The Caregiving Conundrum: How Unpaid Caregiving Impacts Retirement Readiness

Unpaid caregivers serve a vital function in taking care of a family member or close relative, but new research published by the Employee Benefit Research Institute (EBRI) finds that it can take a toll on retirement preparedness.

Based on findings from the 33rd annual Retirement Confidence Survey (RCS) conducted jointly by EBRI and Greenwald Research, the report finds that caregivers are more likely to have lower levels of assets and more likely to have problems with debt than non-caregivers.

"Hospital-at-Home' Trend Means Family Members Must Be Caregivers -- Ready or Not

For the past four years, Chad Semling has coped with serious illness, including chronic infections, a weakened liver and a damaged heart. He became a regular visitor at his local hospital in Eau Claire, Wisconsin, where he and his wife, Clare Semling, got to know the downsides of hospital care a little too well: The isolation. Poor sleep, interrupted by bells and alarms. The food.

In the spring of 2020, Chad was back at the Eau Claire Mayo Clinic emergency department for a flareup of cellulitis, a skin infection that can be serious. He was dreading yet another hospital stay.

Be an Effective Caregiver No Matter Where You Are

Caregiving looks different to everyone. Some folks need help managing finances; some need supervision with their medications. Still, others will require in-home health care arrangements or help to navigate the confusion of insurance claims and benefits.

According to Shane Burley, a freelance writer from Portland, Oregon, Susan Enguidanos, Ph.D. and Melissa O'Connor, Ph.D., for many older adults, caregiving is a difficult word and a topic not easy to discuss. There are ways to shift (or start) this conversation and establish good caregiving practices.
Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups

The National Alliance for Caregiving (NAC) has released a new publication to assist patient advocacy groups in their efforts to support diverse family caregivers. Through research with professional patient advocacy group representatives and diverse family caregivers in the condition areas of lung cancer, heart disease, blood cancer and lupus, *Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups* addresses the impact of culture and identity on the way that family caregivers provide care, and introduces ways in which patient advocacy groups can support their caregiving experience through culturally responsive resources and supports. The number of diverse family caregivers in the United States is growing yearly, and their aggregate number will soon surpass non-Hispanic white, non-LGBTQ+ caregivers. This guide was created with support from AstraZeneca.

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. \textit{Assessing the Pain of Care Recipients: Tools Available to Family Caregivers} utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

\textbf{JUST RELEASED!}

\textbf{Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health}

\textbf{DOWNLOAD NOW}

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America’s 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it’s needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC’s report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

To read the report and access our findings, click the red button below.

**Successful Public Health Approaches in Dementia Caregiving: Vermont**

A Virtual Roundtable Series

In each episode of this virtual roundtable series we highlight the story of one state that has successfully implemented a state-wide, innovative, and integrative approach to advancing its dementia caregiving goals. Attendees can learn about other states’ efforts in dementia caregiving and get ideas for action in their states and communities. This series offers a great opportunity for knowledge exchange, peer-learning and idea generation.

In this episode, we will present the story of Vermont.

**July 26th, 2023 | 11:00am-12:30pmET | Zoom**

Register at the following link or scan the QR code:

---

*Lori McKenna, LICSW*

Mental Health Clinician/Geriatric Clinical Social Worker

University of Vermont Medical Center

Assistant Director, Frederik C. Brinton Center for Parkinson's Disease and Movement Disorders Coordinator, CARERS/TEACH VT

*Jeanne Hutchins, MA*

Executive Director, Lamer College of Medicine, Center on Aging

Manager, Dementia Family Caregiver Center, University of Vermont Medical Center

*Lucas Kovacevich, MAT, MSW*

Program Administrator, VT-BRIDGES

*Audrey Winograd, JD, MSW*

Medical Social Worker and Psychotherapist

Program Coordinator, VT-BRIDGES Member, CARERS Dementia Caregiver Team

*Janet Nunziata, MS*

Associate Director for Education, Center for Aging

University of Vermont VT-BRIDGES and Grand Friends Program

*Allegra Miller, M. Ed*

Family Caregiver Volunteer Co-creator and Co-creator

UXVMHC Peer-to-Peer Mentoring Program
Join the Public Health Center of Excellence on Dementia Caregiving (PHCOE-DC) on July 26th for the Vermont episode of the "Successful Public Health Approaches in Dementia Caregiving" series. Attendees will hear from a variety of panelists with perspectives of those involved with the Vermont BOLD Program, Vermont Center on Aging, University of Vermont Medical Center, Vermont Dementia Family Caregiver Center, Vermont BRIDGES Program, and family caregivers.

This is the fifth event of a bi-monthly, roundtable series showcasing innovative, state-wide public health approaches for supporting dementia caregivers. The goal of this series is to create a public health community of practice, where agencies can share experiences and lessons learned, and find ideas of strategies they can implement to support dementia caregivers in their jurisdictions.

Joint Meeting to Kick Off Second Terms of RAISE Family Caregiving Advisory Council & Advisory Council to Support Grandparents Raising Grandchildren

**July 27, 2023 | 2:00 PM - 4:00 PM ET | Online**

Please join the Administrative for Community Living on July 27th for the virtual kick-off meeting of the new RAISE Family Caregiving Advisory Council and the Advisory Council to Support Grandparents Raising Grandchildren.
The centerpiece of the joint meeting will be the introduction and swearing-in of new council members as they start their three-year terms. You’ll also hear from federal leaders and partners about the way forward for the work of the councils, a preview of the next joint advisory council meeting (September 19, 2023), and more.

Registration is not required to attend. The public meeting access link will be operational (live) 5 minutes prior to the meeting start time. ASL and closed captioning will be available during the meeting.

All information for this meeting, including an agenda, will be posted on the RAISE and SGRG webpages in advance of the meeting. Contact RAISE.mail@acl.hhs.gov with any questions.

To register learn more, click the red button below.

AUGUST
A Plan for You After Your Family Member's Diagnosis

August 1, 2023 | 1:00 PM - 2:00 PM ET | Online

It's not a holiday, Diagnosis Day, but it's a day that's so momentous for all the wrong reasons that it becomes etched in our memories. The world looks the same but a diagnosis changes how the world feels. It all feels so strange.

How do you manage after a family member's diagnosis?

Join Denise Brown on August 1st for a discussion of how to proceed once a diagnosis has been made.

To register for this event, click the red button below.

REGISTER

>
Spousal Caregiving

August 2, 2023 | 1:00 PM - 2:00 PM ET | Online

Among the tens of millions of family caregivers, about 12% of them are caring for an ill or disabled spouse or partner. Elements of caring for a spouse or partner differ from other types of caregiving relationships. On average, spousal caregivers provide more hours of caregiving, do more intense care-related tasks and do it all with less assistance compared to other types of caregivers. Professionals who understand the nuances of spousal caregiving can be better positioned to help these individuals.

Join the American Society on Aging on August 2nd for a presentation on spousal caregiving.

Participants in this webinar will be able to:

- Learn about the prevalence and characteristics of spousal caregivers
- Understand the challenges unique to spousal caregivers
- Discover support and resources for spousal caregivers

To register for this event, click the red button below.

Comfort for Caregivers; Strategies for Dealing with Caregiver Stress

August 7, 2023 | 12:00 PM - 1:00 PM ET | Online

Caring for a loved one strains even the most resilient people. In this workshop, we will discuss strategies for dealing with caregiver stress and learn effective ways to preserve your own health and well-being. There will be time for Q&A following the presentation.

To register for this event, click the red button below.
Washing, Dressing, and Personal Care

August 8, 2023 | 8:30 AM - 10:00 AM ET | Online

Join the UK's Dementia Carers Count on August 8th for a webinar about the difficulties with washing and dressing a person with dementia can face and how you can support them.

The session is for you if you would like to …

- Explore the different needs an individual has in personal care activities
- Consider strategies that will support positive personal care interactions
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment
- Meet other people who are taking care of a friend or family member with dementia who maybe having similar experiences

Plan Your Respite In Place Space

August 8, 2023 | 1:00 PM - 2:00 PM ET | Online

When you care for a family member, you may find it difficult to get a break. You may struggle to find and hire help. You may need to be close by because of a caree's complex care needs. You may not have family members who can help.
When you can't leave, we'll help you get a break right where you are. We'll help you create a Respite In Place plan so you can create a space to call your own in your home, your yard and your community.

