

# THIS WEEK IN CAREGIVING

June 21, 2023

## CAREGIVING IN THE NEWS

### Can We Learn to Embrace Robotic Caregivers?

"I don't like AI," my mom yells from afar before we say hello. I've called to ask my parents about robots and a stickier subject—robot caregiving for later life. My mom is suspicious about allowing cold technology to take over warm, everyday tasks—convenience be damned. My dad is more optimistic, but he's still a bit skeptical of how well a society that's had its share of slip-ups will safely integrate robots.

Perched in their condo on the South Carolina coast, with many retiree neighbors, they have an up-close view of end-of-life uncertainties.

Artificial intelligence has brought robots a step nearer to the public consciousness as we question the myriad uses of machines that can deliver our food, drive our cars, and maybe even do our jobs.

### What It's Like to Care for Your Kids and Your Chronically Ill Partner

One month after their 2019 wedding, Amanda Stevens and her husband received devastating news: Eric, a former NFL player and firefighter, was diagnosed with ALS. Amanda now cares for him while raising their 2-year-old daughter, making her part of a small group of spousal caregivers who are also parenting young children in America.

In the United States, only 12% of the estimated 47.9 million unpaid family caregivers of adults care for their spouse or partner. When dependent children are added to the equation, Stevens's situation

### Taking an Important Step in Supporting Military and Veteran Caregiving Children

After nearly two decades of wars in Iraq and Afghanistan, discussions about America's wounded, injured, or ill military service members and veterans fail to sufficiently address the well-being of the children who live with and help care for them.

According to the first-ever study of children growing up in military and veteran caregiving homes—conducted by Mathematica in partnership with the Elizabeth Dole Foundation — about 2.3 million children under 18 live with

becomes even rarer.

## NAC NEWS AND UPDATES

### Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups

[DOWNLOAD NOW](#)

### Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups

The National Alliance for Caregiving (NAC) has released a new publication to assist patient advocacy groups in their efforts to support diverse family caregivers. Through research with professional patient advocacy group representatives and diverse family caregivers in the condition areas of lung cancer, heart disease, blood cancer and lupus, *Supporting Diverse Family Caregivers: A Guide for Patient Advocacy Groups* addresses the impact of culture and identity on the way that family caregivers provide care, and introduces ways in which patient advocacy groups can support their caregiving experience through culturally responsive resources and supports. The number of diverse family caregivers in the United States is growing yearly, and their aggregate number will soon surpass non-Hispanic white, non-LGBTQ+ caregivers. This guide was created with support from AstraZeneca.

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. [Assessing the Pain of Care Recipients: Tools Available to Family Caregivers](#) utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

**NAC Releases New Report: Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health**

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America's 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it's needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC's report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

## EVENTS & OPPORTUNITIES

**JUNE**

### **Alzheimer's, Dementia, and the LGBTQ+ Community**

**June 21, 2023 | 11:00 AM - 12:00 PM ET | Online**

Did you know that LGBTQ+ older adults exhibit several health disparities which increase the risk of developing Alzheimer's and other dementias? Join Dr. Elliot Montgomery Sklar and Lucy Barylak, MSW on June 21st for a discussion on this important topic.

This webinar will be hosted by the WellMed Charitable Foundation.

To register for this event, click the red button below.

## Diabetes and Dementia

June 21, 2023 | 1:00 PM - 2:00 PM ET | Online

Diabetes is a chronic metabolic disease characterized by elevated levels of blood sugar, which leads over time to serious damage to the heart, blood vessels, eyes, kidneys, nerves and brain. It is among the top risk factors for dementia. This course hosted by the American Society on Aging will provide strategies to address diabetes and build cognitive resilience.

### Participants in this webinar will be able to:

- List 6 or more modifiable risk factors for dementia.
- Summarize the link between diabetes and dementia.
- Identify effective interventions and strategies to address diabetes.
- Identify special considerations for high-risk populations.

### Presenter:

Constance Brown-Riggs is an award-winning registered dietitian and nutritionist, certified diabetes care and education specialist, and the author of several diabetes books, two of which received Hermès Gold Creative Awards: “Living Well with Diabetes 14 Day Devotional” and “The Diabetes Guide to Enjoying Foods of the World.” Brown-Riggs is an expert in nutrition, diabetes and the cultural issues that impact the health and healthcare of people of color. She is a former member of the board of directors for the Association of Diabetes Care and Education Specialist and a past chair of the Diabetes Dietetic Practice Group of the Academy of Nutrition and Dietetics. Learn more about her at [www.eatingsoulfully.com](http://www.eatingsoulfully.com).

## Essentials of Caregiving: Learning to be a Caregiver

June 23, 2023 | 2:00 PM - 3:30 PM ET | Online

Whether you have recently taken on the new role of a family caregiver or have been established in the role for some time, join School of Nursing at UT Health San Antonio on June 23rd (2:00 PM ET) for an online session that will assist you in navigating the experience of caring for your loved one.

The School of Nursing's presenters bring their professional and personal experiences to this informational opportunity. Sheran Rivette, Family Caregiver Specialist at the School of Nursing, cared for her late husband who lived with dementia. She brings her expertise in care management and will provide tips and tricks that supported her in her role. Dr. Sara Masoud brings her experience as a former family caregiver and her expertise as the Program Manager at the university's Caring for the Caregiver program.

## Dispelling the Myths of Hospice Care

**June 26, 2023 | 12:00 PM - 1:00 PM ET | Online**

Some of the most significant barriers to a patient with a terminal illness receiving hospice care are misperceptions held by their families and healthcare team alike. Tune in on June 26th for a webinar hosted by HopeHealth Hospice & Palliative Care that will address the most common misperception about hospice care.

