategies for Dealing with Caregiver Stress

March 14, 2023 | 1:00 PM - 2:00 PM ET | Online

Caring for a loved one strains even the most resilient people. Tune in on March 14th for a workshop presented by HopeHealth Hospice & Palliative Care that will discuss strategies for dealing with caregiver stress and show attendees effective ways to preserve your own health and well-being.

This workshop is part of a series presented by HopeHealth Hospice & Palliative Care designed to provide education, support, and resources for those caring for loved ones with an illness. There will be time for Q&A following each presentation.

To register for this event, click the red button below.

Preparing for an Outing with the Person You Care For

March 20, 2023 | 8:30 AM - 10:00 AM ET | Online

Tune in on March 20th for an online session hosted by Dementia Carers Count that will take a look at some of the challenges of going out in the community, both for the person with dementia and those who are caring for them.

This event will explore the importance of going out for both the person living with dementia and their carer. It will also look at ways to prepare and support someone with dementia before an outing and discuss about resources and support that may be helpful.

The session is for you if you would like to…

- gain some ideas for supporting the person and reduce your own fear or embarrassment of potential situations
- spend time with experienced health and care professionals who will answer your questions in a safe, supportive environment
- You would like to meet other people who are taking care of a friend or family member with dementia who may be in a similar situation

To register for this event, click the red button below.
2023 NIA Dementia Care and Caregiving Research Summit

March 20th - 23rd, 2023 | 11:00 AM to 4:00 PM ET | Online

The 2023 National Research Summit on Care, Services, and Supports for Persons Living with Dementia and their Care Partners/Caregivers will build on progress of the previous Summits to review research progress, highlight innovative and promising research, and identify remaining unmet research needs with input from the research community, persons living with dementia (PLWD) and their care partners.

The Summit will be held virtually from March 20-22, 2023 from 11 a.m. to 4 p.m. Eastern time each day. Submitting this registration form will enable you to join any or all three days of the Summit proceedings.

Please see the Summit webpage for more information: [www.nia.nih.gov/2023-dementia-care-summit](http://www.nia.nih.gov/2023-dementia-care-summit)

To register for the summit, click the red button below.

Making the decision to stop driving and the transition to non-driving is challenging and complex, especially for drivers living with dementia and their care partners. In this webinar, Drs. Gary Naglie and Mark Rapoport, who lead a team of researchers focused on dementia and driving, will describe the development and evaluation of the Driving and Dementia Roadmap (DDR - www.drivinganddementia.ca) - a recently launched online educational resource. They will also demonstrate how to use the DDR, whether you are a person living with dementia, a care partner/friend or a healthcare/service provider supporting others through this process.

**This event will not provide information or training on how to assess an individual’s driving ability**

To register for this event, click the red button below.

**APRIL**

Heart Health for Family Caregivers

April 11, 2023 | 2:00 PM - 3:30 PM ET | Online

Often, family caregivers ignore their own health while caring for loved ones. Keeping your heart healthy by de-stressing and making small lifestyle changes can significantly reduce the impact of caregiving on your health.

Join the American Heart Association on April 11th for this edition of Vantage Agings’ monthly event, Caregiver Solutions, intended to help caregivers find support and resources.

To register for this event, click the red button below.
Understanding and Responding to Dementia-Related Behaviors

April 11, 2023 | 4:00 PM - 5:00 PM ET | Online

Behavior is a powerful form of communication and is one of the primary ways for people with dementia to communicate their needs and feelings as the ability to use language is lost. However, some behaviors can present real challenges for caregivers to manage. Join the Kadlec Neurological Resource Center on April 11th to learn how to decode behavioral messages, identify common behavior triggers, and learn strategies to help intervene with some of the most common behavioral challenges of Alzheimer's disease.

To register for this event, click the red button below.

Health and Aging Policy Fellowship 2023-2024

Call for Applications

Deadline to apply: April 17, 2023

With an aging population, one of the greatest challenges for the U.S. is ensuring that policies provide the best possible quality of life for all across all dimensions of society – from the communities where we live, the transportation we depend on, the food we eat, and the health care we receive. Success will require the translation of cutting-edge science and practical clinical experience into sound health policy. The goal of the Health and Aging Policy Fellows Program is to provide professionals in health and aging with the experience and skills necessary to help lead this effort, and in so doing, shape a healthy and productive future for older Americans.

The Health and Aging Policy Fellows Program offers two different tracks for individual placement: (1) a residential track that includes a 9-to-12-month placement in Washington, D.C. or at a state agency (as a legislative assistant in Congress, a professional staff member in an executive branch agency or in a policy organization); (2) a non-residential track that includes a health policy project and brief placement(s) throughout the year at relevant sites. The project may be focused at a global, federal, state or community level.

In addition, through our partnership with the veterans health administration, VA employees...
can participate in the VA track as a non-residential fellow.

Core program components focused on career development and professional enrichment are provided for fellows in all tracks.

To learn more about the fellowship, click [here](#). To apply, click the red button below.

**PATIENT AND CAREGIVER STUDIES**

**Caregivers Use of Alternative Strategies in Managing Dementia**

You are invited to participate in a study that is being used to collect data for a research project for a Speech-Language Pathology degree at Missouri State University. This survey is intended to be administered to caregivers of persons with Dementia and will take 5-10 minutes to complete. The study will examine the caregivers’ perceptions of complimentary/alternative strategies as well as the types of strategies that have been implemented to help manage Dementia in the person under their care.

By exploring these topics, we hope to learn more about caregivers’ knowledge on types of complimentary/alternative strategies that are available, examine strategies that are being used the most within this population and if there is any correlation in outcome of specific strategies (e.g., improvement or decline).

Areas that will be examined are vocalness, behaviors, independence, and activeness before and after implementation of strategies that are used. To that end, the results from this study may be presented at professional conferences and/or submitted for publication in a scholarly journal. If you agree to participate in this study, you will be asked to respond to a few questions regarding personal information (e.g., relation to persons with Dementia under your care).

If you have any questions or concerns, please contact the study’s lead investigator, Dee Telting, at dtelting@missouristate.edu. If you are interested in participating in this study, click the red button below.

---

**Interview about Family Relationships and Wellbeing in Dementia**

If you are a caregiver to a family member with dementia, you’re invited to participate in an interview about your caregiving experiences and wellbeing. The interview will last approximately 60-90 minutes and can be completed over the phone or via Zoom.