Before joining us:

- Take our one-minute pre-event survey;
- Download our Respite In Place Plan to use during our 50-minute session.

Denise M. Brown, who helps her parents, will lead the discussion. Denise began supporting those who care for a family member in 1990.

To register for this event, click the red button below.

Virtual Family Caregiver Workshop

August 11, 2023 | 9:00 AM - 12:00 PM ET | Online

Communication is more than just talking and listening – it’s also about sending and receiving messages through attitude, tone of voice, facial expressions and body language. As people with Alzheimer’s disease and other dementias progress in their journey and the ability to use words is lost, families need new ways to connect.

Join the Alzheimer's Association on August 11th to explore how communication takes place when someone has Alzheimer’s, learn to decode the verbal and behavioral messages delivered by someone with dementia, and identify strategies to help you connect and communicate at each stage of the disease. The Effective Communication Strategies program of the Alzheimer’s Association was designed to provide practical information and resources to help dementia caregivers learn to decode verbal and behavioral messages from people with dementia.

To register for this event, click the red button below.

Planning for Getting Paid for Caring for a Family Member
The direct care workforce shortage means many families simply can’t find a direct care worker to hire. More and more families may use the caregiving budget to reimburse a family member for providing care. With a new planning tool provided by The Caregiving Years Training Academy, families can create plans to hire a family member and be empowered to have effective conversations with a financial planner and elder law attorney to ensure that they created the right solution for their family.

Join Denise Brown for a 50-minute meeting to explore the possibility of paying a family member (including yourself) for providing care.

Before joining us:

· Download our Paying for Care Planning Tool to use during our 50-minute session.

Denise began helping family caregivers in 1990 and launched one of the first online caregiving communities in 1996. She managed the community until its sale in March 2020 in order to focus on her training and development programs. Denise began helping her father in 2004 after his bladder cancer diagnosis. She also helped care for her mother for seven years until her death in August 2022.

To register for this event, click the red button below.

Meaningful Engagement and Enjoyment for Families Impacted by Dementia

August 14, 2023 | 6:00 PM - 8:00 PM ET | Online

Learn about connect2culture®, CaringKind’s program that connects families to cultural organizations that develop programs specifically created for people living with dementia and their care partners.

Meredith Wong, Director of connect2culture, will speak about some of connect2culture’s partner programs.

To register for this event, click the red button below.
Create a Plan for Recovery During Caregiving

August 15, 2023 | 1:00 PM - 2:00 PM ET | Online

After an intense period, like a hospitalization or decline, you and your caree deserve a Recovery Plan. The plan gives you a period of time after the crisis for your mind, body and spirit to recover. In addition, you can plan for how your caree will recover by considering a new routine and adding help.

Tune in on August 15th for a webinar featuring Denise Brown that will discuss how to come up with a Recovery Plan for carers and carees.

To register for this event, click the red button below.

Useful Technology for Caregivers

August 15, 2023 | 7:00 PM - 8:00 PM ET | Online

As a caregiver, technology can make your life so much easier! There are so many useful gadgets and tools out there that can help you with everything from keeping track of medication schedules to monitoring your loved one's safety. With the help of these tools, caregivers can better care for their loved ones while still maintaining their own well-being. So don't be afraid to try out some of these useful technologies and see how they can benefit you and your loved one!

Join Willing Hearts, Helpful Hands on August 15th for a discussion of the ways that technology can assist caregivers taking care of a loved one.

A Zoom meeting ID and password will be emailed to all participants 15 minutes prior to the start of the event.

To register for this event, click the red button below.

Rethinking Carer Empowerment and Resilience

August 15, 2023 | 8:30 PM - 10:30 PM ET | Online

Tune in on August 15th for a free, two-hour interactive webinar that will feature emerging evidence and discussion on the terms empowerment and resilience as they relate to caregiving. This webinar will explore these contentious terms, with the aim of moving towards a more constructive framework for operating.

Designed for a wide audience, evidence presented will include research findings, evidence-based practice, and the lived experience of caring.

The webinar will be interactive and enable participants to share their own ideas and experiences on the topic of carer empowerment as it relates to their identity as a carer and their overall health and wellbeing.

About the Carer Knowledge Exchange

The Carer Knowledge Exchange is a partnership project delivered by Carers NSW and the Institute for Public Policy and Governance (IPPG) at the University of Technology Sydney, proudly funded by the NSW Government.

The Exchange brings together carers, researchers, students, decision makers, professionals and service providers to share their knowledge about carers and learn from each other with the aim to improve outcomes for carers across Australia by connecting research to practice.

This interactive webinar is for anyone with an interest in connecting carer-related research to practice, including carers and former carers; academic and not-for-profit researchers; research students; policy makers and practitioners; and people who receive care.

To register for this event, click the red button below.

Taking Care of Yourself

August 16, 2023 | 8:30 AM - 10:00 AM ET | Online

If you care for someone with dementia, this is your chance to consider your own wellbeing and develop some tools and skills to help you.
“Resilience is the way we cope with stress and adversity in life. By learning new ways of thinking, behaving and interacting with others, we develop ways to cope even when life is tough.”

Put another way, resilience is building the ability to make choices when we are under pressure.

Our instincts are designed to protect us and can take over and make decisions for us, but this isn’t always helpful. Resilience gives us the awareness to notice this and the ability to choose how to act rather than a knee jerk reaction.

There are a number of ways we can build resilience that we will discuss in this session.

Join the UK’s Dementia Carers Count on August 16th for a discussion about how caregivers can take care of themselves while caring for another. This session is for you if you would like to:

- Learn about how resilience can be built to support your well being
- Gain ideas and strategies to support your own wellbeing
- Spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

To register for this event, click the red button below.

Does When I Eat Matter? -- Understanding Intermittent Fasting

August 16, 2023 | 12:00 PM - 1:00 PM ET | Online

Intermittent fasting/ time-restricted eating. There has been quite a bit of discussion surrounding the optimal times to consume meals and the benefits of resting our digestive systems. Does this have any merit? What does it mean for our longevity, brain health, and overall wellness?

ABOUT OUR SPEAKER: Brian Browne MS CSA

Brian Browne is the president of Dementia Care Education, founder of Neuro-Nutrition®, and a research consultant to the Cleveland Clinic. Brian is a cognitive scientist and neuro-
nutritionist and possesses over 20 years of expertise in the fields of aging, dementia, clinical research, and nutrition. He is a noted public speaker and a frequent lecturer at meetings and conferences regionally and nationally. Brian has been featured by many media outlets and produces regular expert content for various publications. His research interests include examining the role of nutrition and gut health to promote cognitive performance, successful aging, and reduce the risks of cognitive decline and neurodegenerative diseases.

Tips for Caregivers to Safely Assist with Mobility and Navigate Change

August 17, 2023 | 12:00 PM - 1:00 PM ET | Online

Does your care recipient need help getting up from a chair or transitioning from place to place? Is this task new and difficult for you? Is this something that you may be struggling with? Sometimes moving and providing physical support to your care recipient can be challenging. Caregivers may not realize that they can risk their own physical health while doing their best to negotiate these new tasks.

Join the Ontario Caregiver Organization on August 17th to learn more about:

• Acknowledging the emotional challenges that accompany this part of the role
• Tips for moving your care recipient safely
• A discussion on in-home safety devices that could support you
• Lived caregivers’ experiences

Who should attend this event? Caregivers who want to learn more about safe moving and handling of care recipients.

Our speaker: Taryn Bolt is a Community Education Program Lead and registered Occupational Therapist at the Mississauga Halton Regional Learning Centre. Taryn brings over a decade of educational and clinical experience in community healthcare to her current role.

To register for this event, click the red button below.

