The Silent Epidemic Affecting Generation Z

Marcus McKinley was a junior at Ohio University when his mother, Kim, then fifty-five, collapsed at work. He figured it was dehydration, but when he got to the hospital, he found out it was more serious than that; she’d had a stroke and needed brain surgery. Her right side was paralyzed, so she couldn’t walk, and when she first got out of the ICU, Marcus couldn’t understand a word she said.

How Caregiving Can Liberate Caregivers from Past Trauma

Imagine two 56-year-old women who are the caregivers for their mothers with moderate dementia. After moving into their mothers’ homes, they do essentially the same caregiving tasks, including managing medications, making appointments and running the household. They have been caregivers for the same number of years and have the same amount of support from siblings and other family members. But while one is stressed and sad, grieving her mother’s slow decline and wondering when it will all be over, the other is overwhelmed, consumed with anger and guilt, and finding each day practically unbearable.

Social Isolation Linked to Greater Risk of Dementia in the Elderly, Study Finds

Social isolation among older adults has been linked to a greater risk of developing dementia, according to a new study.

Researchers from Johns Hopkins University examined data on 5,022 older adults with a mean age of 76 in the United States, 1,172 of whom were socially isolated.

Most of the older adults in the study were non-Hispanic white women with more than a college education.

As a result, researchers found that socially isolated older adults had an almost 28 percent greater chance of developing dementia over nine years compared to their socialized peers.

Opening for an Associate Director of Policy & Advocacy Position with NAC

The National Alliance for Caregiving (NAC) has posted a job opening for an Associate Director of Policy & Advocacy position. The Associate Director will support NAC’s Advocacy Department with the aim to further NAC’s vision of a society that values, supports, and empowers family caregivers—drawing on NAC’s mission to build partnerships in research, advocacy, and innovation to make life better for family caregivers.

Interested applicants can email Mike Wittke, Vice President for Policy & Advocacy, at mike@caregiving.org or click the red button below.

NAC NEWS AND UPDATES

Caregiving is an emotional experience.

CALL: 1.888.665.2190
to tell us about the challenges and joys you experience as a family caregiver.

The National Alliance for Caregiving Opens Phone Line for Family Caregivers to Talk About Their Mental Well-Being
Sponsored by Travere Therapeutics, the National Alliance for Caregiving is spearheading a project to advance the mental well-being of family caregivers in the United States. NAC wants to hear from family caregivers on the joys, challenges and struggles they've faced on their caregiving journey in order to better understand their needs and the supports and interventions that can be introduced to assist them.

If you’re a family caregiver or have cared for someone in the past, call 1-888-665-2190 to share your caregiving story and the feelings associated with it.

If you would prefer to write out your response rather than leave an audio message, you may do so here.

We want to know:

• What joys have you experienced as a caregiver?
• How are you feeling about being a caregiver?
• What are challenges you have faced as a caregiver?
• What are concerns you have about providing care?

The message you leave will inform policy and practice efforts to improve support for family caregivers like you! All messages left will be anonymous, with only the transcript being used to help us advocate for change.

It’s important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. Assessing the Pain of Care Recipients: Tools Available to Family Caregivers utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America’s 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it’s needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC’s report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

**World Carers Conversation 2022 Session Recordings**

World Carers Conversation returned May 19, 2022 as a global, virtual event with the support of EMD Serono and Embracing Carers. Innovators, researchers, policymakers
and carer advocates from around the globe learned about advancements in the field, got inspired, and made connections that matter for the future of carers everywhere. These recordings cover the primary conversations and topics discussed.

To view the slide deck used in the event, click [here](#). To view the recordings, click below.

**Global Voices of Caregiving: A PhotoVoice Project**

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn’t work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver’s own experience and tells a diverse story of what it’s like to care for others, an act which connects us all.

To view and hear these stories, please click on the red button below.

**JANUARY**

**HCCIntelligence Webinar: 2023 Here We Come! Billing & Coding Impacts You Need to Know**

January 18, 2023 | 4:00 PM - 5:00 PM ET | Online

Objectives of the webinar:

- Review the coding, reimbursement, and policy impacts as a result of the CY 2023 Medicare Physician Fee Schedule Final Rule (MPFS) and how to best respond to these changes.
- Identify and apply correct CPT codes for care management services.
- Discuss documentation requirements to ensure coding compliance.
Transforming Hardship into Healing

January 18, 2023 | 6:00 PM - 7:00 PM ET | Online

Health challenges can be daunting. The disorienting and confusing nature of a health issue tends to put a strain on relationships; conflicts, changing roles, shifting expectations, sensitive and uncomfortable topics can all add to the messy mix. Whether in a caring dynamic at home, in a clinical or organizational setting, we may find ourselves having difficult conversations. Many relationships, familial and professional alike, snap under the pressure of disagreement.

Tune in on January 18th for a workshop led by Joe Weston that will guide participants through the murky waters of how to have difficult conversations - how does one bend rather than break in tense confrontations? Whether you’re dealing with, or caring for someone with a health challenge, working in a caring profession and trying to understand how to better relate to peers, or even working towards a shift in your organizational culture, Joe will offer tried and true insights about how to transform hardship into healing relationships.

Joe Weston is an author, educator, and guide. With a career spanning 30+ years in the fields of conflict prevention, leadership, stress management, and communication, he is a highly sought-after facilitator for individuals, as well as corporations, government agencies, and nonprofits around the world.

The Changing Brain: Exploring Personality & Behavior Change with Dementia

January 19, 2023 | 12:00 PM - 1:00 PM ET | Online

Changes in personality and behavior are common symptoms for people living with dementia. Join our informative webinar as we explore the changes caused by dementia, ways to understand behavior changes, and the impact on caregivers. We will share local programs and services available in your community, including a unique educational program called UFirst! for Care Partners® that provides training for family and friends who are directly supporting someone with behavior changes as a result of dementia or other cognitive impairment.

To register for this event, click the red button below.
Long-Distance Caregiving
January 19, 2023 | 2:00 PM - 3:15 PM ET | Online

Caring for someone living with dementia from afar presents its own unique challenges. Join us to hear from the experts at Alzheimer's San Diego and learn ways to stay in touch, how to stay informed, and how to be a helpful support and partner, even at a distance.

To register for this event, click the red button below.

CONFIDENCE Financial Education Program
Thursdays, January 19 - February 16, 2023, 5:00 PM – 7:00 PM ET | Online

Join the University of Southern California Family Caregiver Support Program for a virtual program designed to help Latino and Hispanic family caregivers to persons living with Alzheimer's disease or a related dementia lower the out-of-pocket costs of caregiving. Over 5 weeks, caregivers will meet virtually and gather in group sessions led by a trained facilitator to discuss: how to navigate community resources, strategies for seeking help, how to balance employment and caregiving, and more!

Sessions will take place over Zoom video conference.

To register for this event, click the red button below.

Understanding Aggression Toward Family/Caregivers in Childhood Adolescence
January 19, 2023 | 7:00 PM - 8:30 PM ET | Online

AFCCA refers to Aggression towards Family/Caregivers in Childhood & Adolescence. AFCCA can be a difficult subject to talk about, and parents/caregivers often share they feel shame, stigma, and isolation when they do seek help. Everyone involved—including the youth themselves—is at risk of physical and/or psychological harm, as well as family instability and possible breakdown.
We know that families need understanding, and we offer a welcoming, accepting community who are walking similar paths. Please join us for an evening with Adopt4Life’s AFCCA Family Supports Program Team as we explore the complexities of AFCCA including common challenges and promising interventions to improve safety and strengthen families including non-violent resistance (NVR), de-escalation techniques, and building circles of support.