1 hour, 1 CE available for RN/LPN and SW

Course Details: All courses are held through Zoom. You will receive emails with the Zoom link two days before, two hours before and 10 minutes before the course. Please be sure to check your junk and spam folders. Please note: cameras will be required to be turned on throughout the duration of the class.

To register for this event, click the red button below.

## Creating an End-of-Life Plan

**June 27, 2023 | 11:30 AM - 12:30 PM ET | Online**

Thinking and talking about your final wishes can be tough. But doing the work of deciding, discussing, documenting and sharing those wishes with your loved ones has proven to provide peace of mind for everyone.

Getting the practical side of your affairs in order will give reassurance that "everything is taken care of" to those you care most about and unburden them from having to make difficult yet necessary decisions as they grieve and mourn.

Attend this AARP webinar June 27th to learn how to:

- Plan and document your wishes in case of medical or other emergencies
- Track important medical and insurance information
- Store key information on property, vehicles and non-financial assets
- Document what you have and what you owe
- Make the "unseen" visible by creating a digital estate plan
- Express your final wishes for how you'd like to be remembered
- Provide grief support to your loved ones before and after your death
- Store and digitally access all your final wishes documents

To register for this event, click the red button below.

**Advanced Care Planning, Education,**

# Empowerment and Advocacy

June 27, 2023 | 1:00 PM - 2:00 PM ET | Online

Join the American Society on Aging on June 27th for an interactive program that will discuss how to engage patients and families to start a conversation about advance care planning. It will review communication barriers and discuss tools to support the patients and families.

**Participants in this webinar will be able to:**

- Identify end-of-life issues that need to be addressed.
- Discuss ways to start a conversation and when to start a conversation about advance care directives.
- Review tools and apps available to support patients and families.

**Presenter:** Ottamissiah (Missy) Moore, RN, has a wealth of experience and knowledge in nursing that spans more than 37 years, including extensive experience in hospice, long-term care, nursing regulation, wound care, and networking. Moore plans to share her nursing with healthcare providers and mentor many nurses before she retires.

## Webinar: Emergence Respite Care Strategies in Medicaid Home and Community-Based Services Waivers

June 29, 2023 | 3:00 PM - 4:00 PM ET | Online

Family caregivers play an important role in caring for Medicaid home and community-based services (HCBS) waiver participants. Respite care is a service delivered in the home or a facility-based setting to provide short-term relief for caregivers. Although most states offer respite through Medicaid, varied program policies and payment rates among states greatly affect caregivers' access to high quality respite services.

Tune in on June 29th for a webinar that will be hosted by [RAISE Act Family Caregiver Resource and Dissemination Center](#). This event will highlight key takeaways from a [new report](#) by the National Academy for State Health Policy that explores emerging respite care strategies within Medicaid HCBS waivers serving older adults and adults with physical disabilities. Kentucky and Virginia Medicaid officials will also outline respite care policies that increase service access within their states, with a particular focus on how other states can replicate.

**2023 Health Equity Accelerator Awards:  
Application Guidelines**

**Deadline: June 30, 2023**

Sanofi believes every person has the right to a fair and just opportunity to be as healthy as possible, and no one should be disadvantaged from getting the care they deserve. It created the Health Equity Accelerator Awards to encourage and support the efforts of US advocacy groups. The advocacy community actively engages with patients and caregivers in underserved communities to address inequities. Alongside this progress, there is opportunity to apply learned experiences and bring new thinking to solve the many challenges that limit peoples' access to care.

This year 10 awards will be given to US advocacy groups for innovative programs that address specific health disparity challenges impacting underserved populations\*.

US-based non-profit advocacy organizations are invited to apply by proposing innovative programs to address these challenges. A panel of judges will select a winner for each challenge category based on evaluation criteria, and the corresponding non-profit organizations will receive a \$50,000 healthcare contribution from Sanofi.

To learn more or to apply, click the red button below.

## **Keeping the Communication Going**

**July 3, 2023 | 1:30 PM - 3:00 PM ET | Online**

Tune in on July 3rd for an online session that will explain how dementia can affect language and communication. There will be an opportunity to explore the emotional impact of a breakdown in communication / relationships for a carer and the person with dementia and to identify strategies to help establish effective and meaningful interactions.

This session is for you if:

- you would like to gain a better understanding of how communication can be affected for a person with dementia
- you would like to learn about different strategies to support a persons ability to communicate and understand
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

## Memory Changes

**July 10, 2023 | 1:30 PM - 3:00 PM ET | Online**

As dementia progresses, it affects people's ability to store and retrieve information as the memory becomes less efficient.

Join Dementia Carers Count on July 10th for an event that will focus specifically on some of the memory challenges which can occur for a person with dementia and some ideas and strategies to support these challenges. It will provide you with the confidence to try new ways to support the person and to look after yourself.

The session is for you if you would like to ...

- Learn about how changes in the brain can affect memory
- Get ideas for supporting the person's memory
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment.
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

## Preparing to Be a Caregiver

**July 11, 2023 | 8:00 PM - 9:00 PM ET | Online**

Taking care of a loved one at home can be a challenging and lonely responsibility even as it offers its own rewards. Developing a team approach to caregiving and identifying helpful resources in your community can help make caregiving more manageable. Join AARP on July 11th for a webinar that will explore key steps in the planning process, including:

- How to start the conversations about caregiving
- Strategies for forming your caregiving team
- Ways to find local resources and support
- How to care for yourself and connect with other caregivers

After the workshop, participants will receive AARP tools and resources such as AARP's Prepare to Care publication.

To register for this event, click the red button below.

## **Taking Care of Yourself While You Care for Others**

**July 13, 2023 | 12:00 PM - 1:00 PM ET | Online**

Caring for yourself is one of the most important things you can do as a caregiver. But often, caregivers prioritize the needs of others over their own.