You will receive a $10 Amazon gift card for participating. In order to participate you must:

- Be a caregiver to a FAMILY MEMBER living with dementia
- Be at least 18 years old
- Be able to read and speak English

To sign up for an interview, click the red button below.
Co-Designing a Stress Management Toolkit for Families Living with Dementia

Researchers at Duke University would like to learn more about stress experienced by people living with dementia and their care partners, as well as about how families manage stress at home.

The goal of the project is to develop a toolkit of different things that people with dementia and their care partners can use on a daily basis to manage stress at home.

Focus groups will be held with dyads of people with dementia and their care partners together, and with care partners only. Groups will be held remotely using Zoom and are anticipated to last about 60-90 minutes. Participants will be compensated for their time.

Those that are interested in participating should call Melissa Harris at (405)513-1271 or email her by clicking on the red button below.

Mental Fatigue and Self-Care in Informal Oncology Caregivers

Are you an unpaid caregiver of a person living with cancer? Are you 18 years old or older? We want to hear about your experiences as a caregiver.

A research study is being conducted at the Medical University of South Carolina to understand how mental fatigue affects informal caregivers of persons living with cancer and determine if mental fatigue, participating in self-care activities, and general caregiver quality of life are related. We are seeking volunteers to share their experiences to help drive research within the cancer caregiver community. The study involves completing surveys that are expected to take 25-35 minutes.

It is our hope that this study will help guide future research to identify ways healthcare professionals can help caregivers handle the stresses of caregiving.

For more information or to see if you qualify for the study, click the red button below.
Communication in the Family

Hello! You are invited to be interviewed about your experiences and communication patterns as someone who currently (or in the past) cares for your family member living with Alzheimer’s disease or another related dementia (ADRD). There are potentially things you are uncertain about regarding caring for your family member, and we are interested in how you communicate to manage these uncertainties. Uncertainty means the inability to predict what will happen or the unknown. For example, you might worry about your loved one’s well-being because their dementia makes their behavior unpredictable.

You are eligible if you:

- Are at least 18 years old
- Used to or currently help care for one of your family members who lives/d with ADRD (by care, this includes but is not limited to: Eating, bathing, transferring, managing finances, medications, chores, shopping, etc.)

If you are interested, click the red button below to get started on scheduling your interview and answering some demographic questions.

LEARN MORE

Participate in Patient and Care Partner Survey on Post-transplant Journey

PatientsLikeMe (PLM), a patient community and digital health management platform, and Takeda, a global, values-based, R&D-driven biopharmaceutical leader, are conducting a research study to better understand the post-transplant journey of patients and care partners to help determine any knowledge gaps and opportunities to better connect. The three-phase study seeks to better understand the transplant patient journey, particularly if they’ve experienced cytomegalovirus (CMV) infection, and identify changes in care journey experiences to help connect patients and their care providers.

PatientsLikeMe is a health tracking and learning platform embedded within an online social network. As of early 2020, the PLM community consists of ~860,000 members representing a wide range of conditions. The underlying PLM platform is designed, and continues to be optimized, to foster peer support and disseminate knowledge, including real-world insights. Members share personal stories about their health journey, engage with others who are (or were) in their situation, monitor symptoms, evaluate treatments, and track outcomes.

Participants will be compensated for their time and must:
1. Be 18 years of age or older
2. Be a patient or care partner of a patient who has had a solid organ transplant or hematopoietic stem cell transplant within the last three years.

If you fit the criteria below and want to share your experience via a written survey, click on the red button below.

Varoglutamstat for Early-Stage Alzheimer's Disease

Start: November 15, 2021
End: November 30, 2023
Enrollment: 414

This study is being conducted by the University of California at San Diego.

What Is This Study About?

This Phase 2 study will test the safety and effectiveness of varoglutamstat to reduce amyloid deposits in older adults with early-stage Alzheimer's disease. In the first phase of this study, participants will be randomly assigned to receive one of three dosage levels of the study drug or a placebo by tablet twice a day for six months. In the second phase, participants will take the highest safe dose identified in the first phase and researchers will assess the longer term effects of the study drug up to 72 weeks. At the end of each study phase, researchers will measure any changes in brain activity, and cognitive and daily functioning. They will also collect blood and cerebral spinal fluid samples to analyze drug absorption and any changes in the levels of amyloid protein. Throughout the study, participants will be monitored for any adverse health events.

Do I Qualify To Participate in This Study?

Minimum Age: 50 Years
Maximum Age: 89 Years

Must have:

- Diagnosis of mild cognitive impairment or early-stage Alzheimer's disease
- Mini-Mental State Examination score of 20 to 30 at study screening
- Montreal Cognitive Assessment score < 26 at screening
- Clinical Dementia Rating global score of 0.5 or 1 with memory score of > 0.5 at study screening
- Presence of Alzheimer's disease proteins in cerebrospinal fluid
- MRI brain scan within six months of study screening consistent with a diagnosis of Alzheimer's disease
- Study partner who has frequent interaction with the participant (> 3-4 times per week) and who is available to attend all clinic visits and can assist the participant with study procedures

Must NOT have:

- Any significant neurodegenerative disease, other than Alzheimer’s (e.g., Parkinson's disease, Huntington's disease, vascular dementia, Creutzfeldt-Jakob disease, Lewy Body dementia, progressive supranuclear palsy, AIDS, or normal pressure hydrocephalus)
- Severe liver disease
- Participation in another clinical trial for an experimental drug with at least one dose of study drug taken 90 days prior to the start of the study; confirmed use of a placebo is acceptable
History of significant medical or psychiatric conditions that could interfere with study participation including:
- Moderate or severe skin reactions to medications, or current moderate to severe skin disease
- Major depression within six months prior to the study screening
- Schizophrenia
- Uncontrolled bipolar disorder within five years prior to the study screening
- Seizures within two years prior to the study screening
- Any condition that could make having the following study procedures unsafe:
  - Lumbar puncture (e.g., skin infection on lower back, trauma to lower back, bleeding disorder or taking blood thinners)
  - MRI brain scan (e.g., metal shrapnel, heart pacemaker, severe claustrophobia)

To learn more about this study, call Archana Balasubramanian at (858)246-1277 or email her by clicking on the red button below.

Online Sleep Education for Rural Alzheimer's Caregivers

Start: Feb. 2, 2022
End: March 31, 2026
Enrollment: 100

This study is being conducted by the University of Missouri.