REGISTER
Dementia and Hospice

August 21, 2023 | 12:00 PM - 1:00 PM ET | Online

Join HopeHealth Hospice & Palliative Care on August 21st for an online program that will provide participants with a focused look at Medicare hospice guidelines when the terminal diagnosis is a form of dementia. This presentation will discuss the qualifying criteria as well as contributing factors that lead to eligibility for hospice care.

To register for this event, click the red button below.

Relationships, Family, and Mental Health

August 23, 2023 | 11:00 AM - 12:00 PM ET | Online

The complicated nature of mental illnesses can make relationships challenging, and caregiver stress — the emotional and physical stress of caregiving — is common. Learn strategies to set boundaries, respond to difficult behavior, and manage your own stress in this one-hour webinar with a licensed therapist.

Fine print: Certificates of attendance are provided at no cost. CEUs are not provided.
Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.

About the instructor: Jaymi Dormaier is a Licensed Master Social Worker with ten years of experience in the mental health field. In Jaymi's career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction. She is passionate about helping others live a life they love.

To register for this event, click the red button below.

Coping with Emotions of Caregiving

August 23, 2023 | 9:00 PM - 10:00 PM ET | Online

Caring for others is filled with many mixed and varied emotions such as feelings of love, loss, anger, affection, sadness, frustration, and guilt. It’s not uncommon for family caregivers to feel lonely and isolated. It takes a lot of physical, mental, spiritual, and emotional energy to care for a loved one. Caregivers often experience a higher rate of stress, anxiety, and depression than those who aren’t caregivers.

Join the Family Caregiver Alliance on August 23rd for a class that will explore these emotions and learn about ways to help cope and manage them.

To register for this event, click the red button below.

Understanding and Responding to Dementia-Related Behavior

August 24, 2023 | 1:00 PM - 2:00 PM ET | Online

Behavior is a powerful form of communication and is one of the primary ways for people with dementia to communicate their needs and feelings as the ability to use language is lost. However, some behaviors can present real challenges for caregivers to manage. Join the Alzheimer's Association on August 24th to learn to decode behavioral messages, identify common behavior triggers, and learn strategies to help intervene with some of the most common behavioral challenges of Alzheimer’s disease.

To register for this event, click the red button below.
CONFIDENCE Financial Education Program

Thursdays, August 24, - September 21, 2023 | 5:00 PM - 7:00 PM ET | Online

Join the University of Southern California Family Caregiver Support Program for a virtual program designed to help Latino and Hispanic family caregivers to persons living with Alzheimer's disease or a related dementia lower the out-of-pocket costs of caregiving. Over 5 weeks, caregivers will meet virtually and gather in group sessions led by trained facilitators to discuss: how to navigate community resources, strategies for seeking help, how to balance employment and caregiving, and more!

To register for this event, click the red button below.

Release a Worry with a Family Emergency Plan

August 25, 2023 | 1:00 PM - 2:00 PM ET | Online
When you care for a family member, making plans can feel impossible. Even worse, making back-up plans feels completely out of the question. Consider two stats:

- 49% of survey respondents say they receive no help from family members.
- 74% say they do not have a back-up or a trained back-up to provide care in their absence if they become ill, have an emergency or want to take a vacation.

With the direct care workforce shortage, planning becomes even more important.

Join The Caregiving Years Training Academy on August 25th for a 50-minute planning session to create the plans you need to connect with Denise M. Brown, who has been supporting those who care for 30 years and Certified Caregiving Consultants (CCC).

The agenda for this webinar includes:

- 15-minute overview with Denise Brown
- Small group discussions with a CCC
- Wrap-up

To register for this event, click the red button below.

**Virtual Ask the Expert: Estate Planning, Probate or Long Term Care Planning**

*August 29, 2023 | 2:00 PM - 3:00 PM ET | Online*

Do you have questions about estate planning, probate or long term care planning? Maybe you’ve wondered if estate planning is only for the very wealthy?

Join the Alzheimer’s Association on August 29th to learn tips for managing someone else’s finances, how to prepare for future care costs and the benefits of early planning. This event will feature Nick Maggard, an estate planning and elder law attorney.

*Please note that Nick cannot provide legal advice but informational guidance only. You can submit your questions when registering, but we can't guarantee that every one will be answered. A second program will be in November. This will not be recorded.*

To register for this event, click the red button below.
Care Essentials for Care Partners Workshops

Tuesdays, September 5 - September 26, 2023 | 6:30 PM - 8:30 PM ET | Online

Join the Alzheimer Society of Durham Region (Canada) on September 5th for a four-part series that will provide family and friends of persons living with dementia an opportunity to explore approaches to care in an interactive and supportive atmosphere. Each session features a workbook and helpful resources.

Week 1: Care Essentials: What to Expect (September 5th)
First in our four-part series, this session will provide an overview of the progression and symptoms of dementia and discuss how you can support remaining abilities for the person living with dementia.

Week 2: Care Essentials: Communicating Effectively (September 12th)
Second in our four-part series, this session explores communication changes in dementia and strategies for effective communication.

Week 3: Care Essentials: Responding to Behaviour (September 19th)
Third in our four-part series, this session will explore whole person care, behavior changes and how to use problem solving solutions in your caregiving journey.

Week 4: Care Essentials: Supporting Daily Activities (September 26th)
Fourth in our four-part series, this session will help care partners explore meaningful activities, ways to support daily living and will discuss local resources available.

This session will be hosted on Zoom (with a phone in options)

Zoom session: Once you have registered for the session, you will receive a link with instructions on how to connect.

To register for this event, click the red button below.

Driving Safety for Older Adults

September 6, 2023 | 1:00 PM - 2:00 PM ET | Online

The topic of driving is often one that involves a lot of emotions. For many, driving equates to independence and the freedom to go when and where you want. As a person ages, it can be helpful to openly communicate about driving abilities and safety, rather than doing so due to a crisis such as a crash or a “close call.” Families often turn to professionals for
guidance and insights on how to talk about driving and the best approach to taking away the keys.

Join the American Society on Aging on September 6th for a webinar to learn about the importance of developing a plan to help older adults move out of the driver’s seat when necessary, while still remaining engaged with friends, family and community.

Participants in this webinar will be able to:

- Identify potential signs an older adult might be an unsafe driver
- Understand some common conditions and aging-related diseases that can affect driving
- Learn the best approaches to develop a plan to transition out of driving before a crisis occurs
- Discover tips to help reduce the potential for isolation and depression after an older adult stops driving

To register for this event, click the red button below.

To register for this event, click the red button below.

Tools and Tips for Caregivers

September 13, 2023 | 7:00 PM - 8:00 PM ET | Online

Between aging, the impacts of long COVID, accidents, and a myriad of other causes, the need for a caregiver can arise at any moment.

Join Westchester Community Foundation executive director Laura Rossi in conversation with Moira Laidlaw, Esq., of Hollis Laidlaw & Simon, P.C. and Michael Picon, author of The Caregiver’s Notebook, to learn more about the ins-and-outs of caregiving for a loved one. You’ll gain an understanding of the scope of caregiving and resources available, learn about healthcare and legal systems that caregivers navigate, and receive practical tools to decrease stress and get support.

This event is open to the general public and is ideal for family and chosen family members currently, or interested in, supporting others.
Surviving and Thriving: Pancreatic Cancer and Caregiver Workshop

September 22, 2023 | 10:30 AM - 5:00 PM ET | Online

Join the Siteman Cancer Center and the Cancer Support Community of Greater St. Louis on September 22nd for a Pancreatic Cancer Patient and Caregiver Workshop. This free education and support workshop is open to pancreatic cancer patients, survivors, and their primary caregivers.

Participants will learn how to positively impact the survivorship experience after a pancreatic cancer diagnosis.

To register for this event, click the red button below.

---

PATIENT AND CAREGIVER STUDIES

Home-Based Brain Stimulation for Cognitive and Movement Dysfunction in Dementia

Who is sponsoring this study? Hebrew SeniorLife
Where is this study located? Massachusetts

Start: Jan. 24, 2023
End: August 2027
Enrollment: 144

What is this study about?