In this presentation hosted by the Ontario Caregiver Organization on July 13th, Laura Jackson, a registered nurse and healthcare leader, will identify ways to care for yourself. Attendees will learn:

- The art and science of self-compassion and how to cultivate it in your life
- Tips for making and developing your own routine to practice self-compassion and mindfulness
- How to foster boundaries as a caregiver without guilt, anger, and resentment

Laura Jackson, RN, BScN, MN, CPMHN(C), NBC-HWC, is a caregiver, healthcare leader,

mental health, and self-care advocate. She has worked in various roles, including as a health and lifestyle coach, mindfulness, yoga and self-compassion facilitator, wellness leader, healthcare administrator and professional practice clinician. She currently works in mental health as well as maintains a private wellness practice.

To register for this event, click the red button below.

## How to Know When Home Care Is No Longer Enough

**July 18, 2023 | 1:00 PM - 2:00 PM ET | Online**

This webinar will help you better understand caregiver needs and provide options to aid people who are on the cusp of moving to long-term care to stay in their homes for as long as possible. It will address ways to recognize and delay that moment. But if that day comes, you should have a way to help your clients and their families make the best decision possible. We know you care about each and every one of your clients. We hope that after this webinar, you'll know how to guide their decisions in a way that feels true to your values and to theirs.

**Participants in this webinar will be able to:**

- Describe the benefits of being a caregiver
- Empower caregivers to advocate for their needs and plan for care transitions
- Describe uses for technology in caregiving
- Use various ethical and professional frameworks to help caregivers reach difficult decisions about roles and fairness between various caregivers and the care recipient.

To register for this event, click the red button below.

## Hearing Loss and Dementia

July 19, 2023 | 1:00 PM - 2:00 PM ET | Online

There is growing evidence that suggests a link between hearing loss and dementia. Several studies have shown that individuals with hearing loss are at a higher risk of developing dementia and other cognitive impairments. This course provides strategies and resources to help health professionals to address treat hearing loss and build cognitive resilience.

**Participants in this webinar will be able to:**

- List 6 or more modifiable risk factors for dementia.
- Summarize the link between hearing loss and dementia.
- Identify effective interventions and strategies to address hearing loss with a special focus on adults ages 45 and older.
- Identify special considerations for high-risk populations.

**Presenter:** Frank Robert Lin, MD, PhD is a professor of Otolaryngology, Medicine, Mental Health and Epidemiology and director of the Cochlear Center for Hearing and Public Health at the Bloomberg School of Public Health. Dr. Lin completed his medical education and residency in Otolaryngology, and got his doctorate in Clinical Investigation, all at Johns Hopkins. He completed further otologic fellowship training in Lucerne, Switzerland. Dr. Lin's clinical practice is dedicated to otology and the medical surgical management of hearing loss. His public health research focuses on understanding how hearing loss affects the health and functioning of older adults and the strategies and policies needed to mitigate these effects.

## Spousal Caregiving

**August 2, 2023 | 1:00 PM - 2:00 PM ET | Online**

Among the tens of millions of family caregivers, about 12% of them are caring for an ill or disabled spouse or partner. Elements of caring for a spouse or partner differ from other types of caregiving relationships. On average, spousal caregivers provide more hours of caregiving, do more intense care-related tasks and do it all with less assistance compared to other types of caregivers. Professionals who understand the nuances of spousal caregiving can be better positioned to help these individuals.

Join the American Society on Aging on August 2nd for a presentation on spousal caregiving.

**Participants in this webinar will be able to:**

- Learn about the prevalence and characteristics of spousal caregivers
- Understand the challenges unique to spousal caregivers
- Discover support and resources for spousal caregivers

To register for this event, click the red button below.

## Planning for Getting Paid for Caring for a Family Member

**August 11, 2023 | 2:00 PM - 3:00 PM ET | Online**

The direct care workforce shortage means many families simply can't find a direct care worker to hire. More and more families may use the caregiving budget to reimburse a family member for providing care. With a new planning tool provided by The Caregiving Years Training Academy, families can create plans to hire a family member and be empowered to have effective conversations with a financial planner and elder law attorney to ensure that they created the right solution for their family.

Join Denise Brown for a 50-minute meeting to explore the possibility of paying a family member (including yourself) for providing care.

Before joining us:

- Download our **Paying for Care Planning Tool** to use during our 50-minute session.

Denise began helping family caregivers in 1990 and launched one of the first online caregiving communities in 1996. She managed the community until its sale in March 2020 in order to focus on her training and development programs. Denise began helping her father in 2004 after his bladder cancer diagnosis. She also helped care for her mother for seven years until her death in August 2022.

## Useful Technology for Caregivers

**August 15, 2023 | 7:00 PM - 8:00 PM ET | Online**

As a caregiver, technology can make your life so much easier! There are so many useful gadgets and tools out there that can help you with everything from keeping track of medication schedules to monitoring your loved one's safety. With the help of these tools, caregivers can better care for their loved ones while still maintaining their own well-being. So don't be afraid to try out some of these useful technologies and see how they can benefit you and your loved one!

Join Willing Hearts, Helpful Hands on August 15th for a discussion of the ways that technology can assist caregivers taking care of a loved one.

A Zoom meeting ID and password will be emailed to all participants 15 minutes prior to the start of the event.

To register for this event, click the red button below.

## Tips for Caregivers to Safely Assist with Mobility and Navigate Change

**August 17, 2023 | 12:00 PM - 1:00 PM ET | Online**

Does your care recipient need help getting up from a chair or transitioning from place to place? Is this task new and difficult for you? Is this something that you may be struggling with? Sometimes moving and providing physical support to your care recipient can be challenging. Caregivers may not realize that they can risk their own physical health while doing their best to negotiate these new tasks.

