

THIS WEEK IN CAREGIVING

January 4, 2023

CAREGIVING IN THE NEWS

Supporting Working Parents Means Supporting Invisible Caregivers

At a time when there's not enough affordable, accessible child care to go around, invisible caregivers play a critical role in keeping the workforce afloat. Often referred to as family, friends and neighbors (FFN), invisible caregivers provide care for an estimated 60% of American children, making them the most meaningful child care solution for the vast majority of working parents.

New Alzheimer's Drug Brings Hope - and Tough Choices for Patients, Caregivers

After many decades of little or no progress in treating the dementia associated with Alzheimer's, a new drug now offers hope to patients and caregivers. Lecanemab, announced late last month, was found in clinical trials to slow cognitive decline in early-stage Alzheimer's patients. "It's an extremely encouraging result," says Dr. David Wolk, co-director of the University of Pennsylvania's Penn Memory Center.

What Happens When a Family Caregiver Needs Caregiving?

Mary Ann Evans, now 82, was a long-time caregiver to her 102-year-old mother. Evans experienced a crisis when her mother's ability to be independent suddenly changed.

"My mother had lived with me for 15 years and her health had started to decline," she says. Then, as Evans relays, her mother suffered a serious fall. The aftermath was grave.

NAC NEWS AND UPDATES

Caregiving is
an emotional
experience.

CALL: 1.888.665.2190

to tell us about the challenges and joys
you experience as a family caregiver.

The National Alliance for Caregiving Opens Phone Line for Family Caregivers to Talk About Their Mental Well-Being

Sponsored by Travers Therapeutics, the National Alliance for Caregiving is spearheading a project to advance the mental well-being of family caregivers in the United States. NAC wants to hear from family caregivers on the joys, challenges and struggles they've faced on their caregiving journey in order to better understand their needs and the supports and interventions that can be introduced to assist them.

If you're a family caregiver or have cared for someone in the past, call **1-888-665-2190** to share your caregiving story and the feelings associated with it.

If you would prefer to write out your response rather than leave an audio message, you may do so [here](#).

We want to know:

- What joys have you experienced as a caregiver?
- How are you feeling about being a caregiver?
- What are challenges you have faced as a caregiver?
- What are concerns you have about providing care?

The message you leave will inform policy and practice efforts to improve support for family caregivers like you! All messages left will be anonymous, with only the transcript being used to help us advocate for change.

LEARN MORE

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. [Assessing the Pain of Care Recipients: Tools Available to Family Caregivers](#) utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

NAC Releases New Report: Chronic Disease Family

Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America's 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it's needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC's report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

World Carers Conversation 2022 Session Recordings

World Carers Conversation returned May 19, 2022 as a global, virtual event with the support of EMD Serono and Embracing Carers. Innovators, researchers, policymakers and carer advocates from around the globe learned about advancements in the field, got inspired, and made connections that matter for the future of carers everywhere. These recordings cover the primary conversations and topics discussed.

To view the slide deck used in the event, click [here](#). To view the recordings, click below.

Global Voices of Caregiving: A PhotoVoice Project

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn't

work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver's own experience and tells a diverse story of what it's like to care for others, an act which connects us all.

To view and hear these stories, please click on the red button below.

“
I am always learning from and sharing with my fellow carers how to care for myself while caring for my loved one.

How Trauma Effects Children, for Parents and Caregivers

January 11, 2023 | 6:00 PM - 8:00 PM ET | Online

This workshop is designed to provide introductory information about the impact of trauma and the power of relationships to help children heal. The more parents and caregivers understand how trauma effects children, the more they will understand the reasons for kids' behaviors and emotions, and the more they will be able to help them cope.

TBRI/Connection Study Caregiver Training

Tuesdays, January 17 - March 28, 2023 | 12:30 PM - 2:00 PM ET | Online

Join this 12-week class by the Initiative for Vulnerable Children and learn how to help those impacted by trauma with a faith-based TBRI training.

All families face difficulties. But for some, those challenges can be intense and complex. When risk factors such as biological, emotional or physiological trauma interrupt a child's development, additional support is needed. This workshop will provide you with proven tools to develop closer connections with these children built on evidence-based techniques. Parents of all sorts (foster, adopt, bio, kinship etc.) are encouraged to attend.

This 12-week study is taught by Meg Graham and Julie Burton. Julie is a TBRI Practitioner trained by the Karyn Purvis Institute of Child Development. Julie is an experienced Foster Mom, Adoptive Mom, Bio Mom, Former Teacher and CASA Volunteer. This course covers ACEs and TBRI. Registration is required so that we can send you the Zoom link. The Program is based on The Connected Child book.

Sharing the Care for Families Dealing with Alzheimer's Disease or Related Dementias: Alabama's PANDA Project

January 18, 2023 | 2:00 PM - 3:00 PM ET | Online

The PANDA Project (Providing Alzheimer's N' Dementia Assistance) was piloted in Alabama in 2019, through funding provided by the Administration for Community Living (ACL). PANDA provides supportive services, including person-centered care plans, education, and training, for people living with dementia (PLWD), aging adults with intellectual and developmental disabilities and their caregivers. Statistics show there are an estimated 15.7 million adult family caregivers caring for someone who has Alzheimer's disease or other dementias in the United States, and many caregivers cannot recognize when they are experiencing the early signs of burn-out. This project is unique as Alabama AAAs are working together to provide consistency in the dementia services provided throughout their areas of the state and are keeping their local and state leaders informed of their work as part of their sustainability planning.