To learn more about Adopt4Life's AFCCA Family Support Program, visit [https://www.adopt4life.com/afcca](https://www.adopt4life.com/afcca)

Essentials of Caregiving: Advance Directives

January 25, 2023 | 11:30 AM - 1:00 PM ET | Online

This presentation will provide a broad overview of the steps you can take to prepare for
your future care and the care of your family member(s) living with dementia. We will cover Medical Power of Attorney (MPOA), living wills, and out-of-hospital DNRs.

Communicating your wishes to your family and providers is critical in ensuring you are provided care that aligns with your values and preferences. We can never anticipate what might happen and the possibility that we may be unable to communicate our wishes one day. Hosted by the Caring for the Caregiver program at the School of Nursing at UT Health San Antonio, this presentation will help you proactively prepare for your future and communicate what matters to you in terms of care.

Our presenter, Alaina Kuhn, RN, BSN, is completing her Doctorate of Nursing Practice at UT Health San Antonio. She has experience working across settings including critical care and has seen firsthand the importance of having advance directives in place. She will be joined by Stett Jacoby from the Law Offices of Carol Bertsch, who will be available to support discussion and answer questions.

**Carers' Rights and Benefits**

January 27, 2023 | 8:30 AM - 10:00 AM ET | Online

Caring for a family member or friend with dementia can be financially challenging. There is a range of financial support available, but getting to grips with the system can be tricky.

This session explores the range of carers’ rights and benefits and the types of assessments and support available.

The various benefits will be described, and there will be an opportunity to reflect and apply this to your own situation.

This session is for you if you would like to …
- Gain a better understanding of the rights and benefits available to you and the person you care for
- Spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

**Next BIG THING**
What's Next for Me After Caregiving Ends?

January 28, 2023 | 1:00 PM - 2:00 PM ET | Online

When a personal caregiving experience ends, you may wonder: What's next for me?

Because of your personal caregiving experience, you'll look at your life's work with a fresh perspective. During this interactive workshop, Denise M. Brown, founder of the The Caregiving Years Training Academy, will help you see possibilities for your career or your volunteer work. She'll also share how other family caregivers transform their personal caregiving experience through her training programs.

We'll record this meeting so be sure to register even if you can't attend the live event. We'll send the archive to you after the event ends.

To register for this event, click the red button below.

Meaningful Activity

January 30, 2023 | 8:30 AM - 10:00 AM ET | Online

Why is meaningful activity important for people with dementia?

Meaningful activity is important to help us all maintain a good quality of life, whether we are living with dementia or not. It is particularly important for people with dementia as it:

- Helps maintain skills and independence
- Helps maintain brain (cognitive) function
- Builds and preserves self-esteem and self-confidence
- Gives an outlet for self-expression
- Provides social and emotional connection

The type of meaningful activity a person with dementia will be able to engage in will depend on their interests, strengths and abilities. Meaningful activity can vary from daily tasks such as cooking and cleaning, to art classes, watching films, exercise and spending time with family and friends.

Why join this session?

It is an opportunity to consider activities and why they are important to someone with dementia. The session explores different sorts of activities might meet the different needs of an individual. There will be some practical advice and strategies about how to engage someone in activities.

The course is for you if you would like to …

- Know more about why activities are important
- Consider the different needs an individual has and how activities might meet these
- Learn some hints and tips about how to get someone involved in activities
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.
Taking Care of Yourself

February 1, 2023 | 8:30 AM - 10:00 AM ET | Online

If you care for someone with dementia, this is your chance to consider your own wellbeing and develop some tools and skills to help you.

“Resilience is the way we cope with stress and adversity in life. By learning new ways of thinking, behaving and interacting with others, we develop ways to cope even when life is tough.”

Put another way, resilience is building the ability to make choices when we are under pressure.

Our instincts are designed to protect us and can take over and make decisions for us, but this isn't always helpful. Resilience gives us the awareness to notice this and the ability to choose how to act rather than a knee jerk reaction.

This session is for your if you would like to:

- Learn about how resilience can be built to support your well being
- Gain ideas and strategies to support your own wellbeing
- Spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

Relationships and Feeling Secure

February 2, 2023 | 8:30 AM - 10:00 AM ET | Online

This session aims to explore the types of relationships and bonds we have with important people in our lives, including the person with dementia that you care for. There will be an opportunity to discuss how attachment affects a person with dementia and what can help them feel more secure in relationships.

This session is for you if:

- you would like to gain a better understanding of the influences the ability of a person with dementia to feel secure
- you would like to learn about the different strategies which can contribute to a person feeling secure
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.
Emotional Care Through the Grief Cycle: What to Expect

February 3, 2023 | 2:00 PM - 3:00 PM ET | Online

Free Parent Webinar for Parents/Caregivers of Children with Disabilities

Learn how resilience and growth can be fostered while navigating the many challenges and stress related to raising and supporting your child with a disability.

Dr. Henrietta Pazos is a clinical and school psychologist who has over 20 years of experience working with neurodiverse children and their parents and families as an evaluator and therapist. She has worked in the school system for many years in Denver and currently has a private practice testing for Autism, ADHD, Dyslexia, and other Developmental Disabilities.

Dr. Henrietta Pazos will talk about:

• Parent/Caregiver Grief Cycle after Diagnosis
• How to identify related stressors
• How to manage stress to foster strength and resilience through the stages

What else would you like to know about? We will allow time for Q&A at the end.

To register for this event, click the red button below.

Advance Directives: What Families Should Know

February 7, 2023 | 1:00 PM - 2:00 PM ET | Online

Making medical decisions can be difficult when facing any illness. That is why an advance directive is so important to have. In this workshop we will discuss what advance directives are, who needs to have them and more.

This workshop is part of a series designed to provide education, support, and resources for those caring for loved ones with an illness. There will be time for Q&A following each presentation. Please note, all times are Eastern Time (U.S.).
Engaging Caregivers: A Program for Healthcare Workers

Thursdays, February 9 - February 23, 2023, 11:00 AM – 12:00 PM ET | Online

The Caregiver Teleconnection program has one-hour conference calls, at no cost. These sessions cover a wide range of interesting topics related to the care you provide to your loved one. You can get expert advice, ask questions and talk to other people who are also providing care.

Beginning on February 9th, join in for a three-session Caregiver Teleconnection program that will focus on defining roles and responsibilities with patients and caregivers, the role of diversity and culture, and where to find resources to help with difficult situations and elder abuse. Healthcare workers can better serve patients through partnership with caregivers, but there is limited formal training and support on how to engage caregivers which is the focus of this series. Certificate of attendance provided upon request. Certificate of attendance provided upon request.

To participate in these sessions, you can either log in using a laptop, tablet or phone. If you prefer to call in, a phone number will be provided within the Zoom registration confirmation email. If you have any questions or need further assistance, please call 1-866-390-6401 or email caregiverteleconnection@wellmed.org.

To learn more about this event, click the red button below.
Family caregivers play an invaluable part in supporting people living with heart failure. However, this role can be stressful and overwhelming, and it may be difficult for caregivers to balance their needs with their care recipient.

In recognition of Heart Month, join the Ontario Caregiver Organization on February 9th for a presentation given by two heart failure caregivers, Cindy Yip and John Yudelman, who who will share their challenges, experiences, and helpful supports they found on their caregiver journeys. You will also hear from Dr. Phyllis Billia, cardiologist at UHN’s Peter Munk Cardiac Centre. Dr. Billia specializes in heart failure, focused on patients undergoing advanced therapies. She will provide practical resources and explain care strategies and support for caregivers.

To register for this event, click the red button below.

Many Faces of Anxiety

February 15, 2023, 6:30 PM – 8:30 PM ET | Online

Join Victoria Medeiros and Ambreen Agha (Child and Family Therapists) on February 15, 2023 for a workshop whose goal is to provide valuable information to support caregivers of children and adolescents who experience anxiety. Topics include: Understanding different types of anxiety, causes, how the mind and brain are connected, coping strategies for caregivers; and what caregivers can do to help.