This study will evaluate the effectiveness of a noninvasive brain stimulation therapy to improve memory, mobility, and daily functioning in older adults with mild cognitive impairment or early-stage dementia. The therapy uses transcranial alternating current stimulation (tACS) and transcranial direct current stimulation (tDCS) to target different areas of the brain. Caregivers or study partners will be trained to deliver the home-based therapy. Participants with cognitive decline will be randomly assigned to receive either the tACS or tDCS therapy alone, in combination, or a sham control. There will be a total of 20 at-home sessions, for 30 minutes a day, over four weeks. All participants will complete...
cognition and movement tests at the start of the study, and after one, three, and six months. They will also undergo an MRI brain scan at the start of the study and after the last treatment. Researchers will measure changes in memory, attention, thinking, mobility, daily functioning, brain activity, and health-related quality of life.

**Do I Qualify To Participate in This Study?**

Minimum Age: 55 Years  
Maximum Age: N/A

**Must have:**

Participants with MCI or early-stage dementia:
- Ability to read, write, and communicate in English
- Ability to identify an eligible study partner

Study Partners:
- At least 21 years of age
- Ability to read, write, and communicate in English
- Comfortable using a computer
- Ability and willingness to learn how to administer the brain stimulation program for the study participant with dementia
- Available during weekdays to administer the brain stimulation program

**Must NOT have:**

Participants with MCI or early-stage dementia:
- Moderate or advanced dementia with a Montreal Cognitive Assessment score < 18
- Major psychiatric disorder, including major depressive disorder, schizophrenia, or psychosis
- Blindness or other disabilities that would prevent the completion of study tasks
- Any condition that could make using the brain stimulation technology unsafe, including:
  - Seizure within the past two years
  - Use of any drugs that affect the nervous system
  - Presence of specific, implanted medical devices (e.g., deep brain stimulator, medication infusion pump, cochlear implant)
  - Any active skin condition on the scalp, such as eczema
- Unable to understand the purpose of the study, risks of study participation, and ability to withdraw, based on review of the informed consent form at study screening

Study partners:
- Mild cognitive impairment with a MoCA score < 26, at study screening
- Poor eyesight, severe arthritis in the hands, pain, deformity, or other condition that would interfere with successful administration of the brain stimulation therapy
- Insufficient understanding of study procedures, including the purpose of the study, risks of study participation, and ability to withdraw, based on review of informed consent form at study screening

**Learning from Friends and Family**

**Who Helped with Dementia Care**

**Who is sponsoring this study?** Arizona State University

**Where is this study located?** Arizona

Start: March 15, 2023
What Is This Study About?

This study is gathering information from former dementia caregivers to develop guidance to help others meet their needs after the death of a friend or family member due to dementia. Participants will be interviewed by phone, for one hour, to answer questions about their caregiving experiences and current life. This information will help researchers develop strategies that can support other dementia caregivers during and after the dementia caregiving process.

Do I qualify to participate in this study?

Minimum Age: 18
Maximum Age: None

Must have:

- Former caregivers for a person with dementia who has died
- Speak English
- Able to have a conversation using a telephone

Must NOT have:

- None

To learn more or participate in this study, click the red button below.

Online Therapy for Depressed Caregivers of a Family Member with Dementia

Who is sponsoring this study? University of Alabama at Birmingham

Where is this study located? Alabama

Start: March 21, 2022
End: January 2025
Enrollment: 64

What is this study about?

This study will examine the effects of an online acceptance and commitment therapy (ACT) program on the mental health of depressed caregivers of a family member with dementia. Participants will be randomly assigned to receive psychological education materials with or without individual ACT sessions guided by a trained coach, using videoconferencing, for one hour a week over 10 weeks. At the start and end of the study, and in a three-month follow-up, participants will answer questions about their mental health and quality of life.

Do I qualify to participate in this study?

Minimum Age: 18 Years
Maximum Age: N/A
Must have:

- Living at home in the community (i.e., not living in assisted living or nursing facility)
- Currently have the primary responsibility for the care of a relative with dementia who is also living in the community (i.e., not living in assisted living, memory care, or nursing facility)
- Diagnosis of at least mild depression, based on study screening evaluation
- Access to a computer or a smartphone with internet access at home

Must NOT have:

- Cognitive, physical, or significant hearing or sight problems that could interfere with study participation
- Unable to communicate in English
- Psychiatric hospitalization or mental illness diagnoses in the previous two years
- Currently taking antipsychotic or anticonvulsant medication
- Plans for the person living with dementia to move to a nursing home within six months
- Medical conditions (caregiver and person with dementia) that may interfere with completion of the study, based on evaluation of the study investigator

At-Home Smell Test To Assess Brain Health

Who is sponsoring this study? Massachusetts General Hospital

Where is this study located? Massachusetts

Start: May 9, 2023
End: June 2024
Enrollment: 250

What is this study about?

This study will evaluate whether an at-home smell test, named AROMHA, can identify older adults with a cognitive decline disorder or disease, such as early-stage Alzheimer’s. Participants with normal cognition, self-reported memory concerns, mild cognitive impairment, or mild behavioral impairment will first be screened by phone and a Zoom video interview. A set of cards with different odors will be mailed to the participants. To take the test, participants will peel and sniff labels on the physical smell cards and use an online application to answer questions related to odor identification, intensity, and discrimination. Participants will not be provided with the results of the tests.

Do I qualify to participate in this study?

Minimum Age: 18 Years
Maximum Age: 100 Years

Must have:

- Participants must fall into one of the following categories, as confirmed by a diagnosis or study screening evaluation:
  - Cognitive concerns, as reported by the participant
  - Mild cognitive impairment
  - Mild behavioral impairment
Normal cognition

Must NOT have:

• Diagnosis of a lung disease (e.g., severe emphysema, asthma) that is not under good medical control
• Current sinusitis, common cold, upper respiratory infection, or nasal polyps
• Alcohol or substance dependence within the past six months; a prior history of alcohol or substance abuse will not exclude study participation
• Currently pregnant
• Severe cognitive dysfunction that would impair the ability to complete the study smell tests
• Adverse reaction to fragrances (i.e., smells trigger a severe asthmatic attack or nausea)

To learn more or participate in this study, click the red button below.

**Dose Response Study of Simufilam for Mild-to-Moderate Alzheimer's Disease (REFOCUS-ALZ)**

Start: November 18, 2021  
End: June 2024  
Enrollment: 1083

**Who is sponsoring this study?** Cassava Sciences, Inc.

**Where is this study located?** Multiple states

**What is this study about?**

This Phase 3 clinical trial, named REFOCUS-ALZ, will test the safety and effects of different dosing levels of the experimental drug simufilam designed to slow cognitive and functional decline in older adults with mild-to-moderate Alzheimer's disease. All participants will be randomly assigned to receive either 50 mg or 100 mg tablets of simufilam or a placebo, twice daily for 76 weeks. Participants will attend clinic visits for evaluation four weeks after the start of the study, and then every three months until the end of the study. Testing will include neurological exams, laboratory tests, electrocardiograms, questionnaires, and interviews. Some study locations may also analyze blood samples or cerebral spinal fluid (optional) to measure the levels of proteins associated with Alzheimer's disease. In addition, some locations may also collect brain scans, using MRI or PET imaging. Researchers will monitor all participants for safety throughout the study and measure changes in cognitive function and mobility.

**Do I qualify to participate in this study?**

Minimum Age: 50 Years  
Maximum Age: 87 Years

**Must have:**

• Diagnosis of mild or moderate Alzheimer's disease
• Mini-Mental State Exam score of 16 to 27
• Clinical Dementia Rating Global Score of 0.5, 1, or 2
• Evidence of brain changes associated with Alzheimer's disease, based on MRI brain scan or other tests, either before or during study screening
If taking any medications for Alzheimer's disease, the dosage must be stable for at least three months before starting the study
Nonsmoker for at least three years
Availability of a study partner
Fully vaccinated for COVID-19 at least two weeks prior to study start

Must NOT have:

- Any condition, disease, or injury that could significantly contribute to the participants cognitive impairment including:
  - Neurologic condition, other than Alzheimer’s disease
  - Serious head trauma
  - Sleep apnea
- Any current primary psychiatric diagnosis, other than Alzheimer’s disease, which could interfere with cognitive assessment or the ability to complete study procedures
- Geriatric Depression Scale score > 8
- Suicidal ideation during the past three months or suicidal behavior during the past year
- Alcohol or substance use disorder within two years of study screening
- Evidence of vascular disease (i.e., damaged blood vessels) or other signs of disease, based on MRI brain scan
- History of seizure, stroke, or transient ischemic attack in the past two years
- Insufficiently controlled diabetes or high blood pressure
- History or diagnosis of significant cardiac disease
- Body mass index < 18.5 or > 37.5
- Currently taking or previously prescribed aducanumab, lecanemab, or any anti-amyloid monoclonal antibody, more than two doses

To learn more or participate in this study, click the red button below.