Transforming Hardship into Healing

January 18, 2023 | 6:00 PM - 7:00 PM ET | Online

Health challenges can be daunting. The disorienting and confusing nature of a health issue tends to put a strain on relationships; conflicts, changing roles, shifting expectations, sensitive and uncomfortable topics can all add to the messy mix. Whether in a caring dynamic at home, in a clinical or organizational setting, we may find ourselves having difficult conversations. Many relationships, familial and professional alike, snap under the pressure of disagreement.

Tune in on January 18th for a workshop led by Joe Weston that will guide participants through the murky waters of how to have difficult conversations - how does one bend

rather than break in tense confrontations? Whether you're dealing with, or caring for someone with a health challenge, working in a caring profession and trying to understand how to better relate to peers, or even working towards a shift in your organizational culture, Joe will offer tried and true insights about how to transform hardship into healing relationships.

Joe Weston is an author, educator, and guide. With a career spanning 30+ years in the fields of conflict prevention, leadership, stress management, and communication, he is a highly sought-after facilitator for individuals, as well as corporations, government agencies, and nonprofits around the world.

Looking Ahead: A Road Map for Caregivers in Times of Need

January 19, 2023 | 1:00 PM - 2:30 PM ET | Online

Caregiving is a labor of love that many perform willingly. We know that life is full of surprises and despite their best intentions, there may be times that caregivers may need to step back from their role to care for themselves. If you are a caregiver, do you have a plan for your loved one in the event that you need to take a break from caregiving?

Join Acclaim Health and Regional Learning Centre for this 1.5 hour webinar where we will discuss:

- How to identify your circle of support
- Important documents to have in place
- Community resources
- How to create an emergency plan

Understanding Aggression Toward Family/Caregivers in Childhood Adolescence

January 19, 2023 | 7:00 PM - 8:30 PM ET | Online

AFCCA refers to Aggression towards Family/Caregivers in Childhood & Adolescence. AFCCA can be a difficult subject to talk about, and parents/caregivers often share they feel shame, stigma, and isolation when they do seek help. Everyone involved—including the youth themselves—is at risk of physical and/or psychological harm, as well as family instability and possible breakdown.

We know that families need understanding, and we offer a welcome, accepting community who are walking similar paths. Please join us for an evening with Adopt4Life's AFCCA Family Supports Program Team as we explore the complexities of AFCCA including common challenges and promising interventions to improve safety and strengthen families including non-violent resistance (NVR), de-escalation techniques, and building circles of support.

Managing Changes in Movement and Sensation

January 23, 2023 | 8:30 AM - 10:00 AM ET | Online

This Zoom meeting presented by Dementia Carers Count on January 23rd (8:30 AM) will explore how changes in the brain affect everyday tasks

It will be an opportunity to focus specifically on some of the motor and sensory challenges which can occur for a person with dementia alongside support strategies which can really impact on the well-being of the person and your ability to cope with the challenges. These challenges may include sequencing everyday tasks such as getting dressed, eating a meal, sensations, and spatial awareness. By understanding the challenges for the person with dementia, this session will provide you with the knowledge that you have the ability and skills to support some of these challenges.

This session is for you if:

- you would like to learn about how changes in the brain can affect what the person senses and the complexity of the everyday tasks we complete daily
- you would like some ideas for simplifying tasks and help the persons sensory awareness
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

Essentials of Caregiving: Advance Directives

January 25, 2023 | 11:30 AM - 1:00 PM ET | Online

This presentation will provide a broad overview of the steps you can take to prepare for your future care and the care of your family member(s) living with dementia. We will cover Medical Power of Attorney (MPOA), living wills, and out-of-hospital DNRs.

Communicating your wishes to your family and providers is critical in ensuring you are provided care that aligns with your values and preferences. We can never anticipate what might happen and the possibility that we may be unable to communicate our wishes one day. Hosted by the Caring for the Caregiver program at the School of Nursing at UT Health San Antonio, this presentation will help you proactively prepare for your future and communicate what matters to you in terms of care.

Our presenter, Alaina Kuhn, RN, BSN, is completing her Doctorate of Nursing Practice at UT Health San Antonio. She has experience working across settings including critical care and has seen firsthand the importance of having advance directives in place. She will be joined by Stett Jacoby from the Law Offices of Carol Bertsch, who will be available to support discussion and answer questions.

To register for this event, click the red button below.

Meaningful Activity

January 30, 2023 | 8:30 AM - 10:00 AM ET | Online

Why is meaningful activity important for people with dementia?

Meaningful activity is important to help us all maintain a good quality of life, whether we are living with dementia or not. It is particularly important for people with dementia as it:

- Helps maintain skills and independence
- Helps maintain brain (cognitive) function
- Builds and preserves self-esteem and self-confidence
- Gives an outlet for self-expression
- Provides social and emotional connection

The type of meaningful activity a person with dementia will be able to engage in will depend on their interests, strengths and abilities.

Meaningful activity can vary from daily tasks such as cooking and cleaning, to art classes, watching films, exercise and spending time with family and friends.

Why join this session?

It is an opportunity to consider activities and why they are important to someone with dementia. The session explores different sorts of activities might meet the different needs of an individual. There will be some practical advice and strategies about how to engage someone in activities.