Join the Ontario Caregiver Organization on August 17th to learn more about:

- Acknowledging the emotional challenges that accompany this part of the role
- Tips for moving your care recipient safely
- A discussion on in-home safety devices that could support you
- Lived caregivers' experiences

Who should attend this event? Caregivers who want to learn more about safe moving and handling of care recipients.

Our speaker: Taryn Bolt is a Community Education Program Lead and registered Occupational Therapist at the Mississauga Halton Regional Learning Centre. Taryn brings over a decade of educational and clinical experience in community healthcare to her current role.

## **PATIENT AND CAREGIVER STUDIES**

### **Aerobic Exercise to Improve Memory in Older Adults with Mild Cognitive Impairment**

Start: March 1, 2019

End: March 31, 2024

Enrollment: 160

**Who is sponsoring this study?** University of Delaware

**Where is this study located?** Delaware

#### **What is this study about?**

This study will evaluate the effects of aerobic exercise on brain structure and memory in older adults with mild cognitive impairment. Participants will be randomly assigned to either a supervised aerobic exercise group (treadmill and stationary bicycle) or a supervised group that will do stretching activities. Both groups will meet for three sessions each week for 12 weeks. At the start of the study and again at 12 weeks, researchers will use an MRI scan to assess changes in brain structure, volume, and function. Additional tests will measure memory, cardiorespiratory fitness, and cognitive function.

#### **Do I qualify to participate in this study?**

Minimum Age: 60 Years

Maximum Age: 90 Years

#### **Must have:**

- Cognitive function test scores consistent with amnesic mild cognitive impairment
- Mini-Mental State Examination score >24
- 

#### **Must NOT have:**

- Major psychiatric disorder (e.g., schizophrenia, bipolar disorder, major depression) within past two years
- Neurological or autoimmune condition affecting cognition (e.g., Parkinson's disease, epilepsy, multiple sclerosis, head trauma with loss of consciousness greater than 30 minutes)
- Any significant medical illness (e.g., cardiovascular disease, cancer, kidney failure, diabetes, chronic obstructive pulmonary disease, liver disease, high blood pressure)
- Current medication use that may affect central nervous system functions (e.g., long-acting benzodiazepines)
- Failure of exercise screening test
- Factors affecting ability and/or safety of MRI scanning (e.g., claustrophobia, metal implants, pacemaker)
- Concussion within last two years or more than three concussions in lifetime

- Smoking (including marijuana) within the past three months

## **Masupirdine for Agitation in People with Alzheimer's Disease**

Start: November 1, 2022

End: January 2025

Enrollment: 375

### **What is this study about?**

This Phase 3 study will test the safety and effectiveness of the experimental drug masupirdine (SUVN-502) to reduce agitation in older adults with Alzheimer's disease. Participants will be randomly assigned to take either a placebo or one of two doses of the study drug by mouth daily for three months. Researchers will evaluate agitation at the start and end of the study and monitor participants for any side effects.

### **Do I qualify to participate in this study?**

Minimum Age: 50 Years

Maximum Age: 90 Years

#### **Must have:**

- Diagnosis of Alzheimer's disease, based on a clinical evaluation with:
  - Mini-Mental State Examination score between 8 and 24
  - History of physical agitation (e.g., kicking, biting, flailing) that interferes with daily functioning (e.g., bathing, dressing) and social activities, or requires medical intervention
- Availability of a caregiver to help participant complete study procedures

#### **Must NOT have:**

- Diagnosis of a neurological condition causing cognitive impairment other than Alzheimer's disease (e.g., vascular dementia, Parkinson's disease, Lewy body disease, frontotemporal dementia)
- Agitation caused by a condition other than Alzheimer's (e.g., pain; other psychiatric disorders; delirium due to a metabolic disorder, systemic infection, or substance use)

To learn more or to participate in this study, click on the red button below.

## **Dominantly Inherited Alzheimer Network Trial Unit (DIAN-TU)**

Start: December 2012  
End: October 2027  
Enrollment: 490

**Who is sponsoring this study?** Washington University School of Medicine

**Where is this study located?** Multiple states

**What is this study about?**

This ongoing study is testing the safety and effectiveness of several experimental drugs to slow the progression of cognitive impairment in people with an inherited Alzheimer's disease-causing gene mutation. Specifically, mutations in presenilin 1 (PSEN1), presenilin 2 (PSEN2), and amyloid precursor protein (APP) genes are associated with inherited Alzheimer's disease. All participants will be tested to determine if they have one of the mutations. Participants found to have one of the mutations will be randomly assigned to receive injections of one of the study drugs. Those participants who do not have a mutation will be randomly assigned to receive injections of either a study drug or a placebo. Injections will be given every four weeks for up to 208 weeks. Researchers will measure changes in cognition, blood and spinal fluid biomarkers, abnormal amyloid and tau protein in the brain, and brain glucose metabolism. Measurements will be done at the start of the study and then again at weeks 52, 104, 156, and 208. The study, called DIAN-TU, will test several different study drugs, starting with gantenerumab and solanezumab.

**Do I qualify to participate in this study?**

Minimum Age: 18 Years  
Maximum Age: 80 Years

**Must have:**

- Have a genetic mutation that causes Alzheimer's disease or are a family member with an dominantly inherited Alzheimer's disease (DIAD) mutation
- No more than 10 years after the predicted or actual age of cognitive symptom onset
- Cognitively normal or with mild cognitive impairment or mild dementia (Clinical Dementia Rating score of 0 to 1)
- Fluency in trial-approved language and adequate intellectual functioning (aside from mild impairment)
- Able to undergo magnetic resonance imaging (MRI), lumbar puncture, and positron emission tomography and to complete all study-related testing and evaluations
- Females of childbearing potential must agree to use effective contraception if partner is not sterile
- Visual and hearing abilities adequate to complete cognitive and functional assessments
- Study partner who can attend visits and provide information on participant's cognitive and functional abilities
- 