To register for this event, click the red button below.
Coping with Stress as a Caregiver

Wednesdays, February 15 - March 8, 2023, 3:00 PM – 4:00 PM ET | Online

It’s common for caregivers to sacrifice their own well-being while caring for others – and we’re here to help you prioritize yourself. While caregivers are often compassionate and giving individuals, we too need time for cultivating our own wellness. You’ve likely heard the saying before that “you cannot pour from an empty cup.” Taking care of ourselves and properly managing stress can help improve our lives – both in and out of our caregiving roles.

Join us for a 4-part workshop series for caregivers – focused on strategies for self-care and connecting with others to find support.

Learn how to use the stress-mapping model to cope with stress, restore your well-being, and safeguard your passion for this work.

Sessions are held virtually on Wednesdays from 3:00 to 4:00 pm ET on the following dates:

February 15th & 22nd, March 1st & 8th

Topics Include:

*Balancing care for self with care for others
*Mapping early warning signs of stress
*Supporting one another with the implementation of self-care strategies

Yvette Garcia, M.A. has over 10 years of experience in supporting individuals to stay in touch with their personal “why” and bringing out the best in themselves while navigating the stressors of work and everyday life.

To register for this series, click the red button below.
Caregiver Learning Workshop: Estate and Elder Law Planning

February 16, 2023 | 1:00 PM - 2:00 PM ET | Online

Join Rebecca L. Wilson (Attorney, Myers Billion LLP Law Firm) on February 16th that will cover estate planning and elder law tools that can help you get your ducks in a row. She will focus on tools that enable caregivers to handle issues that arise, from paying bills to making medical decisions. We will discuss ways to create a plan that ensures an individual’s wishes are carried out, both during any incapacity and on death. We will also cover the consequences of failing to put together a plan ahead of time and the options that remain when emergencies arise.

For more information, contact Leacey Brown, SDSU Extension Gerontology Field Specialist, at 605-394-1722 or leacey.brown@sdstate.edu.

Why Dementia is Different for Everybody

February 22, 2023 | 8:30 AM - 10:00 AM ET | Online

Dementia affects each person in a different way, depending on multiple factors. These factors can include neurology, physical health, personality, our biography and background and the social environment in which we live. The signs and symptoms of dementia can therefore be quite different depending on the individual.

Did you know that there are more than 100 types of dementia? Understanding the different types of dementia, how they are diagnosed and their effects on different people is important in providing the best care for the person with dementia.

Presented by Dementia Carers Count in the UK, this introductory course on February 22nd, looks at the different factors that affect a person’s experience of dementia and how these might influence the role of the carer.

Why join this session?

Whether the person you care for has a formal diagnosis or not, this session is for you. By better understanding dementia, you will be better equipped to deal with the challenges you both might have to face.
The course is for you if you would like to …

- Gain a better understanding of your friend or family member
- Learn about the different factors which can contribute to a person's experience of having dementia
- Understand why no two people with dementia have the same experience
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment.
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

**Information for Caregivers of People on Kidney & Liver Transplant Waitlist**

February 22, 2023 | 12:00 PM - 1:00 PM ET | Online

If you are caring for someone who was recently diagnosed with end stage kidney or liver failure or is currently on the kidney or liver transplant waitlist this interactive webinar session may help.

We will provide an overview of the referral process, pathways to transplant, resources for caregivers and an opportunity for questions and answers.

Pre-registration is required. A follow-up email containing webinar login/call-in details will be sent to all registrants.

If you have questions or would like more information about these sessions, please email livingorgandonation@uhn.ca.

To register for this event, click the red button below.

**Understanding Schizoaffective Disorder**

February 28, 2023 | 1:00 PM - 2:00 PM ET | Online

Schizoaffective disorder is a complicated illness that is often confused with other mental health disorders. Join the Mindspring Mental Health Alliance on February 28th for an exploration of the diagnostic criteria, signs, and symptoms that differentiate schizoaffective disorder from other illnesses. This one-hour seminar includes information on causation, risk factors, treatment options, and ways to cope if you or a loved one have been diagnosed.

To register for this event, click the red button below.
The Brain and Dementia

March 6, 2023 | 8:30 AM - 10:00 AM ET | Online

Understanding how dementia affects different parts of the brain is useful, particularly if you are looking after someone with dementia.

The brain is the most complex organ in the body and produces every thought, memory and action, experience and feeling we have. The more we can understand the brain, the more sense emotions and behavior will make.

You may already know that dementia is not just the brain getting older. It is caused by damage to the brain that can produce unpredictable results and symptoms.

But, did you know that there are more than 100 types of dementia? The condition affects memory, emotions, communication, behavior, vision and motor skills – and it worsens over time.

Tune in on March 6th for a presentation hosted by Dementia Carers Count that will help you learn about the different types of dementia and how they can affect the brain.

To register for this event, click the red button below.

Keeping the Communication Going

March 8, 2023 | 8:30 AM - 10:00 AM ET | Online

Join Dementia Carers Count on March 8th for a discussion about how dementia can affect language and communication. There will be an opportunity to explore the emotional impact of a breakdown in communication / relationships for a carer and the person with dementia and to identify strategies to help establish effective and meaningful interactions.

This session is for you if:

- you would like to gain a better understanding of how communication can be affected for a person with dementia
- you would like to learn about different strategies to support a person's ability to communicate and understand
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

Comfort for Caregivers: Strategies for Dealing with Caregiver Stress

March 14, 2023 | 1:00 PM - 2:00 PM ET | Online

Caring for a loved one strains even the most resilient people. In this workshop, we will discuss strategies for dealing with caregiver stress and learn effective ways to preserve your own health and well-being.

This workshop is part of a series presented by HopeHealth Hospice & Palliative Care designed to provide education, support, and resources for those caring for loved ones with an illness. There will be time for Q&A following each presentation.

To register for this event, click the red button below.

Preparing for an Outing with the Person You Care For

March 20, 2023 | 8:30 AM - 10:00 AM ET | Online

This session hosted by Dementia Carers Count will take a look at some of the challenges of going out in the community, both for the person with dementia and those who are caring for them.

We will explore the importance of going out for both the person living with dementia and their carer.

The session will look at ways of preparing and supporting someone to go out as well as thinking about resources and support that may help.

The session is for you if you would like to…

- gain some ideas for supporting the person and reduce your own fear or embarrassment of potential situations
- spend time with experienced health and care professionals who will answer your questions in a safe, supportive environment
- You would like to meet other people who are taking care of a friend or family
Driving and Dementia Roadmap

March 27, 2023 | 2:30 PM - 4:00 PM ET | Online

Making the decision to stop driving and the transition to non-driving is challenging and complex, especially for drivers living with dementia and their care partners. In this webinar, Drs. Gary Naglie and Mark Rapoport, who lead a team of researchers focused on dementia and driving, will describe the development and evaluation of the Driving and Dementia Roadmap (DDR - www.drivinganddementia.ca) - a recently launched online educational resource. They will also demonstrate how to use the DDR, whether you are a person living with dementia, a care partner/friend or a healthcare/service provider supporting others through this process.

**This event will not provide information or training on how to assess an individual’s driving ability**

To register for this event, click the red button below.

Understanding and Responding to Dementia-Related Behaviors

April 11, 2023 | 4:00 PM - 5:00 PM ET | Online

Behavior is a powerful form of communication and is one of the primary ways for people with dementia to communicate their needs and feelings as the ability to use language is lost. However, some behaviors can present real challenges for caregivers to manage. Join us to learn to decode behavioral messages, identify common behavior triggers, and learn strategies to help intervene with some of the most common behavioral challenges of Alzheimer's disease.