The course is for you if you would like to ...

- Know more about why activities are important
- Consider the different needs an individual has and how activities might meet these
- Learn some hints and tips about how to get someone involved in activities
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

CAREGIVER TELECONNECTION

Engaging Caregivers: A Program for Healthcare Workers

Thursdays, February 9 - February 23, 2023, 11:00 AM – 12:00 PM ET | Online

The Caregiver Teleconnection program has one-hour conference calls, at no cost. These sessions cover a wide range of interesting topics related to the care you provide to your loved one. You can get expert advice, ask questions and talk to other people who are also providing care.

Beginning on February 9th, join in for a three-session Caregiver Teleconnection program that will focus on defining roles and responsibilities with patients and caregivers, the role of diversity and culture, and where to find resources to help with difficult situations and elder abuse. Healthcare workers can better serve patients through partnership with caregivers, but there is limited formal training and support on how to engage caregivers which is the focus of this series. Certificate of attendance provided upon request. Certificate of attendance provided upon request.

To participate in these sessions, you can either log in using a laptop, tablet or phone. If you prefer to call in, a phone number will be provided within the Zoom registration confirmation email. If you have any questions or need further assistance, please call 1-866-390-6401 or email caregiverteleconnection@wellmed.org.

Caregiving Strategies: Caring & Supporting Adults Living with Heart Failure

February 9, 2023 | 12:00 PM - 1:00 PM ET | Online

Family caregivers play an invaluable part in supporting people living with heart failure. However, this role can be stressful and overwhelming, and it may be difficult for caregivers to balance their needs with their care recipient.

In recognition of Heart Month, join the Ontario Caregiver Organization on February 9th for a presentation given by two heart failure caregivers, Cindy Yip and John Yudelman, who will share their challenges, experiences, and helpful supports they found on their caregiver journeys. You will also hear from Dr. Phyllis Billia, cardiologist at UHN's Peter Munk Cardiac Centre. Dr. Billia specializes in heart failure, focused on patients undergoing advanced therapies. She will provide practical resources and explain care strategies and support for caregivers.

Coping with Stress as a Caregiver

Wednesdays, February 15 - March 8, 2023, 3:00 PM – 4:00 PM ET | Online

It's common for caregivers to sacrifice their own well-being while caring for others – and we're here to help you prioritize yourself. While caregivers are often compassionate and giving individuals, we too need time for cultivating our own wellness. You've likely heard the saying before that "you cannot pour from an empty cup." Taking care of ourselves and properly managing stress can help improve our lives – both in and out of our caregiving roles.

Join us for a 4-part workshop series for caregivers – focused on strategies for self-care and connecting with others to find support.

Learn how to use the stress-mapping model to cope with stress, restore your well-being, and safeguard your passion for this work.

Sessions are held virtually on Wednesdays from 3:00 to 4:00 pm ET on the following dates:

February 15th & 22nd, March 1st & 8th

Topics Include:

- *Balancing care for self with care for others
- *Mapping early warning signs of stress
- *Supporting one another with the implementation of self-care strategies

Yvette Garcia, M.A. has over 10 years of experience in supporting individuals to stay in touch with their personal "why" and bringing out the best in themselves while navigating the stressors of work and everyday life.

Why Dementia is Different for Everybody

February 22, 2023 | 8:30 AM - 10:00 AM ET | Online

Dementia affects each person in a different way, depending on multiple factors. These factors can include neurology, physical health, personality, our biography and background and the social environment in which we live. The signs and symptoms of dementia can therefore be quite different depending on the individual.

Did you know that there are more than 100 types of dementia? Understanding the different types of dementia, how they are diagnosed and their effects on different people is important in providing the best care for the person with dementia.

Presented by Dementia Carers Count in the UK, this introductory course on February 22nd, looks at the different factors that affect a person's experience of dementia and how these might influence the role of the carer.

Why join this session?

Whether the person you care for has a formal diagnosis or not, this session is for you. By better understanding dementia, you will be better equipped to deal with the challenges you both might have to face.

The course is for you if you would like to ...

- Gain a better understanding of your friend or family member
- Learn about the different factors which can contribute to a person's experience of having dementia
- Understand why no two people with dementia have the same experience
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment.
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

APRIL

**HEALTH AND AGING
POLICY FELLOWS**

Health and Aging Policy Fellowship 2023-2024 Call for Applications

Deadline to apply: April 17, 2023

With an aging population, one of the greatest challenges for the U.S. is ensuring that policies provide the best possible quality of life for all across all dimensions of society – from the communities where we live, the transportation we depend on, the food we eat, and the health care we receive. Success will require the translation of cutting-edge science

and practical clinical experience into sound health policy. The goal of the Health and Aging Policy Fellows Program is to provide professionals in health and aging with the experience and skills necessary to help lead this effort, and in so doing, shape a healthy and productive future for older Americans.

The Health and Aging Policy Fellows Program offers two different tracks for individual placement: (1) a residential track that includes a nine-to-12-month placement in Washington, D.C. or at a state agency (as a legislative assistant in Congress, a professional staff member in an executive branch agency or in a policy organization); (2) a non-residential track that includes a health policy project and brief placement(s) throughout the year at relevant sites. The project may be focused at a global, federal, state or community level.