**Must NOT have:**

- Evidence of significant abnormality on brain MRI scans
- Alcohol or drug dependence within past year
- Pacemakers, aneurysm clips, artificial heart valves, ear implants, or foreign metal objects in the eyes, skin, or body that would prevent MRI
- History or presence of significant cardiovascular disease, liver/kidney disorders, infectious disease or immune disorder, or metabolic/endocrine disorders
- Taking anticoagulants; low-dose aspirin (325 mg or less) is allowed
- Exposed to a monoclonal antibody-targeting beta-amyloid peptide within past 6 months
- Cancer in last 5 years, except basal cell carcinoma, nonsquamous skin carcinoma, prostate cancer, or carcinoma in situ with no significant progression in past 2 years
- Positive pregnancy test or plans to become pregnant during the trial period

## Trappsol Cyclo for Early-Stage Alzheimer's Disease

Start: Sept. 23, 2022

End: March 31, 2024

Enrollment: 90

**Who is sponsoring this study?** Cyclo Therapeutics, Inc.

**Where is this study located?** Multiple states

### What is this study about?

This Phase 2 trial will test the safety and effectiveness of the experimental drug Trappsol Cyclo to improve cognition and daily functioning in older adults with mild cognitive impairment due to early-stage Alzheimer's disease. Participants will be randomly assigned to receive either Trappsol Cyclo or a placebo by IV infusion for four hours once a month. Participants will complete questionnaires and memory tests, and provide blood samples at the start of the study, and after 4, 8, 12, and 24 weeks. Researchers will measure changes in cognition and daily functioning, and track the concentration of the drug in the blood. They will also monitor all participants for safety and any side effects throughout the trial.

### Do I qualify to participate in this study?

Minimum Age: 50 Years

Maximum Age: 80 Years

#### Must have:

- Diagnosis of mild cognitive impairment due to early-stage Alzheimer's
- Mini-Mental State Examination score of 20 to 28 at study screening and the start of the study, with no more than a three-point change between visits
- Evidence of amyloid deposits based on either a blood test or an MRI brain scan

#### Must NOT have:

- Serious kidney disease
- Evidence of a neurodegenerative disease other than Alzheimer's
- Severe hypothyroidism
- Abnormally low levels of Vitamin B12 in the blood
- Serious vision, hearing, or language problems that would interfere with taking memory tests

To learn more or to participate in this study, call Lori Gorski at (386)418-8060 or email her by clicking on the red button below.

## Trazodone to Improve Sleep and Memory in People with Early Alzheimer's Disease

Start: Jan. 4, 2023

End: May 2028

Enrollment: 100

**Who is sponsoring this study?** Johns Hopkins University

**Where is this study located?** Maryland

### **What Is This Study About?**

This Phase 2 study, named REST, will examine the effectiveness of the FDA-approved drug trazodone to improve sleep and memory in people with mild cognitive impairment due to early Alzheimer's disease. Participants will be randomly assigned to take either trazodone or a placebo pill at bedtime for one month, pause for one month without pills, then switch groups for one month. Throughout the three-month study, participants will wear a sleep-monitoring device on their wrists. In addition, participants will perform and complete four home sleep tests during the study. At the start and end of the study, participants will fill out questionnaires about their sleep, complete memory tests, and undergo MRI brain scans.

### **Do I Qualify To Participate in This Study?**

Minimum Age: 55 Years

Maximum Age: N/A

#### **Must have:**

- Mild cognitive impairment due to early Alzheimer's disease, based on the study screening evaluation, including:
  - Clinical Dementia Rating score of 0.5, with a Memory Box score > 0.5
  - Repeatable Battery for the Assessment of Neuropsychological Status (RBANS) list recall memory performance score > 1.5 standard deviation below cognitively normal people of the same age and education
- Evidence of sleep problems, with Pittsburgh Sleep Quality Index score of > 5
- Adequate vision and hearing to complete study tests
- Overall good health, with no disease that could interfere with the study
- Able to have Magnetic Resonance Imaging (MRI) scan
- Availability of a study partner who knows the participant well and is able to answer questions and attend study visits

#### **Must NOT have:**

- Frailty or any other condition that may interfere with ability to complete study procedures
- Diagnosis of any significant or unstable medical condition that could make it difficult to complete study procedures
- Diagnosis of obstructive sleep apnea or apnea/hypopnea index score of >15 at the start of the study
- Diagnosis of dementia
- Any medical or neurologic condition other than mild cognitive impairment that could be causing thinking and memory issues
- Delirium
- Allergy to trazodone
- Currently taking sleep medications, including trazodone
- Current substance abuse
- Current major depressive, manic, or acute psychotic episode
- Diagnosis of serious or unstable medical condition which could make it difficult to complete study procedures
- Any condition that may make having an MRI brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy)
- Diagnosis of long QT syndrome, a heart disorder that causes fast, chaotic heartbeats

To learn more or to participate in this study, call Barry Greenberg at (410)955-1696 or email he by clicking on the red button below.

## **Remternetug for Early-Stage Alzheimer's Disease**

Start: Aug. 1, 2022

End: October 2026

Enrollment: 600

**Who is sponsoring this study?** Eli Lilly and Company

**Where is this study located?** Multiple states

**What is this study about?**

This Phase 3 study, named TRAILRUNNER-ALZ 1, will examine the safety and effects of the experimental drug remternetug in older adults with early-stage Alzheimer's disease. Participants will be randomly assigned to receive one of two different doses of remternetug or a placebo by IV infusion or an injection given under the skin. The study is split into two one-year periods. Participants will switch groups for the second year of the study so that all participants will receive the study drug if they complete the two-year study. At the start, midpoint, and end of each yearlong treatment period, all participants will provide blood samples and undergo PET brain scans to measure amyloid, a protein related to Alzheimer's.