To register for this event, click the red button below.

Health and Aging Policy Fellowship 2023-2024
Call for Applications

Deadline to apply: April 17, 2023

With an aging population, one of the greatest challenges for the U.S. is ensuring that policies provide the best possible quality of life for all across all dimensions of society – from the communities where we live, the transportation we depend on, the food we eat, and the health care we receive. Success will require the translation of cutting-edge science and practical clinical experience into sound health policy. The goal of the Health and Aging Policy Fellows Program is to provide professionals in health and aging with the experience and skills necessary to help lead this effort, and in so doing, shape a healthy and productive future for older Americans.

The Health and Aging Policy Fellows Program offers two different tracks for individual placement: (1) a residential track that includes a nine-to-12-month placement in Washington, D.C. or at a state agency (as a legislative assistant in Congress, a professional staff member in an executive branch agency or in a policy organization); (2) a non-residential track that includes a health policy project and brief placement(s) throughout the year at relevant sites. The project may be focused at a global, federal, state or community level.

In addition, through our partnership with the veterans health administration, VA employees can participate in the VA track as a non-residential fellow.

Core program components focused on career development and professional enrichment are provided for fellows in all tracks.

To learn more about the fellowship, click here. To apply, click the red button below.
Research Study for People with a Recent Alzheimer's Diagnosis and their Caregivers

Researchers from Medical University of South Carolina (MUSC) College of Nursing are seeking caregivers and their loved-ones with a recent Alzheimer's diagnosis (within 12 months) to volunteer for a research study. The purpose of this study is to help test an educational program (SUPPORT-D) for families. The program will focus on managing daily stress, improving quality of life, home safety, and advanced care planning.

If you and your loved-one would like to join this study, you will be sent program materials, asked to review them, and take part in two study visits over six weeks. These visits with a nurse will last 45-60 minutes and are conducted virtually (via Microsoft Teams or telephone). Researchers will ask you to complete several surveys related to knowledge of Alzheimer's disease, acceptability and feasibility of the intervention, stress, caregiver burden, symptom burden, quality of life, disease preparedness, safety, technology literacy, and advanced care planning. Study compensation is provided for your time.

To learn more or participate in this study, call Mary Chris Pittman at (843)792-3512 or email her by clicking on the red button below.

The Informal Caregiving Experience

Hello! You are invited to participate in an online survey about your experiences as an informal caregiver. Informal caregivers can be defined as an individual that is currently taking care of a someone else (i.e., spouse, parent, sibling, friend) that has been diagnosed with a chronic illness or disability (e.g., Alzheimer's, dementia, Parkinson's, cancer, physical disabilities). An informal caregiver is not a paid health aid for the care receiver.

We are interested in how prepared you felt when starting the caregiving role and how much becoming a caregiver has influenced your identity.

You are eligible if you:

- Are not caring for a minor
- Currently help care for one of your loved ones who lives with a chronic illness (by care, this includes but is not limited to: Eating, grooming, managing finances, administering medications, transportation, shopping, etc.)
- Caring for your loved one at least part time (approx. 20 hours a week) to full time

If you are interested in participating in this study, click the red button below.

The Impact of Illness Perceptions on Veteran Caregivers

Are you a caregiver of a military Veterans with chronic pain, fatigue, or other symptoms?

Researchers at the University at Albany, SUNY are seeking volunteers for a research study to understand the experiences of caregivers for veterans with chronic symptoms. We are conducting a short (20 minute) survey to understand how you think about the illness you are caring for. The goal of this study is to understand what factors should be considered when supporting veteran caregivers.

You are eligible to participate if you are:

1. Over the age of 18
2. Currently caring for a military veteran with chronic symptoms

If you have questions about this project, you may contact the principal investigator, Darren Winograd, M.A. at dwinograd@albany.edu.

If you wish to participate, click the red button below.

LEARN MORE >

Are You Supporting a Loved One with Memory Challenges?

Are you interested in participating in our caregiver focus groups?

This work is sponsored by the National Institutes on Aging and aims to gather feedback from Black family caregivers about their experiences in caring for a loved one with dementia either currently or within the past 5 years. The following questions will help to determine your eligibility to participate in the study and will only take a few minutes to complete.

If you are eligible to participate in the study, a team member will reach out to you by email or phone to set up a video visit to confirm your eligibility. You must have access to a computer, tablet, or smartphone with working video in order to participate in the video visit. At the video visit you will confirm your identity with a valid form of identification (state id or driver's license, passport etc), and complete a brief cognitive assessment.

Focus groups will take place via zoom and will last approximately 1 hour. Focus group dates and times will be determined based upon group availability. All focus groups will be comprised of 5-8 other current or former caregivers. Prior to the focus group meeting you complete an electronic consent form and brief demographic questionnaire. Following focus group participation, participants will be mailed a $50 Mastercard gift card.

To participate in this study, click on the red button below.

LEARN MORE >
The Mindful and Self-Compassionate Care Program (MASC): Reducing Stress for Caregivers of Persons with Dementia

We would like to invite you to share your thoughts and experiences in a virtual 60-minute focus group via Zoom.

Who are we?
We are researchers from the Center for Aging and Serious Illness and the Center for Health Outcomes and Interdisciplinary Research at Massachusetts General Hospital who are interested in learning about how a 6-week virtual program like the Mindful, Self-Compassionate Care Program (MASC) can be used to support the well-being of caregivers for persons with Alzheimer’s disease and related dementias. This research study is sponsored by the National Institutes of Health.

What is this study about?
We are interested in developing a program to support the wellbeing of caregivers of those living with dementia. We are particularly interested in hearing from caregivers experiencing stress and/or challenges due to their loved one’s dementia related behaviors

Who can participate?
- 18 years or older
- English fluency and literacy
- Must live with and care for an individual living with dementia

Why participate?
- You will contribute to the development of a dementia caregiver support program that may benefit caregivers in the future.
- Participants will receive up to $50 for their time.

To learn more about this study, contact Aniyah Travis at (617)726-9623 or by clicking on the red button below.

Are You a Caregiver for a Person With Dementia Who is Receiving Home Care?

If you are a caregiver living approximately 2 or more hours away from your care recipient, you may be eligible to participate in a new research study evaluating the administration of a non-drug intervention designed to help long-distance caregivers of persons with dementia.

You may be eligible to participate if you:
- Are a caregiver age 21 or older
- Are living about 2 hours or more away from your care recipient
- Have a care recipient with dementia AND who is receiving home care
If eligible, you will receive:
- Individualized support from dementia experts, delivered remotely via the use of a tablet
- Tailored dementia education and resources
- A new tablet for the study, which is yours to keep

To learn more about this study, contact the Project Director, Evan Chunga, by clicking on the red button below.

---

**Communication in the Family**

You are invited to be interviewed about your experiences and communication patterns as someone who currently (or in the past) cares for your family member living with Alzheimer’s disease or another related dementia (ADRD). There are potentially things you are uncertain about regarding caring for your family member, and we are interested in how you communicate to manage these uncertainties. Uncertainty means the inability to predict what will happen or the unknown. For example, you might worry about your loved one’s well-being because their dementia makes their behavior unpredictable.

You are eligible if you:

- Are at least 18 years old
- Used to or currently help care for one of your family members who lives/d with ADRD (by care, this includes but is not limited to: Eating, bathing, transferring, managing finances, medications, chores, shopping, etc.)

To learn more about this study, click on the red button below.

**Alzheimer's Disease Research Study**

Are you currently caring for a loved one with Dementia?

The Ohio State University is looking for people with dementia and their caregivers to be part of a research study to better understand how people with dementia experience pain.

This study can be completed over the phone with the option of 1 in-person session. Our team is looking forward to talking with you!