In addition, through our partnership with the veterans health administration, VA employees can participate in the VA track as a non-residential fellow.

Core program components focused on career development and professional enrichment are provided for fellows in all tracks.

INTERVIEW STUDY WITH DEMENTIA CAREGIVERS

SHARE YOUR CAREGIVING STORY

Interview about Family Relationships and Wellbeing in Dementia

If you are a caregiver to a family member with dementia, you're invited to participate in an interview about your caregiving experiences and wellbeing. The interview will last approximately 60-90 minutes and can be completed over the phone or via Zoom. You will receive a \$10 Amazon gift card for participating. In order to participate you must:

- Be a caregiver to a FAMILY MEMBER living with dementia
- Be at least 18 years old

- Be able to read and speak English

This study has been approved by the University of Arizona Institutional Review Board.

To participate in this study, click on the red button below.

Communication in the Family

You are invited to be interviewed about your experiences and communication patterns as someone who currently (or in the past) cares for your family member living with Alzheimer's disease or another related dementia (ADRD). There are potentially things you are uncertain about regarding caring for your family member, and we are interested in how you communicate to manage these uncertainties. Uncertainty means the inability to predict what will happen or the unknown. For example, you might worry about your loved one's well-being because their dementia makes their behavior unpredictable.

You are eligible if you:

- Are at least 18 years old
- Used to or currently help care for one of your family members who lives/d with ADRD (by care, this includes but is not limited to: Eating, bathing, transferring, managing finances, medications, chores, shopping, etc.)

Co-Designing a Stress Management Toolkit for Families Living With Dementia

Researchers at Duke University would like to learn more about stress experienced by people living with dementia and their care partners, as well as about how families manage stress at home.

The goal of the project is to develop a toolkit of different things that people with dementia and their care partners can use on a daily basis to manage stress at home.

Focus groups will be held with dyads of people with dementia and their care partners together, and with care partners only. Groups will be held remotely using Zoom and are anticipated to last about 60-90 minutes. Participants will be compensated for their time.

Care2Sleep Education Program

Are you a care partner for a person with memory problems? Do you have problems sleeping?

Researchers at the University of California are testing an education program that teaches simple strategies to help care partners and people with memory problems sleep better.

Our research study involves:

- An initial health and sleep evaluation.
- 5 education sessions provided by a trained sleep educator.
- 2 follow-up evaluations.
- Optional collection of blood samples from care partners only.

Care partners may receive up to \$450 and care-receivers may receive up to \$300 for participating in this study.

This is not a medication study. You will not be asked to stop or begin taking any new medication.

This research study only applies to California residents.

DC Longitudinal Study on Aging and Specimen Bank

Start: January 1, 2007

End: January 2027

Enrollment: 1000

Where Is This Study Located? District of Columbia

What Is This Study About?

This study will examine the usefulness of various diagnostic tests for Alzheimer's disease, mild cognitive impairment, and other neurodegenerative disease. The study also aims to assess changes in biological, lifestyle, and cognitive assessments collected from individuals over time. The researchers will collect test information from participants either once in a single study visit or if the participant chooses, multiple times over several years. Participants will complete cognitive testing, lifestyle questionnaires, and provide blood and/or spinal fluid (optional) samples for biochemical and genetic testing. Test results will not be shared with participants, but the information will help improve diagnostic tools. Blood and spinal fluid samples will be also be stored in a specimen bank, without any information that would identify the participant, to be available to other researchers.

Do I Qualify To Participate in This Study?

Minimum Age: 45 Years

Maximum Age: N/A

Must have:

- Individuals with normal cognition or diagnosis of a neurodegenerative disorder (e.g., mild cognitive impairment, Alzheimer's disease or a related dementia)
- Participants ages 45-50, must have a first-degree relative with a neurodegenerative disease

To learn more about the study, contact Kelly McCann at (202)687-0413 or email her by clicking on the red button below.

Metformin for Alzheimer's Dementia Prevention

Start: April 23, 2021

End: April 30, 2026

Enrollment: 370

Where Is This Study Located? District of Columbia

What Is This Study About?

This study will test the effects of metformin, an FDA-approved medication to treat diabetes, on memory and other indicators of Alzheimer's disease in older adults who are overweight or obese and have mild cognitive impairment but do not have diabetes. Participants will be randomly assigned to take a placebo or extended-release metformin medication, by mouth, daily for two years. Researchers will conduct a physical exam and neuropsychological testing at the start of the study and every six months. Approximately half of participants will undergo MRI and amyloid PET brain scans at the start and end of the study.

Do I Qualify To Participate in This Study?

Minimum Age: 55 Years

Maximum Age: 90 Years

Must have:

- Diagnosis of amnesic mild cognitive impairment
- Fluency in English or Spanish
- No known history of diabetes
- No evidence of dementia based on general cognition and functional performance
- Vision and hearing sufficient to complete testing procedures
- Study partner to come to all appointments or be available by telephone at follow-up visits
- Participants who have a condition that prevents them from safely having an MRI (e.g., metal implants or devices, morbid obesity, claustrophobia, epilepsy, etc.) will still be able to participate in the study but will not undergo MRI procedure

Must NOT have:

- Current use of metformin
- History of intolerance to metformin
- Evidence of kidney or liver disease, congestive heart failure, and/or alcohol abuse
- History of cerebrovascular event (e.g., stroke) that resulted in neurological impairment

To learn more about the study, contact Katie Seidenberg at (202)687-5338 or email her by clicking on the red button below.