**Do I qualify to participate in this study?**

Minimum Age: 60 Years

Maximum Age: 85 Years

**Must have:**

- Diagnosis of Alzheimer's with:
  - Gradual and progressive change in memory function six months prior to screening
  - Mini-Mental State Examination score of 20 to 28
- PET brain scan consistent with an Alzheimer's diagnosis
- Availability of a reliable study partner who has frequent contact with the participant
- Adequate reading skills, vision, and hearing to complete screening and study tests

**Must NOT have:**

- Diagnosis of any neurological disease other than Alzheimer's, that may affect cognition or ability to complete the study
- Any serious or unstable illness that could interfere with study results or a life expectancy of less than two years
- History of cancer with high risk of recurrence
- Current psychiatric diagnosis, other than Alzheimer's, that could interfere with study results
- History of multiple or severe drug allergies
- MRI brain scan results that indicate a condition that could interfere with the study or make study participation unsafe
- Any condition that may make having an MRI or PET brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy)
- Prior treatment with an anti-amyloid immunotherapy, if the treatment is still in the body
- Received active vaccine against amyloid beta in any other study
- Allergies to remternetug, related compounds, or any of its ingredients

To learn more or to participate in this study, call Eli Lilly at (317)615-4559 or email the company by clicking on the red button below.

## **Genetic Characterization of Movement Disorders and Dementias**

Start: February 12, 2003  
End: December 31, 2059  
Enrollment: 12000

**Who is sponsoring this study?** National Institute on Aging

**Where is this study located?** Maryland

### **What is this study about?**

In this observational study, researchers will examine the genes of families with a history of movement disorders (such as Parkinson's disease) and dementias (such as Alzheimer's disease) to try to find a genetic cause of these disorders. Participants include individuals with a clinical diagnosis of a movement disorder or dementia, their affected and unaffected family members, and unrelated, healthy individuals (to provide control samples). This study usually requires one visit to the NIH Clinical Center where participants will give a blood sample and/or a saliva sample.

### **Do I qualify to participate in this study?**

Minimum Age: 18 Years  
Maximum Age: 100

### **Must have:**

- Diagnosis of a movement disorder or dementia accompanied by sufficient clinical and/or laboratory evidence
- Clinical confirmation of a movement disorder or dementia by the investigator and his associates, either by physical examination and/or review of medical records
- Family member of a person diagnosed with a movement disorder or dementia
- Have no known movement disorder or dementia, or family member with a movement disorder or dementia
- Able to provide consent or, in the case of minors and cognitively impaired individuals, have a legally authorized representative to provide consent
- Able to understand and participate in study procedures or have a legally authorized representative that can consent on participant's behalf

### **Must NOT have:**

- Any movement disorder or dementia caused by a specific environmental exposure, birth injury, metabolic disorder, or brain infection such as encephalitis
- Clinically significant anemia that would make drawing blood unsafe, and participant is unwilling to provide saliva sample
- Clinically significant bleeding that would make drawing blood unsafe, and participant is unwilling to provide saliva sample
- Any medical condition that would make drawing blood unsafe or undesirable (for example, a serious medical illness such as unstable heart disease or unstable chronic obstructive pulmonary disease), and participant is unwilling to provide saliva sample

## Neurofilament Biomarker for Frontotemporal Lobar Degeneration

Start: September 2, 2020

End: December 2025

Enrollment: 335

**Who is sponsoring this study?** The Bluefield Project to Cure Frontotemporal Dementia

**Where is this study located?** Multiple states

### What is this study about?

This study will determine if a protein called neurofilament light chain (NfL) can be used as a biomarker to test potential treatments for familial frontotemporal lobar degeneration (FTLD) before symptoms appear. FTLD is a common cause of dementia in people who are less than 60 years old when the first symptoms appear. This study will compare the levels of NfL protein, over time, in the blood of people with known FTLD genetic mutations to people without known FTLD mutations. Participants will provide blood samples remotely through visits from research nurses four times a year for three years. This study is connected to the [ALLFTD Research Consortium](#) and any biomarker data collected in this study will be correlated with ALLFTD clinical data.

### Do I qualify to participate in this study?

Minimum Age: 18 Years

Maximum Age: 85 Years

### Must have:

- Enrolled in ALLFTD Research Consortium
- Member of a family with a known mutation in C9ORF72, GRN, or MAPT genes

### Must NOT have:

- Inability to receive repeated blood draws (e.g., poor vein access)

To learn more or to participate in this study, call Rachel Acuna-Narvaez at (650)380-1191 or email her by clicking on the red button below.

## Dose Response Study of Donanemab (LY3002813) for Early-Stage Alzheimer's Disease

Start: Feb. 28, 2023

End: May 13, 2025

Enrollment: 800

**Who is sponsoring this study?** Eli Lilly and Company

**Where is this study located?** Multiple states

### **What is this study about?**

This Phase 3 clinical trial, named TRAILBLAZER-ALZ 6, will test the safety and effects of different dosage levels of the experimental drug donanemab (LY3002813), in older adults with early-stage Alzheimer's disease. All participants will be randomly assigned to receive an IV infusion of one of four different dosages of the study drug or placebo. At the start of the study, after six and 12 months, and at a 10-month follow-up visit, all participants will undergo MRI and PET brain scans and provide blood samples.