To learn more or participate in this study, click on the red button below.
Co-Designing a Stress Management Toolkit for Families Living With Dementia

Researchers at Duke University would like to learn more about stress experienced by people living with dementia and their care partners, as well as about how families manage stress at home.

The goal of the project is to develop a toolkit of different things that people with dementia and their care partners can use on a daily basis to manage stress at home.

Focus groups will be held with dyads of people with dementia and their care partners together, and with care partners only. Groups will be held remotely using Zoom and are anticipated to last about 60-90 minutes. Participants will be compensated for their time.

To learn more or participate in this study, click on the red button below.

IN CASE YOU MISSED IT...

What’s Your Caregiving Impact?

According to recent research from Age of Majority:

--Eight in 10 (80%) family caregivers are interested in paying for products or services to help them manage
Almost nine in 10 (87.9%) cannot identify any companies that stand out in helping them as caregivers.

Family caregivers need local resources who can guide them, support them and encourage them.

They need someone like you.

When a personal caregiving experience ends, you may wonder: How can I make a difference to make the experience easier for family caregivers?

This session help you find clarity on the difference you want to make. Denise also will share an overview of the training programs she developed which could help.

---

**Epilepsy Resources for Caregivers**

Whether you've been a caregiver for years or if your duties as a caregiver are just beginning, it's comforting to know that there are epilepsy resources to help you navigate your loved ones' journey.

Many resources exist to connect you with others who are experiencing something similar. There are also support services that can help when you may be feeling a little lost. No matter your situation, there are people and places you can turn to when you need a helping hand.

To learn more, click the red button below.

[LEARN MORE](#)
Being a caregiver means helping with the daily needs of another person. An informal caregiver is usually a relative or friend who may or may not live in the same house as the person they are caring for. A formal caregiver, such as a nurse, is paid and has training to care for a patient. Informal and formal caregivers help people with cancer during and after treatment in many ways.

The NIH's National Cancer Institute has put together a fact sheet about the roles, needs, and burdens of informal caregivers who are caring for a person with cancer. To view the fact sheet, click the red button below.

What Parents and Caregivers Need to Know About the New Pediatric Obesity Guidance

For the first time in 15 years, the American Academy of Pediatrics (AAP) has updated its guidance on obesity in children, recommending a more proactive approach.

According to the Centers for Disease Control and Prevention, nearly 20% of children and adolescents in the United States are obese—meaning that their body mass index (BMI) is at or above the 95th percentile of the CDC growth chart. For children, BMI is an age- and sex-specific measurement using height and weight that helps assess body fat. Children who are obese are at higher risk for physical health issues, including heart disease and type 2 diabetes, as well as mental health issues, such as anxiety and depression.

To learn more, click the red button below.

Understanding Chronic Sorrow

There is sneaky grief and loss that caregivers of children with mental illness experience. Chronic sorrow, as it has been called, is "ambiguous, one that rarely subsides over time, and is rarely acknowledged." As a caregiver of children who have struggled with mental illness, I have learned to celebrate the joy and stay in deep gratitude for healthy times, yet there is a constant dull ache that persists, and chronic sorrow gives this a name for me. In my professional role, I have listened as chronic sorrow creates an additional barrier for caregivers, complicating the stress and anxiety of caring for their children.

To learn more, click the red button below.
Blood Test for Early Alzheimer's Detection

One of the first stages of Alzheimer's disease involves formation of toxic aggregates, called oligomers, of the protein amyloid beta (Aβ). These oligomers can start to form more than a decade before symptoms appear and before other known disease markers form. The ability to detect these oligomers would permit early disease diagnosis. This would make strategies to intervene before irreparable brain damage occurs possible.

To learn more, click the red button below.

Your Body's Disease Defenses

Every day while you eat, sleep, work, and play, battles are being fought throughout your body. You rarely feel it. But bacteria, viruses, and other microbes are constantly invading from the outside world.

Your body has a defense system for such invaders. It's called the immune system. Your immune system is made up of trillions of cells and proteins. These are found in your blood and every organ of your body. The immune system learns and changes over your lifetime—even before birth.
Adapting Activities for People With Alzheimer's Disease

Doing things we enjoy gives us pleasure and adds meaning to our lives. People with Alzheimer's disease need to be active and do things they enjoy. However, it's not easy for them to plan their days and do different tasks.

People with Alzheimer's may have trouble deciding what to do each day, which could make them fearful and worried or quiet and withdrawn, or they may have trouble starting tasks. Remember, the person is not being lazy. He or she might need help organizing the day or doing an activity.

To learn more, click the red button below.

Providing Care for a Person With a Frontotemporal Disorder

People living with frontotemporal disorders, sometimes called frontotemporal dementia, can have a range of symptoms, including unusual behaviors, emotional problems, trouble communicating, and difficulty walking. Caring for someone with a frontotemporal disorder (FTD) can be hard, both physically and emotionally. Caregivers may face challenges with managing the medical and day-to-day care, as well as changing family and social relationships, loss of work, poor health, stress, decisions about long-term care, and end-of-life concerns.

To learn more about, click the red button below.
Long-Distance Caregiving: Twenty Questions and Answers

If you live an hour or more away from a person who needs care, you can think of yourself as a long-distance caregiver. This kind of care can take many forms—from helping with finances or money management to arranging for in-home care, from providing respite care for a primary caregiver to creating a plan in case of emergencies.

Many long-distance caregivers act as information coordinators, helping aging parents understand the confusing maze of new needs, including home health aides, insurance benefits and claims, and durable medical equipment.

The National Institute on Aging offers a booklet Long-Distance Caregiving: Twenty Questions and Answers intended to serve as a gateway to ideas and resources that can help make long-distance caregiving more manageable and satisfying.

To learn more, click the red button below.

VIEW THE BOOKLET >
Healthy Eating and Alzheimer's Disease

Eating healthy foods helps everyone stay well. It’s even more important for people with Alzheimer’s disease.

When the person with Alzheimer’s disease lives with you:

- Buy healthy foods such as vegetables, fruits, and whole-grain products. Be sure to buy foods that the person likes and can eat.
- Give the person choices about what to eat—for example, “Would you like green beans or salad?”
- Buy food that is easy to prepare, such as premade salads and single food portions.

To learn more, click the red button below.

Changes in Intimacy and Sexuality in Alzheimer's Disease

Alzheimer’s disease can cause changes in intimacy and sexuality in both a person with the disease and the caregiver. The person with Alzheimer’s may be stressed by the changes in his or her memory and behaviors. Fear, worry, depression, anger, and low self-esteem (how much the person likes himself or herself) are common. The person may become dependent and cling to you. He or she may not remember your life together and feelings toward one another. The person may even fall in love with someone else.
People with dementia experience a range of symptoms related to changes in thinking, remembering, reasoning, and behavior. Living with dementia presents unique challenges, but there are steps you can take to help now and in the future.

Alzheimer’s disease and related dementias get worse over time. Even simple everyday activities can become difficult to complete. To help cope with changes in memory and thinking, consider strategies that can make daily tasks easier. Try to adopt them early on so you will have more time to adjust.

To learn more, click the red button below.

---

Getting Help with Alzheimer's Caregiving

Some caregivers need help when the person is in the early stages of Alzheimer's disease.
Other caregivers look for help when the person is in the later stages of Alzheimer’s. It's okay to seek help whenever you need it.

As the person moves through the stages of Alzheimer's, he or she will need more care. One reason is that medicines used to treat Alzheimer's disease can only control symptoms; they cannot cure the disease. Symptoms, such as memory loss and confusion, will get worse over time.

Because of this, you will need more help. You may feel that asking for help shows weakness or a lack of caring, but the opposite is true. Asking for help shows your strength. It means you know your limits and when to seek support.

To learn more, click the red button below.