Study of Caregiving Couples

Start: April 19, 2021

End: August 1, 2025

Enrollment: 600

Where Is This Study Located? Massachusetts

What Is This Study About?

This longitudinal study will gather information about the characteristics of couple relationships in which one member identifies as a caregiver for their partner. The researchers will also evaluate how changes in mental health and cognition affect the health and well-being of both partners. The study couple will first complete a series of questionnaires to provide information about their health (physical, mental, and emotional), personality, social supports, and self-sufficiency. The caregiving partner will complete a second set of questionnaires. Questionnaires will be given again every six months for a total of three years. Each person will also be screened for cognitive impairment every six months, and those in the middle to advanced stages of dementia will no longer be able to participate in the study.

All study meetings will be conducted online using videoconferencing.

Do I Qualify To Participate in This Study?

Minimum Age: 65 Years

Maximum Age: N/A

Must have:

- In a committed relationship; all couples, regardless of sexual orientation or gender preference, are eligible to participate
- Both members of the couple must live together at the time of enrollment
- Stable internet connection and ability to stream video with sound
- Willing to have the audio of study comments recorded
- Speak English
- Live in the New York City or Boston metropolitan areas

Must NOT have:

- Prior diagnosis of schizophrenia or other psychotic disorder
- Prior diagnosis of a chronic, disabling medical condition that would make it impossible to participate in an online focus group
- Living in a nursing home or other long-term care facility

To participate in the study, call Rebecca Salant at (646)754-2249 or email her by clicking on the red button below.

Bowel Health Survey

For the past 3 years, the National Association For Continence has conducted a nationwide survey to learn more about bladder health and all of the physical, financial and emotional challenges that come along with it. However, incontinence isn't only a condition of the bladder – bowel problems can be just as troubling, if not more so. That's why this year NAFC is focusing its efforts on learning more about bowel health and how digestive conditions affect you.

NAFC is seeking participants who will complete the survey in order to provide important insight on the symptoms you deal with, your management strategies, your experience with physicians, the products you use, the mental impact it has, and the ways it can influence your relationships. Most of all, we want to learn how we can help make your life a little easier – after all, that's our first and most important priority.

Atorvastatin for Mild Cognitive Impairment

Start: May 21, 2021

End: Dec. 31, 2023

Enrollment: 20

Where is this Study Located? Maryland

What Is This Study About?

This Phase 2 clinical trial will test the ability of the FDA-approved drug atorvastatin to improve brain blood flow and cognition in older adults with mild cognitive impairment. After answering questions over the phone to determine eligibility, all participants will take an atorvastatin pill once every evening. At the start and end of the three-month study, participants will undergo MRI brain imaging, provide blood samples, and complete thinking and memory tests. Researchers will measure changes in cognitive function and blood vessel flow around the brain.

Do I Qualify To Participate in This Study?

Minimum Age: 60 Years

Maximum Age: 95 Years

Must have:

- Diagnosis of mild cognitive impairment, with:
 - Clinical Dementia Rating score of 0.5 or 1.0
- Cognitive scores (memory, processing speed, executive function, and language) > 1.5 standard deviations below the average of others with similar education and age

Must NOT have:

- History of dementia or any other neurological disease that could cause cognitive impairment
- Currently taking a statin medication, or have taken one in the last six months
- Known allergy or other adverse reaction to a statin
- Currently taking cyclosporine following organ transplant surgery
- Any condition that may make having an MRI brain scan unsafe (e.g., metal

shrapnel, heart pacemaker, severe claustrophobia, epilepsy, body size and shape that prevents comfortable fit in scanners)

- Current diagnosis of substance abuse
- History of stroke or heart attack in the past six months
- History of HIV

Navigating Family Caregiving: Personal Stories and Practical Tools

Join the National Center on Elder Abuse (NCEA) at the Keck School of Medicine of USC, the Los Angeles Caregiver Resource Center (LACRC) at the Leonard Davis School of Gerontology of USC, and the Diverse Elders Coalition with an esteemed panel of authors, caregivers, and practitioners for a panel discussion to celebrate National Family Caregivers Month. Panelists discussed navigating complex dynamics and boundaries in caregiving relationships, how professionals and agencies can respond more effectively to caregivers' needs, the impact of culture on caregiving, and strategies to identify and prevent elder mistreatment in caregiving relationships. A Q&A session followed the panel discussion.

RESEARCH & RESOURCES

February 22nd Is Heart Valve Disease Awareness Day

Even though as many as 11 million Americans are affected by heart valve disease, public awareness of the disease is shockingly low. The seriousness of the disease, combined with the fact that symptoms are often difficult to detect or dismissed as a normal part of aging, makes this lack of awareness dangerous. While heart valve disease can be disabling and deadly, it can usually be successfully treated in patients of all ages if treated in time, making education and awareness particularly important.

The Heart Valve Disease Awareness Day campaign takes place every February 22nd during American Heart Month. The goal of this initiative is to provide allies and partners with easy-to-understand messages that can easily be incorporated into outreach efforts. It includes social media graphics, videos, magazine inserts and other tools to enable others to spread the word about valve disease.

To learn more about raising awareness of Heart Valve Disease Awareness Day, click the red button below.