### **Do I qualify to participate in this study?**

Minimum Age: 60 Years

Maximum Age: 85 Years

#### **Must have:**

- Gradual and progressive change in memory for six months, as reported by the participant or someone who knows the participant well
- Mini-Mental State Examination score of 20 to 28, at study screening
- Evidence of amyloid, a protein associated with Alzheimer's, in the brain, based on PET scan results

#### **Must NOT have:**

- Diagnosis of any neurological disease affecting the central nervous system other than Alzheimer's that may affect cognition or ability to complete the study, including:
  - Other dementias
  - Serious brain infection
  - Parkinson's disease
  - Multiple concussions
  - Epilepsy or recurrent seizures, except fever-related childhood seizures
- Current serious or unstable illnesses that could interfere with the study, including cardiovascular, liver, kidney, intestinal, respiratory, hormonal, psychiatric, immune, or blood disease
- Any condition that may make having an MRI or PET brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy)
- Previously treated with an anti-amyloid immunotherapy
- Life expectancy < two years
- Current or history of malignant cancer within the past five years, with the following exceptions:
  - Nonmetastatic basal- or squamous-cell skin cancer
  - Stage 0 noninvasive carcinoma of the cervix
  - Stage 0 noninvasive prostate cancer
  - Other cancers with low risk of recurrence or spread

## RESEARCH & RESOURCES

### Daily Multivitamin May Enhance Memory in Older Adults

Memory and thinking skills tend to decline as we get older. Certain lifestyle factors—such as a healthy diet, physical activity, and social interactions—might help to protect cognitive health as we age. Some studies have suggested that taking multivitamins or other dietary supplements may help protect thinking and memory. But few large-scale studies have directly examined how dietary supplements affect cognitive health in older adults. Clinical trials to date have shown mixed results.

## **Report: Emerging Respite Care Strategies in Medicaid Home and Community-Based Services Waivers for Older Adults, Adults with Physical Disabilities, and Their Family Caregivers**

The National Academy for State Health Policy (NASHP) has published a [report](#), "Emerging Respite Care Strategies in Medicaid Home and Community-Based Services Waivers for Older Adults, Adults with Physical Disabilities, and their Family Caregivers."

Abundant research — and often our own lived experience — points to the physical, mental, and emotional toll of caregiving. With caregivers increasingly asked to perform more intense and complex care, respite care is integral to giving caregivers a much-needed break. Respite care is a service typically delivered in the home or a facility-based setting that provides short-term relief for caregivers. It is one of the most desired caregiver services, and Medicaid is one policy lever to fund it. Through Medicaid's federal-state partnership and under a variety of home and community-based services (HCBS) coverage authorities, states have the flexibility to design HCBS to meet the long-term care needs of their populations. While states utilize a number of federal programs to provide respite, Medicaid is the largest payer of long-term care services, including respite.

## Durable Medical Equipment: What's Covered by Medicare?

Medicare Part B covers durable medical equipment (DME), which is equipment that helps you complete your daily activities. Medicare usually covers DME if the equipment:

- Is durable, meaning it is able to withstand repeated use
- Serves a medical purpose
- Is appropriate for use in the home, although you can also use it outside the home
- Is likely to last for three years or more

There are many important things to know about Medicare's coverage rules for DME and how to access the equipment you need.

## Does Medicare Pay for Assisted Living?

Medicare is a federal health insurance program that covers a broad range of medical services for older adults, including routine doctor visits, preventive care, and hospital stays. While most people become eligible for Medicare when they turn 65, the program also covers younger people with certain disabilities. Note that Medicare is not the same

as Medicaid—a public health insurance program for populations with low income.

If you're enrolled in Medicare or about to turn 65, you might be wondering: "Will Medicare pay for assisted living?" Here's all you need to know.

To learn more, click the red button below.

**LEARN MORE**

## **Alzheimer's Disease: Common Medical Problems**

In addition to the symptoms of Alzheimer's disease, a person with Alzheimer's may have other medical problems over time, as all older adults do. These problems can cause more confusion and behavior changes. The person may not be able to tell you what is wrong. As a caregiver, you need to watch for signs of illness and tell the doctor about what you see. Here are some common medical problems to watch for.

## Special Concerns of LGBTQ+ Caregivers

As Americans live longer, greater attention is being paid to the concerns facing aging adults and caregivers. While many issues are the same for all older adults and those who care for them, some unique considerations arise for lesbian, gay, bisexual, and transgender (LGBTQ+) people dealing with aging.

Even as attitudes have changed and LGBTQ+ people have become more visible and accepted, families of choice still provide invaluable networks of emotional and social support. Nearly two-thirds of LGBTQ+ older adults say they consider their friends to be chosen family.

## 7 Signs of Caregiver Burnout

Caregiver burnout is a state of stress related exhaustion associated with the difficulties of caregiving. The exhaustion of caregiver burnout may be physical, mental, or emotional, and may lead to feelings of guilt. This condition is often confused with clinical depression, as caregiver burnout and depression share many of the same symptoms. Though these conditions are similar, caregiver burnout is unique to caregivers.

## Easing Depression in Older Adults

Depression is common among older adults. But treatment with the standard type of drugs, called antidepressants, doesn't always work. When depression remains after trying a couple of these drugs, it hasn't been clear what approach might be best.

Researchers studied over 600 adults, ages 60 and older, who had hard-to-treat depression. Participants were divided into three groups. One group added the drug aripiprazole (Abilify) to their prescribed antidepressant. The second group added an antidepressant called bupropion (Wellbutrin). The third group stopped taking their prescribed antidepressant and switched to bupropion.

## What Are Frontotemporal Disorders?

If you start to see changes in the way a loved one under 60 acts, speaks, or moves, you may not think of dementia as a cause. Dementia is a loss of thinking, memory, and reasoning that seriously affects your daily activities. It's more common in older adults. But a group of dementias called frontotemporal disorders, or FTD, occurs most often in people between 45 to 64 years old.

"Many people with FTD start having symptoms in the prime of their life," says Dr. Bradley Boeve, an FTD researcher at the Mayo Clinic.