What Is This Study About?

This study will test whether an online educational program, named NiteCAPP, improves sleep, mood, and overall well-being of rural caregivers of people living with Alzheimer's disease. Participants will be randomly assigned to complete one of two versions of the online program. All participants will attend four weekly sessions and four bimonthly review sessions. Each session will be online and take less than 45 minutes to complete. Throughout the two-month study, participants will record their sleep, fatigue, pain, and medication use in daily electronic diaries. Immediately after the study, then six months and one year later, participants will provide blood samples, undergo electrocardiograms, and answer questions about their stress, sleep, and experience with the program.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years
Maximum Age: N/A

Must have:

Caregiver participants:
- Living with participant with Alzheimer's disease
- Able to read and understand English
- Diagnosis of insomnia, with:
  - Sleep complaints for > six months
  - Adequate opportunity and circumstances for sleep
  - Difficulty falling asleep, difficulty staying asleep, or waking too early
  - Mood, memory, social, or work problems due to insomnia
  - Takes > 30 minutes to fall asleep or wake up
- If taking prescribed or over-the-counter sleep medication, dosage must be stable for at least six months prior to starting study

Participants with Alzheimer's disease:
Diagnosis of probable or possible Alzheimer's disease
One or more nighttime behavioral problems that occur at least three times a week, based on screening questionnaire
Able to wear sleep sensor on wrist

Must NOT have:

Caregiver participants:
- Cognitive impairment, with:
  - Telephone Interview for Cognitive Status score < 25
- Bipolar or seizure disorders
- Any major psychiatric disorder other than depression and anxiety

All participants:
- Sleep disorder other than insomnia, such as sleep apnea, with:
  - Sleep disorders questionnaire sleep apnea scale score < 32
  - Apnea/Hypopnea Index score > 15
- Currently taking psychotropic or other medications (e.g., beta blockers) that alter sleep
- Currently receiving any treatment for sleep or mood, other than the study program

To learn more or participate in this study, call Christina McCrae at (573)882-0982 or email her by clicking on the red button below.

Standardization of Tau PET Brain Imaging for Alzheimer’s Disease

Start: Nov. 23, 2021
End: May 31, 2027
Enrollment: 620

This study is being conducted by the University of Pittsburgh Medical Center.

What Is This Study About?

Abnormal tau protein forms long fibers inside brain cells and is a hallmark of Alzheimer's disease. This Phase 2 study will compare how two different PET scan tracers (Flortaucipir and MK-6240) detect tau protein in the brains of older adults with normal cognition, mild cognitive impairment, or Alzheimer's disease. At the start of the study and 18 months later, participants will undergo PET scans for tau and amyloid (another protein associated with Alzheimer's) and an MRI brain scan. At both study visits, participants will also provide blood samples and complete memory and thinking tests. The researchers will compare tau detection by the two tau PET tracers and develop a standard method of measuring tau to help diagnose Alzheimer's.

Do I Qualify To Participate in This Study?

Minimum Age: 20 Years
Maximum Age: 90 Years

Must have:

- Normal cognition, mild cognitive impairment, or Alzheimer's disease, based on tests at study screening
- Availability of a dependable person to attend all study visits and answer questions about the participant
- Able to safely undergo repeated MRI and PET brain imaging
- Fluent in a language approved by the study clinic
Must NOT have:

- Women must not be pregnant or breastfeeding
- Any condition that could make study participation unsafe, prevent the participant from completing the study, or interfere with study results
- Taking a medication that could make study participation unsafe, prevent the participant from completing the study, or interfere with study results

To learn more or participate in this study, call Tharick Pascoal at (412)246-5147 or email him by clicking on the red button below.

**Are You a Caregiver for a Person with Dementia Who is Receiving Home Care?**

If you are a caregiver living approximately 2 or more hours away from your care recipient, you may be eligible to participate in a new research study conducted by the LeadingAge Long-Term Services and Supports (LTSS) Center @UMass Boston. The study seeks to evaluate the administration of a non-drug intervention designed to help long-distance caregivers of persons with dementia.

The LTSS Center conducts applied research and dissemination projects aimed at transforming the way aging services and supports are financed, delivered, and experienced by older adults and their families. The Center’s mission is to create a bridge among the policy, practice, and research communities to advance the development of high-quality aging services.

You may be eligible to participate in this study if you:

- Are a caregiver age 21 or older
- Are living about 2 hours or more away from your care recipient
- Have a care recipient with dementia AND who is receiving home care

If eligible, you will receive:

- Individualized support from dementia experts, delivered remotely via the use of a tablet.
- Tailored dementia education and resources
- A new tablet for the study, which is yours to keep

To learn more or participate in this study, email Richard Evan Chunga, the study's Principal Investigator, by clicking on the red button below.
Food and Brain Training to Improve Cognition in Older Adults (MINDSpeed)

Start: January 20, 2019  
End: March 31, 2024  
Enrollment: 180

This study is being conducted by Indiana University and the Regenstrief Institute.

What Is This Study About?

The Mediterranean-DASH Intervention for Neurodegenerative Delay (MIND) diet incorporates the DASH (Dietary Approaches to Stop Hypertension) diet, which has been shown to lower high blood pressure, a risk factor for Alzheimer's disease. This study, named MINDSpeed, will test whether the diet combined with Brain HQ cognitive brain training exercises improves cognitive performance in older adults. All interventions will be conducted through applications (apps) running on a tablet computer device that will be provided to all participants for the length of study. Participants will select foods using an online shopping format on the provided tablet device. Selected foods will be prepared and delivered to each participant by the study team for 12 weeks.

Do I Qualify To Participate in This Study?

Minimum Age: 60 Years  
Maximum Age: N/A

Must have:

- High school education
- English speaking
- Resident of Marion County, Indiana and able to receive food deliveries
- Natural-born U.S. citizen

Must NOT have:

- Living in a nursing home
- Diagnosis of dementia, Alzheimer's disease, cancer with short life expectancy, multiple sclerosis, epilepsy, schizophrenia, bipolar disorder, Parkinson's disease; current chemotherapy or radiation therapy; history of brain tumor, brain surgery, or brain infection; stroke or myocardial infarction within the past 12 months
- Current alcohol consumption of eight drinks per week for women or 15 drinks per week for men
- Poor vision or color blind
- Inability to communicate clearly that could interfere with the study, as determined by the study contact
- Unable or unwilling to provide blood sample at the start of the study
- Tumor, hemorrhage, aneurysm, hydrocephalus, or other significant clinical finding from the brain MRI test at the start of the study

To learn more or participate in this study, call Daniel Clark at (317)274-9292 or email him by clicking on the red button below.
Online Cognitive Behavioral Treatment for Insomnia in Dementia Caregivers

Start: January 1, 2021
End: January 1, 2024
Enrollment: 60

This study is being conducted by the University of Missouri.