How Family Caregivers Can Help When Personal Hygiene Is a Problem

Pamela Toto's 102-year-old client had a problem: She was able to live alone, with help from her son, but getting in and out of her shower, where she had a chair and a handheld nozzle, was too difficult.

So, Toto, an occupational therapist, showed the son how to safely help his mother into her shower chair.

But, Toto says, "they didn't do it." She learned why in a talk with the son: "He said, 'I do everything for my mom, but I just don't want to see her naked.'" Toto helped the pair find a solution: a wrap-around towel robe the woman already had that she could wear on the way into and out of the shower.

It was a good illustration, Toto says, of the challenges, both practical and emotional, that caregivers and care recipients face when someone needs help with showering, using the toilet or other intimate hygiene tasks.

[LEARN MORE](#)

How Caregivers Can Counter Family Gaslighting

Intentionally misleading someone to believe something that isn't true is often called gaslighting, named for the Alfred Hitchcock–directed 1944 movie *Gaslight*, in which a devious husband uses trickery and deception to manipulate his gullible wife into thinking she's losing her mind. The term has become part of common parlance in our polarized age of decreased trust in institutions and one another.

People may feel gaslit by friends who are warm and supportive to their faces but bad-mouth them behind their backs; when caught, the gaslighter will say the person is crazy that they thought the comments were about them. An employee may complain of being gaslit by a boss who promises an increased bonus for working longer hours and then reneges, denying having made such a claim. And caregivers may feel gaslit by other family members who deliberately twist the truth about a care receiver's needs or the caregiver's responsibilities, to increase that caregiver's sense of duty and guilt.

Alzheimer's Tied to Cholesterol, Abnormal Nerve Insulation

The protein apolipoprotein E (APOE) plays a key role throughout the body. It helps to transport cholesterol and other fatty molecules, or lipids. The gene that produces APOE comes in a few different varieties. The most common is called APOE3.

The most notorious is APOE4, which has long been linked to an increased risk of dementia in Alzheimer's disease. People who inherit one copy of the APOE4 gene have up to a fourfold greater risk of developing Alzheimer's disease dementia.

Vascular Dementia: Causes, Symptoms, and Treatments

Vascular dementia refers to changes to memory, thinking, and behavior resulting from conditions that affect the blood vessels in the brain. Cognition and brain function can be significantly affected by the size, location, and number of vascular changes.

People with vascular dementia almost always have abnormalities in the brain that can be seen on MRI scans. These abnormalities can include evidence of prior strokes, which are often small and sometimes without noticeable symptoms. Major strokes can also increase the risk for dementia, but not everyone who has had a stroke will develop dementia.

Grandfamilies and Kinship Support Network: A National Technical Assistance Center

The Grandfamilies & Kinship Support Network is the first-ever national technical assistance center for those who serve grandfamilies and kinship families. The Network exists, free of charge, to offer a new way for government agencies and nonprofit organizations in states, tribes, and territories to collaborate and work across jurisdictional and systemic boundaries—all to improve supports and services for grandfamilies and kinship families. Our work is rooted in cultural competence and linguistically appropriate approaches and is fully accessible to people with disabilities.

The Grandfamilies & Kinship Support Network will create lasting change for families around the country by connecting and supporting:

- Policy and program leaders at government agencies in states, tribes, and territories within aging/elder/senior services, child welfare, disability, education, housing, nutrition, Medicaid and Medicare, and Temporary Assistance for Needy Families (TANF);
- Kinship navigators; and
- Leaders of nonprofit, community-based, and faith-based organizations focused on supporting grandfamilies and kinship families.

[LEARN MORE](#)

What Is Long-Term Care?

Long-term care involves a variety of services designed to meet a person's health or personal care needs during a short or long period of time. These services help people live as independently and safely as possible when they can no longer perform everyday activities on their own.

Long-term care is provided in different places by different caregivers, depending on a person's needs. Most long-term care is provided at home by unpaid family members and friends. It can also be given in a facility such as a nursing home or in the community, for example, in an adult day care center.

Planning for the Future After a Dementia Diagnosis

If you or a loved one has been diagnosed with Alzheimer's disease or a related dementia, it may be difficult to think beyond the day to day. However, taking steps now can help prepare for a smoother tomorrow.

Over time, the symptoms of Alzheimer's and related dementias will make it difficult to think

clearly. Planning as early as possible enables you to make decisions and communicate those decisions to the right people.

How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion. This is best done when there is not an emergency. A calm conversation about what kind of care is wanted and needed now, and what might be needed in the future, can help avoid a lot of confusion.

Decide who will be responsible for which tasks. Many families find the best first step is to name a primary caregiver, even if one is not needed immediately. That way the primary caregiver can step in if there is a crisis.

Agree in advance how each of your efforts can complement one another so that you can be an effective team. Ideally, each of you will be able to take on tasks best suited to your skills or interests.

INSTITUTE FOR HEALTHCARE POLICY AND INNOVATION

NATIONAL POLL ON HEALTHY AGING

UNIVERSITY OF MICHIGAN

Look for the Helpers: Providing Support to Older Adults

People age 50 and above commonly provide health, personal, and other types of care and support to other older adults living with chronic conditions or disabilities. This support is often essential for aging in place and managing chronic conditions. In July 2022, the University of Michigan National Poll on Healthy Aging asked a national sample of U.S.

adults age 50–80 about their experiences helping an adult age 65 or older with health, personal, and other types of care needs.