---

February 22nd Is Heart Valve Disease Awareness Day

Even though as many as 11 million Americans are affected by heart valve disease, public awareness of the disease is shockingly low. The seriousness of the disease, combined with the fact that symptoms are often difficult to detect or dismissed as a normal part of aging, makes this lack of awareness dangerous. While heart valve disease can be disabling and deadly, it can usually be successfully treated in patients of all ages if treated in time, making education and awareness particularly important.

The Heart Valve Disease Awareness Day campaign takes place every February 22nd during American Heart Month. The goal of this initiative is to provide allies and partners with easy-to-understand messages that can easily be incorporated into outreach efforts. It includes social media graphics, videos, magazine inserts and other tools to enable others to spread the word about valve disease.

To learn more about raising awareness of Heart Valve Disease Awareness Day, click the red button below.

How Family Caregivers Can Help When Personal Hygiene Is a Problem

Pamela Toto’s 102-year-old client had a problem: She was able to live alone, with help from her son, but getting in and out of her shower, where she had a chair and a handheld nozzle, was too difficult.

So, Toto, an occupational therapist, showed the son how to safely help his mother into her shower chair.
But, Toto says, “they didn’t do it.” She learned why in a talk with the son: “He said, ‘I do everything for my mom, but I just don’t want to see her naked.’” Toto helped the pair find a solution: a wrap-around towel robe the woman already had that she could wear on the way into and out of the shower.

It was a good illustration, Toto says, of the challenges, both practical and emotional, that caregivers and care recipients face when someone needs help with showering, using the toilet or other intimate hygiene tasks.

To learn more, click the red button below.

How Caregivers Can Counter Family Gaslighting

Intentionally misleading someone to believe something that isn’t true is often called gaslighting, named for the Alfred Hitchcock–directed 1944 movie Gaslight, in which a devious husband uses trickery and deception to manipulate his gullible wife into thinking she’s losing her mind. The term has become part of common parlance in our polarized age of decreased trust in institutions and one another.

People may feel gaslit by friends who are warm and supportive to their faces but bad-mouth them behind their backs; when caught, the gaslighter will say the person is crazy that they thought the comments were about them. An employee may complain of being gaslit by a boss who promises an increased bonus for working longer hours and then reneges, denying having made such a claim. And caregivers may feel gaslit by other family members who deliberately twist the truth about a care receiver’s needs or the caregiver’s responsibilities, to increase that caregiver’s sense of duty and guilt.

Does Exercise Really Help Aging Brains? New Study Raises Questions

Exercise and mindfulness training did not improve older people’s brain health in a surprising new study published this week in JAMA. The experiment, which enrolled more than 580 older men and women, looked into whether starting a program of exercise, mindfulness — or both — enhanced older people’s abilities to think and remember or altered the structure of their brains.

Alzheimer's Tied to Cholesterol, Abnormal Nerve Insulation

The protein apolipoprotein E (APOE) plays a key role throughout the body. It helps to transport cholesterol and other fatty molecules, or lipids. The gene that produces APOE comes in a few different varieties. The most common is called APOE3.
The most notorious is APOE4, which has long been linked to an increased risk of dementia in Alzheimer’s disease. People who inherit one copy of the APOE4 gene have up to a fourfold greater risk of developing Alzheimer’s disease dementia.

To learn more, click the red button below.

Vascular Dementia: Causes, Symptoms, and Treatments

Vascular dementia refers to changes to memory, thinking, and behavior resulting from conditions that affect the blood vessels in the brain. Cognition and brain function can be significantly affected by the size, location, and number of vascular changes.

People with vascular dementia almost always have abnormalities in the brain that can be seen on MRI scans. These abnormalities can include evidence of prior strokes, which are often small and sometimes without noticeable symptoms. Major strokes can also increase the risk for dementia, but not everyone who has had a stroke will develop dementia.

To learn more, click the red button below.

What Are the Signs that an Aging Parent Needs Help?

When caring for an aging parent or relative from afar, it can be hard to know when your help is needed. Sometimes, your parent will ask for help. Or, the sudden start of a severe illness will make it clear that assistance is needed. But, when you live far away, some detective work might be necessary to uncover possible signs that support or help is needed.

To learn more, click the red button below.
Can a Hobby Keep Dementia at Bay? Experts Weigh In

To many, the word “hobby” signifies something lightweight or trivial. Yet taking on a new hobby as one ages might provide an important defense against dementia, some experts say.

About 5.8 million adults over 65 in the United States live with Alzheimer’s disease or other dementia disorders, according to the Centers for Disease Control and Prevention. One in 9 Americans over 65 has Alzheimer’s, according to the Alzheimer’s Association. And although the rate of dementia may be falling thanks to lifestyle changes, more of us are living longer, which means the societal burden of dementia is rising.

To learn more, click the red button below.

Know Your Rights: Caregivers and Nursing Home Debt

Helping someone you love to move into a nursing home can be stressful enough. Nursing homes should not try to make you personally responsible for a loved one’s bill as a condition of admission.

To learn more, click the red button below.
Finding Dementia Care and Local Services

A person with dementia will need more care as symptoms worsen over time. Problems with memory, thinking, and behavior often present challenges for those with dementia as well as for their family members. Whether the disease is in early or late stages, there are support systems, resources, and services that can help.

While it can be difficult for some to admit they need assistance with care or caregiving, it is okay to ask for help. Alzheimers.gov has provided a set of tips and resources for finding assistance in your local area.

To learn more, click the red button below.

Caring for the Caregivers is Part of Optimal Age-Friendly Care
Recently, the Institute for Healthcare Improvement has deepened its commitment to supporting caregivers of older adults. The John A. Hartford Foundation has provided funding for Rush University Medical Center to partner with IHI on the Caregiver Intervention (4Ms-CGI) program, which has two goals: 1) transform how the staff of health systems think about and interact with family caregivers; and 2) provide programs and services for family caregivers to address their own needs and help them provide a reasonable amount of care for the older adult in their lives.

When Should Family Caregivers Apply for Medicaid for a Loved One?

Imagine your parent or spouse has had a fall or a stroke and is hospitalized. Usually, the following days and weeks are spent getting him or her stable, talking to family and doctors, and wrapping your mind around the incident that happened. It can be a shocking and overwhelming time. Often, these events are the beginning of a major life shift where the family has to come to terms with a loved one’s changing needs and abilities. Where will he live? Who will take care of him? Do we have the right documents in place or do we need to go to court for assistance? And who’s going to pay for everything?

Caregivers during Emergencies

The purpose of Search. Find. Help. is to help leaders and staff of organizations serving community-dwelling older adults and their caregivers find resources they can use to support these populations during all types of public health emergencies, including disease outbreaks like COVID-19, natural disasters, and severe weather.

The site includes resources addressing social isolation, managing chronic conditions, elder abuse and neglect, caregiver support, delayed medical care, and emergency preparedness.

Search. Find. Help. has been updated with **over 60 new resources** to support older adults during other public health emergencies such as natural disasters and severe weather with a focus on disproportionately affected populations, including Tribal populations and people with disabilities.

NORC at the University of Chicago has provided an action plan to help organizations select, adapt, and implement programs to meet the needs of their communities. To view the action plan click the red button below.

The Hurdles Facing Black Families Navigating Serious Illness -- Podcast

Serious illnesses like cancer and kidney failure are painful for patients and hard on their caregivers. Services like hospice and palliative care exist to support families and ensure their loved ones live easier lives and die more comfortable deaths. But data show Black individuals are less likely to have their pain treated and less likely to use hospice and palliative care.

In this Tradeoffs podcast episode from November 10, 2022 — the latest in a series made possible by the Better Care Playbook — a researcher details ways to make this care more equitable and a caregiver shares her family’s journey navigating a serious illness.