What Is This Study About?

Cognitive behavioral therapy for insomnia (CBT-I) is an established treatment for insomnia in adults. This pilot study, named NiteCAPP, will test whether a web-based CBT-I program can reduce insomnia in dementia caregivers. Caregivers will participate in four online CBT sessions on healthy sleep habits and relaxation strategies and will complete a daily electronic sleep diary. Researchers will evaluate sleep quality, as well as levels of anxiety, pain, depression, cognition, caregiver stress, and quality of life.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years
Maximum Age: N/A

Must have:

- Dementia caregiver living with a person with dementia
- Read and understand English
- If currently taking prescribed or over-the-counter sleep medications, dosage must be stable for at least six weeks before study screening visit
- Meets criteria for insomnia diagnosis, including:
  - Symptoms of sleep loss (e.g., fatigue) for more than six months
  - Adequate opportunity and circumstances for sleep
  - One or more of the following: difficulty falling asleep, staying asleep, or waking too early
  - Daytime disruption due to insomnia (e.g., mood, cognition, social relationships, work performance)
  - Insomnia Severity Index score of 9 to 11
  - Time to fall asleep >30 minutes or becoming awake after falling asleep, on three or more nights a week

Must NOT have:

- Cognitive impairment
- Sleep disorder other than insomnia (e.g., sleep apnea)
- Bipolar or seizure disorder
- Major psychopathology (e.g., suicide ideation/intent, psychosis) or severe, untreated psychiatric condition; depression and anxiety acceptable)
- Psychotropic or other medications (e.g., beta-blockers) that affect sleep
- Nonpharmacological treatments for sleep or mood outside of current study

To learn more or participate in this study, call Christina McCrae at (573)882-0982 or email her by clicking on the red button below.
How do we elevate national recommendations to public health action when supporting dementia caregivers? This January 12th webinar hosted by the BOLD Public Health Center of Excellence on Dementia Caregiving (PHCOE-DC) discussed how public health agencies and professionals can help to implement the RAISE National Strategy to Support Family Caregivers. It also explored ways states are adopting RAISE recommendations, and how your agency's work can align with this unprecedented national strategy to support family caregivers of people living with dementia.

Frequently Asked Questions about Caregiving

Caregiving can be overwhelming, especially when you're starting out. Take a deep breath! Then tackle one task at a time.

First, assess your loved one's needs. What types of help are needed? Ask family members and friends to share tasks. Look for resources in your community, such as home health care or adult day care centers. The Eldercare Locator can help you find in-home help; transportation; resources to install ramps, grab bars, or other home modifications; and other resources in your area. It can also help you learn about options for paying for...
Paying for Mental Health Care: Your Questions Answered!

Paying for mental health care is no easy task. Even people with health insurance have trouble finding and paying for mental health care. The situation can feel dire.

A new fact sheet released by Families for Depression Awareness explains issues involved in paying for care and offers practical strategies that help you support your loved one in getting necessary mental health treatment.

To view the fact sheet, click the red button below.

How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

As a long-distance caregiver, you can provide important respite to the primary caregiver and support to the aging family member. First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion.

To learn more, click the red button below.
Dementia-Related Pain: What Caregivers Need to Know

As dementia progresses, so does the likelihood that patients are experiencing pain. Between 50% and 80% of patients with moderate to severe dementia experience pain daily. Many patients receive inadequate treatment due lack of recognition. Alzheimer's disease causes the person to develop a mask-like facial expression. This minimizes typical facial expressions of pain, like a drawn mouth or furrowed brows. Also, patients may have lost the cognitive ability to tell caregivers about their pain with phrases such as "this hurts" or "I am in pain."

To learn more, click the red button below.

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough. How people pay for long-term care — whether delivered at home or in a hospital, assisted living facility, or nursing home — depends on their financial situation and the kinds of services they use.

To learn more, click the red button below.
Taking Care of Yourself: Tips for Caregivers

Taking care of yourself is one of the most important things you can do as a caregiver. Make sure you’re eating healthy, being active, and taking time for yourself.

Caregiving, especially from a distance, is likely to bring out many different emotions, both positive and negative. Feeling frustrated and angry with everyone, from the care recipient to the doctors, is a common experience. Anger could be a sign that you are overwhelmed or that you are trying to do too much. If you can, give yourself a break: take a walk, talk with your friends, get some sleep — try to do something for yourself.

Podcast: Caring for a Parent at the End of Life

Mark Chesnut is a NYC-based journalist, editor, and public speaker. His book, Prepare for Departure, Notes on a single mother, a misfit son, inevitable mortality, and the enduring allure of frequent flyer miles, is about love and care and acceptance – not the infamous acceptance from the 5 stages of grief – but the acceptance that can happen between a mother and son when one of their lives is coming to an end.
This episode of the Doug Center’s podcast “Grief Out Loud” travels to a lot of places, including: What Mark learned about grief from his mother after his father died. How those lessons shaped the way he approached caring for her and grieving her death. How Mark moved into a place of acceptance with his mother for the ways she responded when he came out to her as a young adult. The ways he dealt, and continues to deal with grief, even during the height of COVID, when he was unable to access his usual outlet, travel.

To listen to the podcast, click the red button below.

Optimism Linked to Longevity and Well-being in Two Recent Studies

Optimism is linked to a longer lifespan in women from diverse racial and ethnic groups, and to better emotional health in older men, according to two NIA-funded studies. One study showed that the previously established link between optimism and longevity applies to racially and ethnically diverse populations of women and that the link is only partially due to changes in health behaviors. The other study showed that more optimistic men have fewer negative emotions, due in part to reduced exposure to stressful situations. These findings suggest that increasing optimism may be a way to extend lifespan and improve well-being in older adults.

Podcast: How to Take Better Care of Your Loved Ones

Giving and receiving care—it's a natural part of life. But how do we offer the best possible support for our loved ones? Tune in for this podcast in which TED speakers share ideas on reimagining caregiving.