AXS-05 for Agitation in People with Alzheimer's Disease

Start: Sept. 6, 2022
End: June 2025
Enrollment: 350

Who is sponsoring this study? Axsome Therapeutics, Inc.

Where is this study located? Multiple states

What is this study about? Multiple states

This Phase 3 clinical trial will evaluate the effectiveness and safety of AXS-05 to reduce agitation in people with Alzheimer's disease. Participants will be randomly assigned to take either AXS-05 or a placebo pill twice a day for five weeks. At the start and end of the study, a study partner will answer questions about the participant's agitation and aggressive behaviors.

Do I qualify to participate in this study?

Minimum Age: 65 Years
Maximum Age: 90 Years

Must have:
Diagnosis of probable Alzheimer's disease
Diagnosis of clinically significant agitation due to probable Alzheimer's

Must NOT have:

- Diagnosis of any dementia other than Alzheimer's
- Unable to comply with study procedures
- Any medical condition that could interfere with the study, based on study screening evaluation

To learn more or participate in this study, click the red button below.

[LEARN MORE]

KarXT for Psychosis in People with Alzheimer's Disease

Start: August 23, 2022
End: April 2025
Enrollment: 380

Who is sponsoring this study? Karuna Therapeutics

Where is this study located? Multiple states

What is this study about?

Many people with Alzheimer's disease experience psychotic symptoms, such as delusions and hallucinations. This Phase 3 trial will test whether the experimental drug KarXT can prevent the relapse of psychosis related to Alzheimer's disease in older adults.

Participants will be randomly assigned to take either KarXT or placebo pills by mouth three times a day for 38 weeks. Throughout the study, researchers will monitor the participants for psychotic symptoms.

Do I qualify to participate in this study?

Minimum Age: 55 Years
Maximum Age: 90 Years

Must have:

- Possible or probable Alzheimer's disease, based on evaluation at study screening with:
  - Mild to severe dementia with Mini-Mental State Examination score of 8 to 22
  - MRI or CT scan of the brain available from the past five years; if not available, a brain scan will be collected during study screening
- History of psychotic symptoms for at least two months before study screening
- Moderate psychosis with:
  - Clinical Global Impressions-Severity score 4
- At least one of the following:
  - Moderate to severe delusions, with a Neuropsychiatric Inventory-Clinician: Delusions score 2 on two of the eight items
  - Moderate to severe hallucinations, with a Neuropsychiatric Inventory-Clinician: Hallucinations score 2 on two of the seven items
- Living at the same home or residential assisted-living facility for at least six weeks before screening
- Able to walk independently with or without an assistive device (e.g., cane, walker)
- Availability of a caregiver who spends approximately 10 hours each week with the
participant and is willing to:
- Attend all study visits and answer questions about participant behavior
- Ensure the participant takes the study drug and completes all other study procedures
- If taking a cholinesterase inhibitor or memantine, dosage must be stable for at least six weeks prior to screening
- Able to visit the clinic in an outpatient setting, follow instructions, and comply with study requirements
- Female participants must not be pregnant or breastfeeding
- Must use at least one highly effective method of contraception during the study and for at least one menstrual cycle (e.g., 30 days) after the last dose of the study drug or placebo, if:
  - Female participant of childbearing potential
  - Male participant whose sexual partners are of childbearing potential
- Male participants must not donate sperm for one month after the final dose of the study drug or placebo
- Body Mass Index within 18 to 40

Must NOT have:

- Psychotic symptoms caused by a current or past condition other than Alzheimer's (e.g., schizophrenia, schizoaffective disorder, delusional disorder, mood disorder with psychotic features)
- History of major depressive episode with psychotic features within one year of screening
- Any serious medical condition that could interfere with the study, including:
  - Cancer, lung, liver, kidney, blood, gastrointestinal, hormonal, immune, skin, or neurological disease
  - History of ischemic stroke within one year of screening or any evidence of hemorrhagic stroke
  - History of cerebral amyloid angiopathy, epilepsy, central nervous system tumor, unstable thyroid function, or unexplained fainting
  - Diagnosis of a serious heart condition, heart attack within six months of screening, personal or family history of arrhythmia, and/or implanted heart defibrillator
  - Positive for HIV (human immunodeficiency virus)
  - History of irritable bowel syndrome or serious constipation requiring treatment within the last six months
- Abnormal result from physical examination, medical history, electrocardiogram, or clinical laboratory results at screening
- Risk of suicidal behavior during the study, based on clinical evaluation
- Urine drug test positive for non-cannabis or non-benzodiazepine substances
- Recent history of any prohibited drug, including:
  - Monoamine oxidase inhibitors, anticonvulsants, lithium, tricyclic antidepressants, or any other psychoactive medications except for as-needed anxiolytics
  - If taking selective serotonin reuptake inhibitors or serotonin norepinephrine reuptake inhibitors, dosage must be stable for at least two months before screening
  - If taking mirtazapine as a hypnotic, must be started at least two months before screening
- Positive COVID-19 test result within two weeks of or at screening
- Previously taken KarXT
- Known allergy to trospium (an ingredient in KarXT)
- Participation in another clinical study with an experimental drug within three months of screening or participation in more than two clinical studies within one year of screening

AVP-786 for Moderate-to-Severe Agitation in People with Alzheimer's Disease

Who is sponsoring this study? Otsuka Pharmaceutical Development & Commercialization, Inc.

Where is this study located? Multiple states

Start: July 8, 2020
End: December 2024
Enrollment: 750

What is this study about?

This Phase 3 clinical trial will evaluate the effects and safety of AVP-786, to treat people with moderate-to-severe agitation due to Alzheimer's disease. AVP-786 is a combination of a drug approved by the FDA as a cough suppressant and a second drug which makes the first last longer in the body. Initially, all participants will undergo a screening evaluation to remove anyone whose agitation symptoms can be reduced without medication. The remaining participants will be randomly assigned to take either AVP-786 or a placebo, by tablet, twice a day for up to 12 weeks. Researchers will monitor participants for any side effects and measure changes in the severity of the agitation, including the types and frequency of behaviors.

Do I qualify to participate in this study?

Minimum Age: 50 Years
Maximum Age: 90 Years

Must have:

- Diagnosis of probable Alzheimer's disease
- Significant, moderate-to-severe agitation that interferes with daily routine for at least two weeks prior to study screening
- Availability of a reliable caregiver who:
  - spends a minimum of two hours each day at least four days a week with the participant
  - is willing and able to comply with all study procedures, including daily administration of the study drug to the participant

Must NOT have:

- Dementia that is due to another condition or disease, other than Alzheimer's disease (e.g., vascular dementia, frontotemporal dementia, Parkinson's disease, substance-induced dementia)
- Agitation symptoms due to another condition or disease, other than Alzheimer's (e.g., secondary to pain, other psychiatric disorder, delirium)
- Agitation symptoms that can be managed without medication
- Clinically significant or unstable condition or diseases that could interfere with the study, including:
  - Malignant cancer
  - Uncontrolled diabetes
  - Uncontrolled high blood pressure
  - Unstable heart, kidney, or liver disease
  - Diagnosis of myasthenia gravis

Stress and Well-Being in the Lives of Caregivers Study

The University of Michigan's SWELCare study focuses on the daily experiences, well-being and cardiovascular health of individuals living with a family member/friend who has dementia.

WHO CAN TAKE PART IN THE STUDY?