To listen the podcast, click the red button below.
Family Caregiving for People with Cancer and Other Serious Illnesses: A Workshop

On May 16 and 17, 2022 the Roundtable on Quality Care for People with Serious Illness, the National Cancer Policy Forum and the Forum on Aging, Disability and Independence will host a collaborative public workshop that will examine opportunities to better support family caregiving for people with cancer or other serious illnesses.

The proceedings summarize presentations and discussions from the May 2022 workshop, which was hosted by the Roundtable on Quality Care for People with Serious Illness, the National Cancer Policy Forum and the Forum on Aging, Disability, and Independence. To view the archived videos and presentations, please see the project Webpage.

Grandfamilies and Kinship Support Network: A National Technical Assistance Center

The Grandfamilies & Kinship Support Network is the first-ever national technical assistance center for those who serve grandfamilies and kinship families. The Network
exists, free of charge, to offer a new way for government agencies and nonprofit organizations in states, tribes, and territories to collaborate and work across jurisdictional and systemic boundaries—all to improve supports and services for grandfamilies and kinship families. Our work is rooted in cultural competence and linguistically appropriate approaches and is fully accessible to people with disabilities.

The Grandfamilies & Kinship Support Network will create lasting change for families around the country by connecting and supporting:

- Policy and program leaders at government agencies in states, tribes, and territories within aging/elder/senior services, child welfare, disability, education, housing, nutrition, Medicaid and Medicare, and Temporary Assistance for Needy Families (TANF);
- Kinship navigators; and
- Leaders of nonprofit, community-based, and faith-based organizations focused on supporting grandfamilies and kinship families.

**What Do We Know About Healthy Aging?**

Many factors influence healthy aging. Some of these, such as genetics, are not in our control. Others — like exercise, a healthy diet, going to the doctor regularly, and taking care of our mental health — are within our reach. Research supported by National Institute on Aging and others has identified actions you can take to help manage your health, live as independently as possible, and maintain your quality of life as you age. Read on to learn more about the research and the steps you can take to promote healthy aging.

Legal and Financial Planning for People with Dementia

Many people are unprepared to deal with the legal and financial consequences of a serious illness such as Alzheimer's disease or a related dementia. Legal and medical experts encourage people recently diagnosed with a serious illness — particularly one that is expected to cause declining mental and physical health — to examine and update their financial and health care arrangements as soon as possible. Basic legal and financial documents, such as a will, a living trust, and advance directives, are available to ensure
that the person’s late-stage or end-of-life health care and financial decisions are carried out.

I Am Not Alone Care Alliance

ianacare, the market leader in family caregiver benefits, is now forming the “I Am Not Alone Care Alliance” to create a full infrastructure of support across all sectors. They have galvanized key leaders and influencers from Fortune 500 companies, digital health, public sectors, and HR & benefits communities to lead the conversation and shape the future of caregiving resources. Designed for action and launched during National Family Caregivers Month, the I Am Not Alone Care Alliance will change the way public and private sectors work together to amplify the voice of millions of family caregivers and to fill the gaps - so no caregiver does this alone.

Support for Families When a Child Has Cancer

When a child has cancer, every member of the family needs support. Parents often feel shocked and overwhelmed following their child's cancer diagnosis. Honest and calm conversations build trust as you talk with your child and his or her siblings. Taking care of yourself during this difficult time is important; it's not selfish. As you dig deep for strength,
reach out to your child’s treatment team and to people in your family and community for support.

What Is Long-Term Care?

Long-term care involves a variety of services designed to meet a person's health or personal care needs during a short or long period of time. These services help people live as independently and safely as possible when they can no longer perform everyday activities on their own.

Long-term care is provided in different places by different caregivers, depending on a person's needs. Most long-term care is provided at home by unpaid family members and friends. It can also be given in a facility such as a nursing home or in the community, for example, in an adult day care center.

Veteran Caregiver Kids: America Wants to Hear Your Story

A new initiative is seeking out the voices of America’s military-connected caregiving youth to further shine a light on the experiences of “hidden helpers” — children living with and serving wounded, ill or injured service members and veterans.

Children and young adults are asked to submit their stories in the way they want to tell them — through writing, drawing, film, photography or other means.

To learn more, click the red button below.
Getting Started Guide for New Caregivers

When many people hear the word caregiver, they tend to think of someone who takes care of a disabled relative and acts almost like a home nurse while also taking care of finances, cooking, and cleaning. That's not wrong, but not all caregivers play such an involved role. Being a caregiver can mean a lot of things.

Mental Health America (MHA) has released a guide for new caregivers. Its specific focus is on people who care for someone who has been recently diagnosed with a mental health condition.

Saving Money with the Inflation Reduction Act

The Inflation Reduction Act will save money for people with Medicare by improving access to affordable treatments and strengthening the Medicare program.

The cost of a month's supply of each Part D-covered insulin will be capped at $35, and you won't have to pay a deductible for insulin, starting on January 1, 2023.

If you have drug costs high enough to reach the catastrophic coverage phase in your Medicare drug coverage, you won't have to pay a copayment or coinsurance, starting in 2024.

Legacy Lessons from the Sages of Aging

Curated from twelve hours of interviews with 12 of the diverse set of legendary pathfinders in the fields of aging, Legacy Lessons from the Sages of Aging is a 90-minute powerful and inspirational documentary for students and professionals in gerontology, social work, healthcare, medicine, nursing, law, housing, psychology, and other professions who work to meet the needs of older adults.

Planning for the Future After a Dementia Diagnosis

If you or a loved one has been diagnosed with Alzheimer’s disease or a related dementia, it may be difficult to think beyond the day to day. However, taking steps now can help prepare for a smoother tomorrow.

Over time, the symptoms of Alzheimer’s and related dementias will make it difficult to think clearly. Planning as early as possible enables you to make decisions and communicate those decisions to the right people.
How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion. This is best done when there is not an emergency. A calm conversation about what kind of care is wanted and needed now, and what might be needed in the future, can help avoid a lot of confusion.

Decide who will be responsible for which tasks. Many families find the best first step is to name a primary caregiver, even if one is not needed immediately. That way the primary caregiver can step in if there is a crisis.

Agree in advance how each of your efforts can complement one another so that you can be an effective team. Ideally, each of you will be able to take on tasks best suited to your skills or interests.

Look for the Helpers: Providing Support to Older Adults

People age 50 and above commonly provide health, personal, and other types of care and support to other older adults living with chronic conditions or disabilities. This support is often essential for aging in place and managing chronic conditions. In July 2022, the University of Michigan National Poll on Healthy Aging asked a national sample of U.S. adults age 50–80 about their experiences helping an adult age 65 or older with health, personal, and other types of care needs.

To learn more about the poll’s findings, click the red button below.
Family caregivers play an important role in states’ efforts to help Medicaid beneficiaries safely remain in their communities. And, as of August 2022, at least seven states (Connecticut, Georgia, Indiana, Louisiana, Missouri, North Carolina, and South Dakota) covered structured family caregiving (SFC) services provided to older adults and/or people with physical disabilities under their Medicaid programs. Coverage of SFC services results in Medicaid payments and other support to family caregivers, usually including spouses and others who are legally responsible for the beneficiary. This brief, which is based on research and interviews with state staff, examines how Georgia, Missouri, and South Dakota are using Medicaid-funded SFC services to help older adults remain in the homes they share with their loved ones.

SFC services consist of a package of services that support home and community-based services (HCBS) waiver participants’ primary caregivers and includes payment, individualized training based on the needs of the waiver participant, coaching, back-up or respite care, and other supports. All interviewees emphasized that they valued SFC services because they enabled HCBS waiver participants who do not self-direct services to receive the personal care they need in their homes from people they know and trust.