Guests include dementia care advocate Yvonne van Amerongen, attorney Diana Adams, inclusion advocate Sara Jones, and comedian Bill Bernat.
Helping Children Understand Alzheimer's Disease

When a family member has Alzheimer’s disease, it affects everyone in the family, including children and grandchildren. It’s important to talk to them about what is happening. How much and what kind of information you share depends on the child’s age and relationship to the person with Alzheimer’s.

Talk with kids about their concerns and feelings. Some may not talk about their negative feelings, but you may see changes in how they act. Problems at school, with friends, or at home can be a sign that they are upset. A school counselor or social worker can help your child understand what is happening and learn how to cope.

To learn more, click the red button below.

Managing Money Problems in Alzheimer's Disease

People with Alzheimer’s disease often have problems managing their money. In fact, money problems may be one of the first noticeable signs of the disease.
Early on, a person with Alzheimer's may be able to perform basic tasks, such as paying bills, but he or she is likely to have problems with more complicated tasks, such as balancing a checkbook. As the disease gets worse, the person may try to hide financial problems to protect his or her independence. Or, the person may not realize that he or she is losing the ability to handle money matters.

To learn more, click the red button below.

What Are the Signs of Alzheimer's Disease?

The symptoms of Alzheimer's can vary from one person to another. Memory problems are typically one of the first signs of the disease. Decline in non-memory aspects of cognition, such as finding the right word, trouble understanding visual images and spatial relationships, and impaired reasoning or judgment, may also signal the early stages of Alzheimer's. As the disease progresses, symptoms become more severe and include increased confusion and behavior changes.

Cancer Caregiver Resources Guide

The American Cancer Society Caregiver Resource Guide is a tool for people who are caring for someone with cancer. It can help you:

• Learn how to care for yourself as a caregiver.
• Better understand what your loved one is going through.
• Develop skills for coping and caring.
• Take steps to help protect your health and well-being.
• Find important resources for getting help and support.

To view the guide, click the red button below.
If you regularly help an older veteran with tasks like dressing, bathing, grocery shopping, transportation, and preparing meals, you could be considered a caregiver.

More than 5.5 million people serve as informal caregivers for older and/or disabled veterans across America—many of them without any kind of compensation.

Caring for a veteran comes with special challenges, and burnout is a very real possibility. That’s why it’s important to take advantage of the caregiver support resources available to you.

The Journey Map of a Sickle Cell Disease Caregiver

The Journey Map of a sickle cell disease (SCD) is a blueprint of the encounters an individual can go through as a caregiver to a loved one with SCD. This diagram was created by Sick Cells and used during the May 2021 Roundtable on Resources for SCD Caregivers in an effort to visualize an individual’s experience and align resources and support.

To view the SCD Journey Map, click the red button below.

VIEW THE MAP

Epilepsy Resources for Caregivers

Whether you’ve been a caregiver for years or if your duties as a caregiver are just beginning, it’s comforting to know that there are epilepsy resources to help you navigate your loved ones’ journey.

Many resources exist to connect you with others who are experiencing something similar. There are also support services that can help when you may be feeling a little lost. No matter your situation, there are people and places you can turn to when you need a helping hand.
Informal Caregivers in Cancer

Being a caregiver means helping with the daily needs of another person. An informal caregiver is usually a relative or friend who may or may not live in the same house as the person they are caring for. A formal caregiver, such as a nurse, is paid and has training to care for a patient. Informal and formal caregivers help people with cancer during and after treatment in many ways.

The NIH's National Cancer Institute has put together a fact sheet about the roles, needs, and burdens of informal caregivers who are caring for a person with cancer. To view the fact sheet, click the red button below.

What Parents and Caregivers Need to Know About the New Pediatric Obesity Guidance

For the first time in 15 years, the American Academy of Pediatrics (AAP) has updated its guidance on obesity in children, recommending a more proactive approach.

According to the Centers for Disease Control and Prevention, nearly 20% of children and adolescents in the United States are obese—meaning that their body mass index (BMI) is at or above the 95th percentile of the CDC growth chart. For children, BMI is an age- and sex-specific measurement using height and weight that helps assess body fat. Children who are obese are at higher risk for physical health issues, including heart disease and type 2 diabetes, as well as mental health issues, such as anxiety and depression.

To learn more, click the red button below.

Understanding Chronic Sorrow
There is sneaky grief and loss that caregivers of children with mental illness experience. Chronic sorrow, as it has been called, is "ambiguous, one that rarely subsides over time, and is rarely acknowledged." As a caregiver of children who have struggled with mental illness, I have learned to celebrate the joy and stay in deep gratitude for healthy times, yet there is a constant dull ache that persists, and chronic sorrow gives this a name for me. In my professional role, I have listened as chronic sorrow creates an additional barrier for caregivers, complicating the stress and anxiety of caring for their children.

Blood Test for Early Alzheimer's Detection

One of the first stages of Alzheimer’s disease involves formation of toxic aggregates, called oligomers, of the protein amyloid beta (Aβ). These oligomers can start to form more than a decade before symptoms appear and before other known disease markers form. The ability to detect these oligomers would permit early disease diagnosis. This would make strategies to intervene before irreparable brain damage occurs possible.

Your Body's Disease Defenses

Every day while you eat, sleep, work, and play, battles are being fought throughout your body. You rarely feel it. But bacteria, viruses, and other microbes are constantly invading from the outside world.

Your body has a defense system for such invaders. It's called the immune system. Your immune system is made up of trillions of cells and proteins. These are found in your blood and every organ of your body. The immune system learns and changes over your lifetime—even before birth.

Adapting Activities for People With Alzheimer's Disease

Doing things we enjoy gives us pleasure and adds meaning to our lives. People with Alzheimer's disease need to be active and do things they enjoy. However, it's not easy for them to plan their days and do different tasks.
People with Alzheimer’s may have trouble deciding what to do each day, which could make them fearful and worried or quiet and withdrawn, or they may have trouble starting tasks. Remember, the person is not being lazy. He or she might need help organizing the day or doing an activity.

Providing Care for a Person With a Frontotemporal Disorder

People living with frontotemporal disorders, sometimes called frontotemporal dementia, can have a range of symptoms, including unusual behaviors, emotional problems, trouble communicating, and difficulty walking. Caring for someone with a frontotemporal disorder (FTD) can be hard, both physically and emotionally. Caregivers may face challenges with managing the medical and day-to-day care, as well as changing family and social relationships, loss of work, poor health, stress, decisions about long-term care, and end-of-life concerns.