To learn more about the poll's findings, click the red button below.

Medicaid Structured Family Caregiving: Enabling Family Members to Make Caregiving Their Primary Focus

Family caregivers play an important role in states' efforts to help Medicaid beneficiaries safely remain in their communities. And, as of August 2022, at least seven states (Connecticut, Georgia, Indiana, Louisiana, Missouri, North Carolina, and South Dakota) covered structured family caregiving (SFC) services provided to older adults and/or people with physical disabilities under their Medicaid programs. Coverage of SFC services results in Medicaid payments and other support to family caregivers, usually including spouses and others who are legally responsible for the beneficiary. This brief, which is based on research and interviews with state staff, examines how Georgia, Missouri, and South Dakota are using Medicaid-funded SFC services to help older adults remain in the homes they share with their loved ones.

SFC services consist of a package of services that support home and community-based services (HCBS) waiver participants' primary caregivers and includes payment, individualized training based on the needs of the waiver participant, coaching, back-up or respite care, and other supports. All interviewees emphasized that they valued SFC services because they enabled HCBS waiver participants who do not self-direct services to receive the personal care they need in their homes from people they know and trust.

Georgia and South Dakota offer SFC services to both older adults and people with disabilities enrolled in Medicaid. Missouri, however, offers the services only to Medicaid beneficiaries with Alzheimer's or a related diagnosis. In all three states, Medicaid beneficiaries must be enrolled in an HCBS waiver to qualify for SFC services. As of July 2022, Missouri was providing SFC services to 62 waiver participants, and South Dakota was providing them to 217 participants. Also, all three states administer their SFC services through agencies, which are entities (usually home health providers) that have agreed to provide the services. Interviewees reported that approach enabled their states to implement the service without new staff resources and helped ensure appropriate

oversight of the care delivered to Medicaid beneficiaries.

The COPD Caregiver's Toolkit

Caring for someone with chronic obstructive pulmonary disease (COPD) might be new for you. It is a condition that can be hard to understand and manage. COPD is a group of lung diseases including emphysema and chronic bronchitis, or both — that block airflow in the lungs. This makes breathing difficult for people living with COPD.

Caregivers who feel confident about what to do often provide better care for their loved ones. “The COPD Caregiver’s Toolkit” offers advice on a variety of topics for patients and caregivers, including how to prepare for doctors’ appointments, navigate changes in home life, provide help after a COPD flare-up or hospital stay and stay mentally and physically healthy through it all.

Acceptance & Letting Go

We cannot control everything; we can only control our responses. On our caregiver journey, we often want to assert control over situations in order to show love or support. Sometimes the best way to provide care to our loved ones is to practice radical acceptance and letting things go.

Letting go is hard for everyone at first. Courage to Caregivers has put together some tips and philosophies on acceptance.

Potential Contributor to Sex Differences in Alzheimer's Risk

Alzheimer's disease, which can destroy the ability to think, learn, and remember, is more common in women than men. The reasons for this disparity between the sexes are not well understood.

Women are known to have greater levels of tau protein abnormally build up in brain cells over their lives. The structures that form, called tau tangles, are one of the hallmarks of Alzheimer's disease.

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough.

At first, many older adults pay for care in part with their own money. Initially, family and friends may provide personal care and other services, such as transportation, for free. But as a person's needs increase, paid services may be needed.

Older adults may be eligible for some government health care benefits. Caregivers can help by learning more about possible sources of financial help and assisting older adults in applying for aid as appropriate.

**MAKE YOURSELF
A PRIORITY, TOO**
[TIPS FOR CAREGIVERS]

Taking Care of Yourself: Tips for Caregivers

Being a caregiver can be extremely rewarding, but it can also be overwhelming. It's not uncommon to feel lonely or frustrated with everyone around you, from the care recipient to the doctors. That's why taking care of yourself is one of the most important things you can do as a caregiver. Here are a few things you can do to care for yourself:

- Stay physically active. Try doing yoga or going for a walk.
- Eat healthy foods. Nutritious food can help keep you healthy and give you energy.
- Join a caregiver support group online or in person. Meeting other caregivers will give you a chance to share stories and ideas.

Giving Care: An Approach to a Better Caregiving Landscape in Canada

Unpaid caregivers and paid care providers make up the largest part of Canada's health-care and social supports systems. Research shows that they provide approximately three hours of care for every hour provided through the rest of our systems. They help seniors living in the community or in long-term care settings; children and adults with physical, intellectual, or developmental disabilities; people with medical conditions; people experiencing mental illness; and people with changing support needs related to aging.

On November 7, 2022, the Canadian Centre for Caregiving Excellence released its first policy white paper – *Giving Care: An approach to a better caregiving landscape in*

Canada. The report aims to ignite a public conversation on the state of caregiving and offer potential policy solutions to address the many challenges and systemic issues experienced by Canada's 8+ million caregivers and care providers across the country.

Understanding and Treating Depression

It's normal to feel sad, down, or low at times. But these feelings can sometimes linger. They can get worse, too, eventually making it hard to do basic daily tasks. If you've had a depressed mood or a loss of interest or pleasure in most activities for at least two weeks, you may be experiencing depression.

Depression is a serious disorder. "It's not some-thing that you can just 'push through,' or get through without help," says Dr. Kimberly Young, a mental health researcher at the University of Pittsburgh.