Individuals who are Black or White, living with and helping a family member or friend who has Alzheimer's or related dementia and are residents of the state of Michigan.

BENEFITS OF TAKING PART IN THIS STUDY

You are helping to improve our understanding of the impact that the daily activities of family members/friends, who are living with a person with dementia, have on their heart health.

Both participants have the ability to view their heart rates on the study phones. The family member/friend will also be able to view their blood pressure.

WILL I BE PAID FOR PARTICIPATING IN THE STUDY?

YES! The family member/friend and the person living with dementia will receive a combined amount of up to $400 for taking part in the study.

WHAT DOES PARTICIPATION INVOLVE?

Part 1: Baseline Interview
- Family member/friend completes 90-120 minute baseline survey
- Person living with dementia completes a 10-12 minute memory screener

Part 2: Training Session
During this 90-120 minute session the family member/friend learns how to:
- Use 2 heart monitors
- Complete short surveys on a mobile phone
- Assist person living with dementia with wearing one heart monitor

Part 3: Daily Life
During 5 days of daily life the family member/friend
- Wears two heart monitors (one on chest and one on wrist and finger)
- Completes 6 short daily web surveys on a mobile phone
- Completes a short event survey when feeling irritated, hurt, annoyed or stressed

During the same 5 days of daily life the person living with dementia:
- Wears a mini heart monitor on the chest

To participate in this study, click the red button below.
Online Training and Support for Lewy Body Dementia Caregivers

Start: April 21, 2023
End: December 2023
Enrollment: 41

Who is sponsoring this study? University of Washington

Where is this study located? Washington

What is this study about?

This study will evaluate the feasibility and effectiveness of a web-based program, named VOCALE LBD+, to improve caregiving skills and provide support for caregivers of a friend or family member with Lewy body dementia (LBD). Participants will attend online group sessions for eight weeks to join peer support discussions, and receive caregiving education, including the completion of problem-solving exercises. Researchers will measure changes in the caregiver's sense of support, caregiving knowledge, and problem-solving skills after eight weeks and again in a follow-up four weeks later.

Do I qualify to participate in this study?

Minimum Age: 18 Years
Maximum Age: N/A

Must have:

- Informal, unpaid caregiver of a patient with LBD
- Able to read, write, and speak English
- Access to a device that can be used for videoconferencing and/or phone calls

Must NOT have:

- None

IN CASE YOU MISSED IT...

Children, Society's Safety Net: A Youth Caregiving Story | Feylyn Lewis | TEDx Vanderbilt University
Dr. Feylyn Lewis grew up as a youth caregiver for her disabled mother. In 2013, she moved to the United Kingdom to obtain her Ph.D. in Social Work, studying young adult caregivers in the US and UK. Currently, Dr. Lewis is the Assistant Dean of Student Affairs at Vanderbilt University School of Nursing, while also continuing to practice as an independent researcher and consultant. She is a Caregiving.com Champion, representing caregivers in the Nashville area. Dr. Lewis served as the Hunt Research Director at the National Alliance for Caregiving during spring 2021. Dr. Lewis completed a post-doctoral research fellowship at the University of Sussex, where she co-led the United Kingdom research activities of a European Commission-funded research project to investigate the mental health well-being of adolescent young caregivers in the United Kingdom, Switzerland, Slovenia, Italy, the Netherlands, and Sweden. She resides in Nashville where she continues to provide care for her mother.

Detecting Alzheimer's Disease: Older Adults' Experiences with Cognitive Screening & Blood Biomarker Testing

Over six million Americans have Alzheimer’s disease (AD), the most common type of dementia, yet many of these individuals have not been formally diagnosed with the condition. Early detection of AD and related dementias has become an increasingly important public health priority. Cognitive screening (e.g., memory testing) is currently available to facilitate early recognition of cognitive impairment, while blood biomarker tests are an emerging option for detecting the abnormal buildup of proteins in the brain that might be an early sign of AD.
In March 2023, the University of Michigan National Poll on Healthy Aging asked a national sample of adults age 65–80 about their use and awareness of cognitive screening and blood biomarker testing, as well as their perceptions of the tests’ benefits, limitations, and risks.

'There Are So Many Caregivers and a Lot of Fragmented Resources.' These Free Videos May Help

Caregiving can be an overwhelming job, especially for someone with little experience, background or education. Training videos, even just five minutes long, could be a step in the right direction for overcoming some of the challenges associated with the role.

Trualta, a caregiving training company, has teamed up with 32 states to offer hundreds of free videos to caregivers on a multitude of topics: managing prescriptions, adopting self-care rituals and spotting the signs of dementia, to name a few. The company recently rolled out the content in Spanish, in an attempt to help groups of caregivers that can be hard to reach, said Jonathan Davis, founder and chief executive officer of Trualta, which focuses primarily on family caregivers.

Treating Alzheimer's Very Early Offers Better Hope of Slowing Decline, Study Finds

Treating Alzheimer's patients as early as possible -- when symptoms and brain pathology are mildest -- provides a better chance of slowing cognitive decline, a large study of an experimental Alzheimer's drug presented Monday suggests.

The study of 1,736 patients reported that the drug, donanemab, made by Eli Lilly, can modestly slow the progression of memory and thinking problems in early stages of Alzheimer's, and that the slowing was greatest for early-state patients when they had less of a protein that creates tangles in the brain.

Hearing Aids May Cut Risk of Cognitive Decline by Nearly Half

Older adults at greater risk for dementia may be able to protect themselves against cognitive decline by using hearing aids, new research shows.

A study published Monday in the Lancet found that the use of hearing aids can reduce the risk of cognitive decline by about half — 48 percent — for adults with more risk factors for dementia, such as elevated blood pressure, higher rates of diabetes, lower education and income, and those living alone. The study was presented at the Alzheimer’s Association International Conference in Amsterdam.

Duchenne Muscular Dystrophy: A Caregiver’s Guide

People with Duchenne muscular dystrophy (DMD) require some level of caregiving throughout their whole lives, particularly as the disease progresses and patients become less mobile and more reliant on assistive devices. It can feel like a monumental task, but being knowledgeable about the disease and its treatment and management and knowing where to go for support and resources can go a long way in ensuring caregivers are able to give their loved ones the best possible care and help them maintain their quality of life. The following articles can help DMD caregivers educate themselves, figure out next steps, and learn how to take time for themselves.

The Positive Aspects of Dementia Caregiving in Asian Communities

In the United States, Asian Americans represent more than 30 nationalities and ethnic groups, but they are typically categorized as Asian or AAPIs (Asian Americans and Pacific Islanders) for reporting.

Therefore, exploring the positive aspects of caregiving in the context of Asian communities is critical to developing a more robust understanding of dementia caregivers within this population.

According to research published in BMC Geriatrics, positive aspects of caregiving are significant coping resources for informal caregivers of people with dementia (PWD). The study revealed three major themes: positive aspects within the self, positive aspects between caregiver and PWD, and positive aspects between caregiver and others.

The 7 Stages of Dementia: A Guide for Caregivers

Caring for someone with dementia can be a difficult, stressful process and a tough balance. On the one hand, you want to help them maintain as much independence as possible; on the other hand, you want to make sure they’re safe and receive the care they require.

Alzheimer’s disease and other types of dementia are often slow-progressing. It can take years before the symptoms of dementia fully develop and significantly impact the person’s life. It can take even longer until they are no longer able to care for themselves and require full-time services. Fortunately, early detection of dementia symptoms followed by treatment may be able to help slow down the disease’s progression and may help your loved one retain their memory and cognitive abilities longer.

Understanding the Intersection of Alzheimer’s Disease Caregiving and the LGBT Experience

A new study of caregivers of LGBT older adults living with Alzheimer’s disease provides rare insight into the intersection of caregiving and the LGBT experience.

Researchers from Regenstrief Institute and the medical schools of Indiana University and University of Colorado report that many common caregiver experiences — such as feelings of social isolation and of being overwhelmed — are similar for caregivers, whether an individual with Alzheimer’s disease is LGBT or not. However, because LGBT older adults often do not have adult children who can serve as caregivers or may be estranged from their families of origin, provision of the care they need, frequently provided by spouses or partners, is especially challenging.