To learn more about, click the red button below.

Long-Distance Caregiving: Twenty Questions and Answers

If you live an hour or more away from a person who needs care, you can think of yourself as a long-distance caregiver. This kind of care can take many forms—from helping with finances or money management to arranging for in-home care, from providing respite care for a primary caregiver to creating a plan in case of emergencies.

Many long-distance caregivers act as information coordinators, helping aging parents understand the confusing maze of new needs, including home health aides, insurance
Healthy Eating and Alzheimer's Disease

Eating healthy foods helps everyone stay well. It’s even more important for people with Alzheimer’s disease.

When the person with Alzheimer’s disease lives with you:

- Buy healthy foods such as vegetables, fruits, and whole-grain products. Be sure to buy foods that the person likes and can eat.
- Give the person choices about what to eat—for example, “Would you like green beans or salad?”
- Buy food that is easy to prepare, such as premade salads and single food portions.

Changes in Intimacy and Sexuality in Alzheimer's Disease

Alzheimer’s disease can cause changes in intimacy and sexuality in both a person with the disease and the caregiver. The person with Alzheimer’s may be stressed by the changes in his or her memory and behaviors. Fear, worry, depression, anger, and low self-esteem (how much the person likes himself or herself) are common. The person may become dependent and cling to you. He or she may not remember your life together and feelings toward one another. The person may even fall in love with someone else.

End-of-Life Care for People With Dementia

People often live for years with dementia. While it can be difficult to think of these diseases as terminal, they do eventually lead to death. Caregivers often experience special challenges surrounding the end of life of someone with dementia in part because the disease progression is so unpredictable. Below are some considerations for end-of-life care for people with dementia.

To learn more, click the red button below.
Tips for People With Dementia

People with dementia experience a range of symptoms related to changes in thinking, remembering, reasoning, and behavior. Living with dementia presents unique challenges, but there are steps you can take to help now and in the future.

Alzheimer's disease and related dementias get worse over time. Even simple everyday activities can become difficult to complete. To help cope with changes in memory and thinking, consider strategies that can make daily tasks easier. Try to adopt them early on so you will have more time to adjust.

To learn more, click the red button below.

Getting Help with Alzheimer's Caregiving

Some caregivers need help when the person is in the early stages of Alzheimer's disease. Other caregivers look for help when the person is in the later stages of Alzheimer's. It's okay to seek help whenever you need it.
As the person moves through the stages of Alzheimer's, he or she will need more care. One reason is that medicines used to treat Alzheimer's disease can only control symptoms; they cannot cure the disease. Symptoms, such as memory loss and confusion, will get worse over time.

Because of this, you will need more help. You may feel that asking for help shows weakness or a lack of caring, but the opposite is true. Asking for help shows your strength. It means you know your limits and when to seek support.

To learn more, click the red button below.

February 22nd Is Heart Valve Disease Awareness Day

Even though as many as 11 million Americans are affected by heart valve disease, public awareness of the disease is shockingly low. The seriousness of the disease, combined with the fact that symptoms are often difficult to detect or dismissed as a normal part of aging, makes this lack of awareness dangerous. While heart valve disease can be disabling and deadly, it can usually be successfully treated in patients of all ages if treated in time, making education and awareness particularly important.

The Heart Valve Disease Awareness Day campaign takes place every February 22nd during American Heart Month. The goal of this initiative is to provide allies and partners with easy-to-understand messages that can easily be incorporated into outreach efforts. It includes social media graphics, videos, magazine inserts and other tools to enable others to spread the word about valve disease.

To learn more about raising awareness of Heart Valve Disease Awareness Day, click the red button below.

Worry Less and Age Better with BenefitsCheckup

BenefitsCheckUp is the nation’s most comprehensive online tool to connect older adults and people with disabilities to benefits. This tool can make it easy to see if you may be eligible—and then help you find out where to apply online or how to get help from a benefits counselor. Answer questions anonymously to find out if you may be eligible for Medicare, food stamps, Social Security, or other government programs.
key benefits programs, including the Supplemental Nutrition Assistance Program (SNAP), Medicare Savings Programs, Medicaid, Medicare Part D Low Income Subsidy (LIS) - Extra Help, among others.

Bathing, Dressing, and Grooming: Alzheimer's Caregiving Tips

At some point, people with Alzheimer’s disease will need help bathing, combing their hair, brushing their teeth, and getting dressed. Because these are private activities, people may not want help. They may feel embarrassed about being naked in front of caregivers. They also may feel angry about not being able to care for themselves.

Click the red button below for suggestions for caregivers who help provide everyday care for individuals with Alzheimer's.

How Family Caregivers Can Help When Personal Hygiene Is a Problem

Pamela Toto’s 102-year-old client had a problem: She was able to live alone, with help from her son, but getting in and out of her shower, where she had a chair and a handheld nozzle, was too difficult.

So, Toto, an occupational therapist, showed the son how to safely help his mother into her shower chair.

But, Toto says, “they didn’t do it.” She learned why in a talk with the son: “He said, ‘I do everything for my mom, but I just don’t want to see her naked.” Toto helped the pair find a solution: a wrap-around towel robe the woman already had that she could wear on the way into and out of the shower.

It was a good illustration, Toto says, of the challenges, both practical and emotional, that caregivers and care recipients face when someone needs help with showering, using the toilet or other intimate hygiene tasks.

To learn more, click the red button below.
How Caregivers Can Counter Family Gaslighting

Intentionally misleading someone to believe something that isn’t true is often called gaslighting, named for the Alfred Hitchcock-directed 1944 movie Gaslight, in which a devious husband uses trickery and deception to manipulate his gullible wife into thinking she’s losing her mind. The term has become part of common parlance in our polarized age of decreased trust in institutions and one another.

People may feel gaslit by friends who are warm and supportive to their faces but bad-mouth them behind their backs; when caught, the gaslighter will say the person is crazy that they thought the comments were about them. An employee may complain of being gaslit by a boss who promises an increased bonus for working longer hours and then reneges, denying having made such a claim. And caregivers may feel gaslit by other family members who deliberately twist the truth about a care receiver’s needs or the caregiver’s responsibilities, to increase that caregiver’s sense of duty and guilt.