Depression isn't caused by a single thing. Some people's genes put them at risk for depression. Stressful situations may trigger depression. Examples include money problems, the loss of a loved one, or major life changes. Having a serious illness like cancer or heart disease can also lead to depression. And depression can make such illnesses worse.

Long-Distance Caregiving

Anyone, anywhere, can be a long-distance caregiver, no matter your gender, income, age, social status, or employment. If you are living an hour or more away from a person who needs your help, you're probably a long-distance caregiver. This kind of care can take many forms—from helping with money management and arranging for in-home care to providing respite care for a primary caregiver and planning for emergencies.

The U.S. National Institute on Aging provides a number of resources for long-distance carers. To learn more, click the red button below.

Adult Day Care

Adult Day Care Centers are designed to provide care and companionship for older adults who need assistance or supervision during the day. Programs offer relief to family members and caregivers, allowing them to go to work, handle personal business, or just relax while knowing their relative is well cared for and safe.

The goals of the programs are to delay or prevent institutionalization by providing alternative care, to enhance self-esteem, and to encourage socialization. Adult day health care offers intensive health, therapeutic, and social services for individuals with serious medical conditions and those at risk of requiring nursing home care.

Hospital Discharge Planning: A Guide for Families and Caregivers

A trip to the hospital can be an intimidating event for patients and their families. As a caregiver, you are focused completely on your family member or friend's medical care, and so is the hospital staff. You might not be giving much thought to what will happen when your friend or family member leaves the hospital.

Everything about this transition – whether the discharge is to home, a short-term rehabilitation (“rehab”) center, or a residential nursing facility – is critical to the health and well-being of the person you care for. Yet, while it's a significant part of the overall care plan, there is a surprising lack of consistency in both the quality and process of discharge planning across the health care system.

Alzheimer's Disease Research Centers: National Research Centers, Local Resources

The Alzheimer's Disease Research Centers (ADRCs) offer local resources, support, and opportunities to participate in research on Alzheimer's disease and related dementias. These centers are dedicated to developing and testing new ways to detect, diagnose, treat, and prevent dementia and to improving care for people with these diseases and their families. The National Institute on Aging (NIA) at the National Institutes of Health (NIH) funds more than 30 ADRCs at medical institutions across the country. Each center has specific scientific and population areas of focus.

For families affected by Alzheimer's and related dementias, ADRCs offer:

- Help with obtaining diagnosis and managing your care
- Information about the diseases, services, and resources
- Opportunities for volunteers to participate in clinical trials and studies that contribute to improved understanding of dementia, which may lead to new treatments and better care
- Support groups and other special programs for volunteers and their families

MOTIVATE: Marketing and Messaging Palliative Care

The Center to Advance Palliative Care (CAPC) has developed the MOTIVATE toolkit about marketing and messaging palliative care.

Due to low public awareness and consistent misconceptions, how you frame palliative care and its benefits is vitally important. Marketing, supported by sound messaging, helps patients, families, referral sources, and service partners understand the work that you do. Palliative care is about quality of life. When done well, proper messaging and marketing can clarify this and motivate patients, families, and clinicians to take advantage of it.

Use the MOTIVATE toolkit to refine your program's marketing strategy, and your messaging.

To explore the online toolkit, click the red button below.

Just released: 2022 National Strategy to Support Family Caregivers

2022 National Strategy to Support Family Caregivers

The National Alliance for Caregiving – a coalition of 67 national organizations – applauds the release of the 2022 National Strategy to Support Family Caregivers developed by the U.S. Department of Health and Human Services but urges strong accountability and implementation efforts to turn the strategy into action.

The strategy details more than 350 federal actions and 150 measures that state and local governments, public health departments, philanthropies, and community-based, faith-based, and nonprofit organizations can take immediately to support the nation's 53 million family caregivers who make up 21% of the population.

The National Strategy includes potential government actions that address issues that family caregivers say are most important, including:

- 1) **Access to Respite Services**
- 2) **Support with Day-to-Day and Complex Medical Tasks**
- 3) **Inclusion of Caregivers in Care Teams**
- 4) **Financial Education on Caregiving Costs**
- 5) **Better Identification of Family Caregivers**
- 6) **Research on the Needs of Family Caregivers**

NAC was integral to mobilizing the caregiving community in support of the RAISE (Recognize, Assist, Include, Support, and Engage) Act, which established the council and process for developing the 2022 National Strategy to Support Family Caregivers. NAC also worked with The John A. Hartford Foundation and the National Academy for State Health Policy to ensure family caregivers were centered in the development of the recommendations and that the strategy reflected the lived experiences of this diverse community.

We encourage individuals and organizations to **provide public comment** on the National Strategy. The Strategy will be updated biennially, informed in part by public feedback, ensuring it continues to meet the needs of family caregivers and those they care for as they evolve.

Frequently Asked Questions About Palliative Care

Palliative care is specialized medical care for people living with a serious illness. Palliative care can be received at the same time as your treatment for your disease or condition. It focuses on providing relief from the symptoms and stress of serious illness. The palliative care team works to prevent or ease suffering, improve quality of life for both the patient and their family, and help patients and their families make difficult health care decisions. When a patient decides to forgo treatment for their serious illness or is near the end of life, they may decide to enter hospice care.