Study of Indigenous South Americans Supports a Lifestyle 'Sweet Spot' for Aging Brain Health

Brain size typically declines with age, but the severity and prevalence of that decline may be related to lower activity levels, higher food consumption, and other evolutionary changes in lifestyle that are common in industrialized societies. An NIA-funded study of two indigenous South American groups, published in Proceedings of the National Academy of Sciences, supports the idea that there may be a lifestyle "sweet spot" for healthy aging.

The Apartment: A Guide to Creating a Dementia-Friendly Home

Dementia-related illnesses impact the mind and affect virtually every aspect of a person’s life, including making many facets of daily living more difficult. Most residences are not built with the needs of an individual living with Alzheimer’s disease or other dementia-related illnesses in mind. However, almost every part of a residence can impact quality of life for someone living with a dementia-related illness and their family care partners. Even seemingly-cosmetic choices, such as wall colors, furniture patterns, and dishware, make a
Immune Resilience is Key to a Long and Healthy Life

Do you feel as if you or perhaps your family members are constantly coming down with illnesses that drag on longer than they should? Or, maybe you’re one of those lucky people who rarely becomes ill and, if you do, recovers faster than others.

It’s clear that some people generally are more susceptible to infectious illnesses, while others manage to stay healthier or bounce back more quickly, sometimes even into old age. Why is this? A new study from an NIH-supported team has an intriguing answer. The difference, they suggest, may be explained in part by a new measure of immunity they call immune resilience — the ability of the immune system to rapidly launch attacks that defend effectively against infectious invaders and respond appropriately to other types of inflammatory stressors, including aging or other health conditions, and then quickly recover, while keeping potentially damaging inflammation under wraps.

Dementia Warning Signs

It's important to see your primary doctor if you or a loved one are experiencing changes in memory, mood, or behavior. Your physician can identify if you or your loved one is exhibiting any warning signs of dementia.

Having a memory problem does not necessarily mean someone has a dementia-related illness. Medical conditions such as stroke, B12 deficiency, hypothyroidism, depression and infections can cause dementia-like symptoms and are treatable if diagnosed. If the symptoms are caused by dementia, an early diagnosis can allow for the opportunity to connect with support, education, and medical treatments.

How Family Members Can Cope with Sudden Caregiving

Up until that moment when my father’s brain cancer revealed itself, he seemed perfectly fine. A lawyer, devoted father and husband and a former college athlete, he spent his days arguing cases in court, playing baseball with me and my younger brother and swimming miles of laps in a YMCA pool. Then, one fall evening when I was 14, he turned to a neighbor visiting our home to make a comment about a TV show and out of his mouth came a string of gibberish — word fragments and random sounds that made no sense. Cancer cells had infiltrated the language center in his brain. In an instant, he had lost the ability for intelligible speech.

7 Ways to Prevent Someone with Dementia from Getting Lost or Hurt

One of the most common safety concerns for people with dementia is that they will leave the house and get lost. In my 35 years of caregiving and work experience, no one I have encountered who is living with dementia just “wanders” aimlessly. In their minds, there’s a reason: They are looking for something or someone; they believe they should be somewhere (work, home, picking up a child after school, etc.); they want to do something (I once lost an adult day-care client because he wanted to go fishing); they have an unmet need (hungry, thirsty, tired, lonely, etc.); or they are scared. We may not understand what they are thinking or why they are confused — and they may not be able to communicate it.

Tips for Traveling With Dementia

Whether taking a short trip to see friends and family or traveling farther for vacation, it is important to consider the difficulties and benefits of travel for a person with dementia. In the early stages of dementia, a person may still enjoy traveling. As the disease progresses, travel may become too overwhelming. It is imperative to discuss any travel with the individual’s physician to evaluate whether or not travel is recommended or safe.

11 Tips for Getting the Most Out of a Family Meeting

Caring for someone with Alzheimer’s disease or a related illness is a complicated task, and for families requires consensus and vigilance. Family meetings are important to ensure information is shared, formulate care plans, and arrange task divisions with family members. A family meeting is a specific time set aside to promote communication, decision-making, and problem-solving, and to encourage strong family relationships.

Eating and Dementia

A good diet is vital to a person’s health and well-being, but eating with Alzheimer’s or dementia can be difficult. Because the brain is involved in all aspects of eating, when parts of it are damaged by disease, a person can have trouble eating. Some may not want to eat and others may not be able to feed themselves. Some may even forget how to chew and swallow. When a person with dementia can’t eat, they don’t get the nutrition they need to stay healthy, comfortable and strong.

Healthy Brain Initiative: State and Local Road Map for Public Health

Throughout history, public health has had an overwhelmingly positive effect on population wellness. As a result, people are living longer in communities all over the country. But as the size of the U.S. population age 65 and older continues to grow, so too will the number and proportion of Americans living with cognitive decline and dementia. Just as with other chronic conditions, the best way to reduce risk, detect problems early and improve safety and quality of care is to act now.

The Healthy Brain Initiative (HBI) Road Map, updated for 2023-2027, is a framework designed to help public health professionals lead with urgency and act for impact in their communities to improve brain health across the life course and support caregivers.

Beyond the Brain: The Gut Microbiome and Alzheimer's Disease

Trillions of microbes live in our gastrointestinal tract. These different types of bacteria, viruses, fungi, and other microorganisms — collectively known as the gut microbiome — play a vital role in maintaining overall health by helping to digest food and make nutrients. They also support the body’s immune system and produce chemicals that affect brain function. When it gets out of balance, the gut microbiome can contribute to disease.

Changes in the Retina Linked to Stages
Many of the changes to the brain that happen during Alzheimer’s disease may also appear in the retina, according to an NIA-funded study. The findings, published in Acta Neuropathologica, provide important insights on the effects of Alzheimer’s on the retina and suggest that noninvasive methods of monitoring the retina might be a way to reliably detect and track the disease.

Fighting for -- Not With -- Your Loved One's Healthcare Professionals

Family caregivers' relationships with their loved ones' healthcare professionals can be that of warmly appreciative partners or coldly suspicious antagonists. But there are ways that family caregivers can build mutual trust with physicians, nurses, and other healthcare professions for the sake of their loved ones and themselves.

This webinar presented by the Family Caregiver Alliance features a clinical psychologist, healthcare consultant, and caregiving author and AARP.org columnist. It discuss why professionals’ ideas about “patient-centered care” sometimes excludes family members, how caregivers can present themselves as effective collaborators, and ways to productively question professionals' treatment plans. Case illustrations will be used throughout.

12 Self-Care Tips for Nurturing Your Body
As a caregiver to your loved one, taking care of your own needs can sometimes fall to the bottom of your list of priorities. But looking after your self-care is not only essential to your well-being, it even helps you to be the best caregiver you can be.

Self-care covers many areas of your life (e.g., social, creative, financial, etc.) that all work together to help you feel healthy and whole. In this post, we’ll look specifically at how to nurture your physical wellness as part of your holistic self-care habits.

Self-care is about purposefully giving back to yourself to enhance or maintain your own physical and emotional well-being. It can include activities to meet your basic needs or doing something special that you enjoy and makes you feel good.

A Guide to Caregiving and Senior Living Options for Seniors with Obesity

As people age, the risk for health conditions increases. Many of the health issues connected with age, including arthritis, heart disease and type 2 diabetes, can make the older years of life more challenging. During retirement, many people also become less active. They may lack the ability to cook healthy foods, which can contribute to obesity — another disease that often affects the elderly. In turn, obesity can exacerbate other health issues and create additional challenges for family members taking on the role of caretaker.

A Step-by-Step Guide to Hiring an In-Home Caregiver

As the baby boomer generation ages, most are expressing their desire to age in place and live independently. For many, the thought of leaving their home and the familiarity of their communities for residential care facilities is daunting. But they're also worried about the risks to their safety, such as falling, that come with independent living, especially those with mobility or health issues.