Alzheimer's Tied to Cholesterol, Abnormal Nerve Insulation

The protein apolipoprotein E (APOE) plays a key role throughout the body. It helps to transport cholesterol and other fatty molecules, or lipids. The gene that produces APOE comes in a few different varieties. The most common is called APOE3.

The most notorious is APOE4, which has long been linked to an increased risk of dementia in Alzheimer's disease. People who inherit one copy of the APOE4 gene have up to a fourfold greater risk of developing Alzheimer's disease dementia.

Vascular Dementia: Causes, Symptoms, and Treatments

Vascular dementia refers to changes to memory, thinking, and behavior resulting from conditions that affect the blood vessels in the brain. Cognition and brain function can be significantly affected by the size, location, and number of vascular changes.

People with vascular dementia almost always have abnormalities in the brain that can be seen on MRI scans. These abnormalities can include evidence of prior strokes, which are
often small and sometimes without noticeable symptoms. Major strokes can also increase the risk for dementia, but not everyone who has had a stroke will develop dementia.

Transcript: Across the Aisle with Seth Rogen and Laura Miller Rogen

Actor Seth Rogen and filmmaker Lauren Miller Rogen spoke with the Washington Post's Leigh Ann Caldwell on December 8th to discuss for a conversation with the couple about how their personal experiences as caregivers have informed their advocacy and the prospects for bipartisan cooperation on the issue in the new Congress.
New Resources in Search. Find. Help. for Older Adults and Caregivers during Emergencies

The purpose of Search. Find. Help. is to help leaders and staff of organizations serving community-dwelling older adults and their caregivers find resources they can use to support these populations during all types of public health emergencies, including disease outbreaks like COVID-19, natural disasters, and severe weather.

The site includes resources addressing social isolation, managing chronic conditions, elder abuse and neglect, caregiver support, delayed medical care, and emergency preparedness.

Search. Find. Help. has been updated with over 60 new resources to support older adults during other public health emergencies such as natural disasters and severe weather with a focus on disproportionately affected populations, including Tribal populations and people with disabilities.

NORC at the University of Chicago has provided an action plan to help organizations select, adapt, and implement programs to meet the needs of their communities. To view the action plan click the red button below.
The Hurdles Facing Black Families Navigating Serious Illness -- Podcast

Serious illnesses like cancer and kidney failure are painful for patients and hard on their caregivers. Services like hospice and palliative care exist to support families and ensure their loved ones live easier lives and die more comfortable deaths. But data show Black individuals are less likely to have their pain treated and less likely to use hospice and palliative care.

In this Tradeoffs podcast episode from November 10, 2022 — the latest in a series made possible by the Better Care Playbook — a researcher details ways to make this care more equitable and a caregiver shares her family’s journey navigating a serious illness.

Grandfamilies and Kinship Support Network: A National Technical Assistance Center

The Grandfamilies & Kinship Support Network is the first-ever national technical assistance center for those who serve grandfamilies and kinship families. The Network exists, free of charge, to offer a new way for government agencies and nonprofit organizations in states, tribes, and territories to collaborate and work across jurisdictional and systemic boundaries—all to improve supports and services for grandfamilies and kinship families. Our work is rooted in cultural competence and linguistically appropriate approaches and is fully accessible to people with disabilities.

The Grandfamilies & Kinship Support Network will create lasting change for families around the country by connecting and supporting:

- Policy and program leaders at government agencies in states, tribes, and territories within aging/elder/senior services, child welfare, disability, education, housing, nutrition, Medicaid and Medicare, and Temporary Assistance for Needy Families (TANF);
- Kinship navigators; and
- Leaders of nonprofit, community-based, and faith-based organizations focused on supporting grandfamilies and kinship families.

Legal and Financial Planning for People with Dementia

Many people are unprepared to deal with the legal and financial consequences of a serious illness such as Alzheimer's disease or a related dementia. Legal and medical experts encourage people recently diagnosed with a serious illness — particularly one that is expected to cause declining mental and physical health — to examine and update their financial and health care arrangements as soon as possible. Basic legal and financial documents, such as a will, a living trust, and advance directives, are available to ensure that the person's late-stage or end-of-life health care and financial decisions are carried out.

To learn more, click the red button below.
ianacare, the market leader in family caregiver benefits, is now forming the “I Am Not Alone Care Alliance” to create a full infrastructure of support across all sectors. They have galvanized key leaders and influencers from Fortune 500 companies, digital health, public sectors, and HR & benefits communities to lead the conversation and shape the future of caregiving resources. Designed for action and launched during National Family Caregivers Month, the I Am Not Alone Care Alliance will change the way public and private sectors work together to amplify the voice of millions of family caregivers and to fill the gaps - so no caregiver does this alone.

What Is Long-Term Care?

Long-term care involves a variety of services designed to meet a person's health or personal care needs during a short or long period of time. These services help people live as independently and safely as possible when they can no longer perform everyday activities on their own.

Long-term care is provided in different places by different caregivers, depending on a person's needs. Most long-term care is provided at home by unpaid family members and friends. It can also be given in a facility such as a nursing home or in the community, for example, in an adult day care center.

Legacy Lessons from the Sages of Aging

Curated from twelve hours of interviews with 12 of the diverse set of legendary pathfinders in the fields of aging, Legacy Lessons from the Sages of Aging is a 90-minute powerful and inspirational documentary for students and professionals in gerontology, social work, healthcare, medicine, nursing, law, housing, psychology, and other professions who work to meet the needs of older adults.
Planning for the Future After a Dementia Diagnosis

If you or a loved one has been diagnosed with Alzheimer’s disease or a related dementia, it may be difficult to think beyond the day to day. However, taking steps now can help prepare for a smoother tomorrow.

Over time, the symptoms of Alzheimer’s and related dementias will make it difficult to think clearly. Planning as early as possible enables you to make decisions and communicate those decisions to the right people.

How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion. This is best done when there is not an emergency. A calm conversation about what kind of care is wanted and needed now, and what might be needed in the future, can help avoid a lot of confusion.
Decide who will be responsible for which tasks. Many families find the best first step is to name a primary caregiver, even if one is not needed immediately. That way the primary caregiver can step in if there is a crisis.

Agree in advance how each of your efforts can complement one another so that you can be an effective team. Ideally, each of you will be able to take on tasks best suited to your skills or interests.