Georgia and South Dakota offer SFC services to both older adults and people with disabilities enrolled in Medicaid. Missouri, however, offers the services only to Medicaid beneficiaries with Alzheimer’s or a related diagnosis. In all three states, Medicaid beneficiaries must be enrolled in an HCBS waiver to qualify for SFC services. As of July 2022, Missouri was providing SFC services to 62 waiver participants, and South Dakota was providing them to 217 participants. Also, all three states administer their SFC services through agencies, which are entities (usually home health providers) that have agreed to provide the services. Interviewees reported that approach enabled their states to implement the service without new staff resources and helped ensure appropriate oversight of the care delivered to Medicaid beneficiaries.

Caring for someone with chronic obstructive pulmonary disease (COPD) might be new for you. It is a condition that can be hard to understand and manage. COPD is a group of lung diseases including emphysema and chronic bronchitis, or both — that block airflow in the lungs. This makes breathing difficult for people living with COPD.

Caregivers who feel confident about what to do often provide better care for their loved ones. “The COPD Caregiver’s Toolkit” offers advice on a variety of topics for patients and caregivers, including how to prepare for doctors’ appointments, navigate changes in home life, provide help after a COPD flare-up or hospital stay and stay mentally and physically healthy through it all.

Acceptance & Letting Go

We cannot control everything; we can only control our responses. On our caregiver journey, we often want to assert control over situations in order to show love or support. Sometimes the best way to provide care to our loved ones is to practice radical acceptance and letting things go.

Letting go is hard for everyone at first. Courage to Caregivers has put together some tips and philosophies on acceptance.
Potential Contributor to Sex Differences in Alzheimer's Risk

Alzheimer's disease, which can destroy the ability to think, learn, and remember, is more common in women than men. The reasons for this disparity between the sexes are not well understood.

Women are known to have greater levels of tau protein abnormally build up in brain cells over their lives. The structures that form, called tau tangles, are one of the hallmarks of Alzheimer’s disease.

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they
may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough.

At first, many older adults pay for care in part with their own money. Initially, family and friends may provide personal care and other services, such as transportation, for free. But as a person’s needs increase, paid services may be needed.

Older adults may be eligible for some government health care benefits. Caregivers can help by learning more about possible sources of financial help and assisting older adults in applying for aid as appropriate.

Caring for a Person Who Has Intellectual Developmental Disabilities

An intellectual or developmental disability affects a person’s ability to live, attend school, and work independently. A person may need support with cooking, banking, transportation, social situations, health care visits, and jobs. Three of the best-known intellectual or developmental disabilities are Down syndrome, autism, and traumatic brain injury (TBI). Many families care for a person who has an intellectual or developmental disability. It could be a young child, an adult child who lives at home with their parents, or even an adult sibling.

To learn some tips about caring for someone with intellectual developmental disabilities, click the red button below.
Daily Multivitamin May Improve Cognition in Older Adults

Alzheimer’s disease and related dementias affect more than 46 million people worldwide. Safe and affordable treatments to prevent cognitive decline in older adults are urgently needed. In response to this need, certain dietary supplements have been touted as having protective effects on cognition.

Taking Care of Yourself: Tips for Caregivers

Being a caregiver can be extremely rewarding, but it can also be overwhelming. It’s not uncommon to feel lonely or frustrated with everyone around you, from the care recipient to the doctors. That’s why taking care of yourself is one of the most important things you can do as a caregiver. Here are a few things you can do to care for yourself:

- Stay physically active. Try doing yoga or going for a walk.
- Eat healthy foods. Nutritious food can help keep you healthy and give you energy.
- Join a caregiver support group online or in person. Meeting other caregivers will give you a chance to share stories and ideas.

Giving Care: An Approach to a Better Caregiving Landscape in Canada

Unpaid caregivers and paid care providers make up the largest part of Canada's healthcare and social supports systems. Research shows that they provide approximately three hours of care for every hour provided through the rest of our systems. They help seniors living in the community or in long-term care settings; children and adults with physical, intellectual, or developmental disabilities; people with medical conditions; people experiencing mental illness; and people with changing support needs related to aging.

On November 7, 2022, the Canadian Centre for Caregiving Excellence released its first policy white paper – Giving Care: An approach to a better caregiving landscape in Canada. The report aims to ignite a public conversation on the state of caregiving and
offer potential policy solutions to address the many challenges and systemic issues experienced by Canada's 8+ million caregivers and care providers across the country.

Understanding and Treating Depression

It's normal to feel sad, down, or low at times. But these feelings can sometimes linger. They can get worse, too, eventually making it hard to do basic daily tasks. If you've had a depressed mood or a loss of interest or pleasure in most activities for at least two weeks, you may be experiencing depression.

Depression is a serious disorder. "It's not some-thing that you can just 'push through,' or get through without help," says Dr. Kymberly Young, a mental health researcher at the University of Pittsburgh.

Depression isn’t caused by a single thing. Some people’s genes put them at risk for depression. Stressful situations may trigger depression. Examples include money problems, the loss of a loved one, or major life changes. Having a serious illness like cancer or heart disease can also lead to depression. And depression can make such illnesses worse.

Long-Distance Caregiving

Anyone, anywhere, can be a long-distance caregiver, no matter your gender, income, age, social status, or employment. If you are living an hour or more away from a person who needs your help, you’re probably a long-distance caregiver. This kind of care can take many forms—from helping with money management and arranging for in-home care to providing respite care for a primary caregiver and planning for emergencies.

The U.S. National Institute on Aging provides a number of resources for long-distance carers. To learn more, click the red button below.

If You’re About to Become a Cancer Caregiver

Today, most cancer treatment is given in outpatient treatment centers – not in hospitals. This means someone is needed to be part of the day-to-day care of the person with cancer and that sicker people are being cared for at home. As a result, caregivers have many roles. These roles change as the patient’s needs change during and after cancer treatment.

To learn more about cancer caregiving, click the red button below.

Adult Day Care

Adult Day Care Centers are designed to provide care and companionship for older adults who need assistance or supervision during the day. Programs offer relief to family members and caregivers, allowing them to go to work, handle personal business, or just relax while knowing their relative is well cared for and safe.

The goals of the programs are to delay or prevent institutionalization by providing alternative care, to enhance self-esteem, and to encourage socialization. Adult day health care offers intensive health, therapeutic, and social services for individuals with serious medical conditions and those at risk of requiring nursing home care.

Hospital Discharge Planning: A Guide for Families and Caregivers

A trip to the hospital can be an intimidating event for patients and their families. As a caregiver, you are focused completely on your family member or friend’s medical care, and so is the hospital staff. You might not be giving much thought to what will happen when your friend or family member leaves the hospital.

Everything about this transition – whether the discharge is to home, a short-term rehabilitation (“rehab”) center, or a residential nursing facility – is critical to the health and well-being of the person you care for. Yet, while it’s a significant part of the overall care plan, there is a surprising lack of consistency in both the quality and process of discharge planning across the health care system.

Alzheimer's Disease Research Centers: National Research Centers, Local Resources

The Alzheimer’s Disease Research Centers (ADRCs) offer local resources, support, and opportunities to participate in research on Alzheimer’s disease and related dementias. These centers are dedicated to developing and testing new ways to detect, diagnose, treat, and prevent dementia and to improving care for people with these diseases and their families. The National Institute on Aging (NIA) at the National Institutes of Health (NIH) funds more than 30 ADRCs at medical institutions across the country. Each center has specific scientific and population areas of focus.

For families affected by Alzheimer’s and related dementias, ADRCs offer:

- Help with obtaining diagnosis and managing your care
- Information about the diseases, services, and resources
- Opportunities for volunteers to participate in clinical trials and studies that contribute to improved understanding of dementia, which may lead to new treatments and better care
- Support groups and other special programs for volunteers and their families