If this sounds familiar, you may find that in-home care is the solution because it provides similar services to those delivered in residential care facilities. While it’s a great option, it's important to choose the right caregiver because they will have almost total access to your home. They might see sensitive information and will certainly be in daily contact with your personal belongings. It’s therefore crucial you diligently research in-home care providers so you can be as sure as possible you’ve hired a reputable agency with trained and vetted caregivers.

How to Talk to Someone with Alzheimer's

The family of Jack Hanna, the celebrity zookeeper and media personality, has opened up about his Alzheimer’s diagnosis, offering an intimate look at the challenges of communicating with a man who no longer remembers who most of them are.

“My husband is still in there somewhere,” Suzi Hanna, his wife of 54 years, told The Columbus Dispatch in a story that follows Mr. Hanna as he asks several dozen times if the dog has been fed. He also listens to a family conversation, unaware that his daughter is discussing the pain of being forgotten by him.

Podcast: Combating the "Multi-Dimensional Beast" of Chronic Pain

Chronic pain, according to a 2023 study, affects more Americans than diabetes, depression, and hypertension. Yet the disease is poorly understood, often undiagnosed or misdiagnosed, and effective treatments are in short supply.

A recent study in Nature Neuroscience provides new insights into how the disease affects the nervous system. For the first time, researchers recorded data from inside the brains of individuals who were suffering chronic pain and found distinct biomarkers for the disease. These insights are an important first step toward better diagnosing and treating chronic pain.

In this podcast episode, the lead author of that study, Prasad Shirvalkar, a neurologist and interventional pain medicine specialist at the University of California, San Francisco, talks with managing editor Jason Lloyd about his research and how it could transform physicians’ understanding and treatment of what Shirvalkar calls a “multi-dimensional beast.”

What is Limbic-Predominant Age-Related TDP-43 Encephalopathy (LATE)?

Limbic-predominant age-related TDP-43 encephalopathy (LATE) is a recently characterized type of dementia. Similar to other forms of brain disorders, such as Alzheimer’s disease, LATE causes problems with memory and thinking but has different underlying causes.

Background Checking: Resources That Help

Stories fill the news about aides who take advantage of, rather than care for, a parent, spouse, or other family member in their home. Drained savings accounts, missing jewelry, and unexplained bruises are all too common experiences. One way to avoid becoming a victim is to conduct an attendant background check. Background checks include a review of job performance and verification that the information provided to the family caregiver is accurate, and that the attendant can do the job that the caregiver needs to be done.

Does Medicaid Pay for Assisted Living?

Medicaid is a public health insurance program for people with low income and limited assets. It makes medical care more accessible for eligible adults, older adults, children, pregnant women, and people with disabilities. Medicaid is not the same as Medicare, which is a federal health insurance program for adults age 65 and older and certain younger people with disabilities.

In addition to routine and acute health care services, Medicaid provides limited coverage for long-term care. This includes assisted living.
A Crisis Guide for Caregivers of Seniors with Alzheimer's or Other Dementia

Alzheimer’s disease and other forms of dementia have physical and psychological effects that can make it difficult for seniors to maintain their independence. If you have a loved one with one of these diseases, it’s important to understand the changes that can occur.

Having dementia puts older adults at risk of several types of crises, including wandering, increased aggression, hallucinations and depression. This guide provided by Caring.com covers the most common crisis situations and offers tips for preventing them. It also explains what to do if one of these crises occurs and provides some resources to help you navigate the complexities of caring for someone with Alzheimer’s disease or dementia.

A Caregiver’s Guide to Sundowning and Dementia

Caring for an older adult is never easy, but it’s even more of a challenge when that person has dementia. In addition to running errands and providing daily supervision, you need to watch for behavioral changes and signs of worsening memory loss. You may also have to provide assistance with bathing, toileting and other activities of daily living, increasing the physical stress on your body.

Some seniors with dementia experience sundowning, a phenomenon that causes concerning symptoms. Fortunately, there are several things you can do to reduce the risk of sundown syndrome or shorten the length of an episode. This guide produced by Caring.com defines sundowning, explains what causes it and provides tips to help you cope. It also includes a list of resources for families who need support caring for someone with dementia.

Daily Multivitamin May Enhance Memory in Older Adults

Memory and thinking skills tend to decline as we get older. Certain lifestyle factors—such as a healthy diet, physical activity, and social interactions—might help to protect cognitive health as we age. Some studies have suggested that taking multivitamins or other dietary supplements may help protect thinking and memory. But few large-scale studies have directly examined how dietary supplements affect cognitive health in older adults. Clinical trials to date have shown mixed results.

Report: Emerging Respite Care Strategies in Medicaid Home and Community-Based Services Waivers for Older Adults, Adults with Physical Disabilities, and Their Family Caregivers

The National Academy for State Health Policy (NASHP) has published a report, "Emerging Respite Care Strategies in Medicaid Home and Community-Based Services Waivers for Older Adults, Adults with Physical Disabilities, and their Family Caregivers."

Abundant research — and often our own lived experience — points to the physical, mental, and emotional toll of caregiving. With caregivers increasingly asked to perform more intense and complex care, respite care is integral to giving caregivers a much-needed break. Respite care is a service typically delivered in the home or a facility-based setting that provides short-term relief for caregivers. It is one of the most desired caregiver services, and Medicaid is one policy lever to fund it. Through Medicaid’s federal-state partnership and under a variety of home and community-based services (HCBS) coverage authorities, states have the flexibility to design HCBS to meet the long-term care needs of their populations. While states utilize a number of federal programs to provide respite, Medicaid is the largest payer of long-term care services, including respite.

Durable Medical Equipment: What's Covered by Medicare?

Medicare Part B covers durable medical equipment (DME), which is equipment that helps you complete your daily activities. Medicare usually covers DME if the equipment:

- Is durable, meaning it is able to withstand repeated use
- Serves a medical purpose
- Is appropriate for use in the home, although you can also use it outside the home
- Is likely to last for three years or more

There are many important things to know about Medicare’s coverage rules for DME and how to access the equipment you need.

Does Medicare Pay for Assisted Living?

Medicare is a federal health insurance program that covers a broad range of medical services for older adults, including routine doctor visits, preventive care, and hospital stays. While most people become eligible for Medicare when they turn 65, the program also covers younger people with certain disabilities. Note that Medicare is not the same
as Medicaid—a public health insurance program for populations with low income.

If you’re enrolled in Medicare or about to turn 65, you might be wondering: “Will Medicare pay for assisted living?” Here’s all you need to know.

Alzheimer's Disease: Common Medical Problems

In addition to the symptoms of Alzheimer's disease, a person with Alzheimer's may have other medical problems over time, as all older adults do. These problems can cause more confusion and behavior changes. The person may not be able to tell you what is wrong. As a caregiver, you need to watch for signs of illness and tell the doctor about what you see. Here are some common medical problems to watch for.

Home Safety Checklist for Alzheimer's Disease

Use the following room-by-room checklist to alert you to potential hazards and to record any changes you need to make to help keep a person with Alzheimer's disease safe. You can buy products or gadgets necessary for home safety at stores carrying hardware, electronics, medical supplies, and children's items.

Keep in mind that it may not be necessary to make all of the suggested changes. This article covers a wide range of safety concerns that may arise, and some modifications may never be needed. It is important, however, to re-evaluate home safety periodically as behavior and abilities change.

Special Concerns of LGBTQ+ Caregivers

As Americans live longer, greater attention is being paid to the concerns facing aging adults and caregivers. While many issues are the same for all older adults and those who care for them, some unique considerations arise for lesbian, gay, bisexual, and transgender (LGBTQ+) people dealing with aging.

Even as attitudes have changed and LGBTQ+ people have become more visible and accepted, families of choice still provide invaluable networks of emotional and social support. Nearly two-thirds of LGBTQ+ older adults say they consider their friends to be chosen family.

7 Signs of Caregiver Burnout

Caregiver burnout is a state of stress-related exhaustion associated with the difficulties of caregiving. The exhaustion of caregiver burnout may be physical, mental, or emotional, and may lead to feelings of guilt. This condition is often confused with clinical depression, as caregiver burnout and depression share many of the same symptoms. Though these conditions are similar, caregiver burnout is unique to caregivers.