Look for the Helpers: Providing Support to Older Adults

People age 50 and above commonly provide health, personal, and other types of care and support to other older adults living with chronic conditions or disabilities. This support is often essential for aging in place and managing chronic conditions. In July 2022, the University of Michigan National Poll on Healthy Aging asked a national sample of U.S. adults age 50–80 about their experiences helping an adult age 65 or older with health, personal, and other types of care needs.

To learn more about the poll's findings, click the red button below.

Medicaid Structured Family Caregiving: Enabling Family Members to Make Caregiving Their Primary Focus

Family caregivers play an important role in states' efforts to help Medicaid beneficiaries...
safely remain in their communities. And, as of August 2022, at least seven states (Connecticut, Georgia, Indiana, Louisiana, Missouri, North Carolina, and South Dakota) covered structured family caregiving (SFC) services provided to older adults and/or people with physical disabilities under their Medicaid programs. Coverage of SFC services results in Medicaid payments and other support to family caregivers, usually including spouses and others who are legally responsible for the beneficiary. This brief, which is based on research and interviews with state staff, examines how Georgia, Missouri, and South Dakota are using Medicaid-funded SFC services to help older adults remain in the homes they share with their loved ones.

SFC services consist of a package of services that support home and community-based services (HCBS) waiver participants’ primary caregivers and includes payment, individualized training based on the needs of the waiver participant, coaching, back-up or respite care, and other supports. All interviewees emphasized that they valued SFC services because they enabled HCBS waiver participants who do not self-direct services to receive the personal care they need in their homes from people they know and trust. Georgia and South Dakota offer SFC services to both older adults and people with disabilities enrolled in Medicaid. Missouri, however, offers the services only to Medicaid beneficiaries with Alzheimer’s or a related diagnosis. In all three states, Medicaid beneficiaries must be enrolled in an HCBS waiver to qualify for SFC services. As of July 2022, Missouri was providing SFC services to 62 waiver participants, and South Dakota was providing them to 217 participants. Also, all three states administer their SFC services through agencies, which are entities (usually home health providers) that have agreed to provide the services. Interviewees reported that approach enabled their states to implement the service without new staff resources and helped ensure appropriate oversight of the care delivered to Medicaid beneficiaries.

To learn more about Medicaid structured family caregiving, click the red button below.

Caring for someone with chronic obstructive pulmonary disease (COPD) might be new for you. It is a condition that can be hard to understand and manage. COPD is a group of lung diseases including emphysema and chronic bronchitis, or both — that block airflow in the lungs. This makes breathing difficult for people living with COPD.

Caregivers who feel confident about what to do often provide better care for their loved ones. “The COPD Caregiver’s Toolkit” offers advice on a variety of topics for patients and caregivers, including how to prepare for doctors’ appointments, navigate changes in home life, provide help after a COPD flare-up or hospital stay and stay mentally and physically
Acceptance & Letting Go

We cannot control everything; we can only control our responses. On our caregiver journey, we often want to assert control over situations in order to show love or support. Sometimes the best way to provide care to our loved ones is to practice radical acceptance and letting things go.

Letting go is hard for everyone at first. Courage to Caregivers has put together some tips and philosophies on acceptance.

Alzheimer’s disease, which can destroy the ability to think, learn, and remember, is more common in women than men. The reasons for this disparity between the sexes are not well understood.

Women are known to have greater levels of tau protein abnormally build up in brain cells over their lives. The structures that form, called tau tangles, are one of the hallmarks of Alzheimer’s disease.

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough.

At first, many older adults pay for care in part with their own money. Initially, family and friends may provide personal care and other services, such as transportation, for free. But as a person’s needs increase, paid services may be needed.

Older adults may be eligible for some government health care benefits. Caregivers can help by learning more about possible sources of financial help and assisting older adults in applying for aid as appropriate.

Caring for a Person Who Has Intellectual Developmental Disabilities

An intellectual or developmental disability affects a person’s ability to live, attend school, and work independently. A person may need support with cooking, banking, transportation, social situations, health care visits, and jobs. Three of the best-known intellectual or developmental disabilities are Down syndrome, autism, and traumatic brain injury (TBI). Many families care for a person who has an intellectual or developmental disability. It could be a young child, an adult child who lives at home with their parents, or even an adult sibling.

**Fall Prevention Partner Toolkit**

There’s so much about life to enjoy as we age. We need to stay healthy and take steps to prevent falls so we can enjoy our family, friends, and the things we love. Falls are the number one cause of injury in adults aged 65 and older and can lead to serious health problems. Many of these falls are preventable. You can take control by assessing your fall risk.

Take the Falls Free CheckUp by clicking on the red button below, and discuss the results with your doctor.

**Age-Friendly Insights Poll: Broad Political Support for Policies to Help Family Caregivers**

In a recent poll, the John A. Hartford Foundation recently asked adults living in the U.S. for their opinions on policies to help family caregivers, including those recommended in the 2022 National Strategy to Support Family Caregivers. Agreement is near-universal: Action is needed to support family caregivers.

Taking Care of Yourself: Tips for Caregivers

Being a caregiver can be extremely rewarding, but it can also be overwhelming. It’s not uncommon to feel lonely or frustrated with everyone around you, from the care recipient to the doctors. That’s why taking care of yourself is one of the most important things you can do as a caregiver. Here are a few things you can do to care for yourself:

- Stay physically active. Try doing yoga or going for a walk.
- Eat healthy foods. Nutritious food can help keep you healthy and give you energy.
- Join a caregiver support group online or in person. Meeting other caregivers will give you a chance to share stories and ideas.

Doctor's Appointments: Tips for Caregivers

Working with doctors and other healthcare professionals can be an important part of being a caregiver. Some things caregivers may find especially helpful to discuss are: what to expect in the future, sources of information and support, community services, and ways they can maintain their own well-being.

Giving Care: An Approach to a Better Caregiving Landscape in Canada

Unpaid caregivers and paid care providers make up the largest part of Canada’s health-care and social supports systems. Research shows that they provide approximately three hours of care for every hour provided through the rest of our systems. They help seniors living in the community or in long-term care settings; children and adults with physical, intellectual, or developmental disabilities; people with medical conditions; people experiencing mental illness; and people with changing support needs related to aging.

On November 7, 2022, the Canadian Centre for Caregiving Excellence released its first policy white paper – Giving Care: An approach to a better caregiving landscape in Canada. The report aims to ignite a public conversation on the state of caregiving and offer potential policy solutions to address the many challenges and systemic issues experienced by Canada’s 8+ million caregivers and care providers across the country.