## **What Is Middle-Stage Dementia, and How Do You Care for Someone Who's Going Through It?**

Dementia progresses in stages. Alzheimer's disease, for example, is considered to have seven distinct stages, delineated by the areas of the brain the disease affects. But the progression of dementia is often unpredictable, and people's symptoms can ebb and flow. To keep things simple, most people talk about dementia overall as having three stages: early-stage, middle and late-stage dementia. Clinicians can distinguish the different stages of dementia, identifying the common symptoms that characterize each phase, which helps people living with dementia and their loved ones plan ahead.

**19 Conditions that Mimic Dementia**

## 19 Conditions that Mimic Dementia

If your older adult has been experiencing cognitive challenges or acting strangely, it's

natural to think Alzheimer's disease or dementia might be the cause. After all, we hear so much about it in the news. Plus, a recent AARP survey found that nearly half of adults 40 and older think they will develop dementia — a share far greater than the condition's actual prevalence.

However, it's important to not jump to the conclusion that it's a non-treatable condition like dementia because there are many treatable diseases that mimic dementia. That's why it's essential to visit a doctor as soon as you realize there's a problem. There could be something relatively simple going on that they can treat.

## Case Study Unlocks Clues to Rare Resilience to Alzheimer's Disease

Biomedical breakthroughs most often involve slow and steady research in studies involving large numbers of people. But sometimes careful study of even just one truly remarkable person can lead the way to fascinating discoveries with far-reaching implications.

An NIH-funded case study published recently in the journal *Nature Medicine* falls into this far-reaching category. The report highlights the world's second person known to have an extreme resilience to a rare genetic form of early onset Alzheimer's disease. These latest findings in a single man follow a 2019 report of a woman with similar resilience to developing symptoms of Alzheimer's, despite having the same strong genetic predisposition for the disease.

## Could "Musical Medicine" Influence Healthy Aging?

Many of us have favorite songs that can help us relax after a hectic day or get us moving on the dance floor. Music can also be a powerful gateway to memory; for example, a song from our past may bring back memories that trigger strong emotions.

But what is happening in our brains when we hear a song that is meaningful to us? Could music make older adults not only feel better but also improve their health? Much more research is needed before any definitive conclusions can be drawn, but there is growing scientific interest in music's effects on the brain and body as we age.

## Caregiving 101: On Being a Caregiver

Caregiving often creeps up on you. You start by dropping by your mom's house and doing her laundry, or taking your dad to a doctor's appointment. You find yourself doing the grocery shopping and refilling prescriptions. Gradually, you are doing more and more. At some point, you realize you have made a commitment to take care of someone else.

Sometimes, caregiving is triggered by a major health event, such as a stroke, heart attack, or accident. Maybe you suddenly realize that dad's memory lapses have become dangerous. Life as you know it stops, and all your energy goes to caring for your loved one. Caregiving has become your new career, and you adjust to a new normal.

## Discussing the Care Economy with Ai-jen Poo

Every day in the United States, 10,000 people turn 65, according to the UN Population Division. We are about to have the largest older population ever. At the same time, nearly 4 million babies are born every year, leaving many Americans juggling caring for young children and aging parents. Caregiving is often cast as nonproductive labor, despite the incredible mental, emotional and physical toll it can take. It's increasingly clear that more resources are urgently needed to support caregivers. How can we rethink our social and economic policies to ensure that more people can age with dignity?

Ai-jen Poo is president of the National Domestic Workers Alliance and executive director of Caring Across Generations. She is also author of the 2015 book *The Age of Dignity: Preparing for the Elder Boom in a Changing America*. She joins *Why Is This Happening* podcast to discuss her personal experiences that led her to be an activist, the need for more infrastructure to support caring for aging populations, the care economy and more.

## New Program Developed to Address Mental Health Needs of Military Caregivers

The Veterans Administration (VA) recently launched a virtual program to pilot mental health services for caregivers enrolled in the **Program of Comprehensive Assistance for Family Caregivers (PCAFC)**. This program will provide much needed resources, tools and support for caregivers while they care for our nations' heroes.

The clinical resource hub will focus on the unique mental health needs of caregivers through evidence-based therapeutic modalities with services centered around couples, family therapy and the individual needs of the caregiver.

## Study of Green Tea and Other Molecules Uncovers New Therapeutic Strategy for Alzheimer's

Researchers have discovered how a molecule found in green tea breaks apart tangles of the protein tau, a hallmark of Alzheimer's disease. Based on this finding, the team identified other molecules that can also untangle tau and may be better drug candidates than the green tea molecule. Results from the NIA-funded study, published in Nature Communications, suggest that this approach may one day provide an effective strategy for treating Alzheimer's.

## **Multivitamins May Help Slow Memory Loss in Older Adults, Study Shows**

A daily multivitamin — an inexpensive, over-the-counter nutritional supplement — may help slow memory loss in people ages 60 and older, a large nationwide clinical trial suggests.

The research, a collaboration between scientists at Brigham and Women's Hospital and Columbia University, appeared in the American Journal of Clinical Nutrition on Wednesday.

## Activities to Do with a Family Member or Friend Who Has Alzheimer's Disease

It's important to spend meaningful time with a family member or friend who has Alzheimer's disease or a related dementia. Participating together in activities your loved one enjoys can help improve their quality of life and manage behavior changes that may come with the disease, such as sleep problems, aggression, and agitation. It can also help grow and strengthen your connection. However, it may be difficult to know what activities you can safely do with your loved one.

## Staying Physically Active with Alzheimer's

Being active and getting exercise helps people with Alzheimer's disease feel better. Exercise helps keep their muscles, joints, and heart in good shape. It also helps people

stay at a healthy weight and have regular toilet and sleep habits. You can exercise together to make it more fun.

You want someone with Alzheimer's to do as much as possible for himself or herself. At the same time, you need to make sure that the person is safe when active.

## Unwinding of Medicaid Continuous Coverage: What Does it Mean for You?

The end of the federal public health emergency (PHE) for COVID-19 means millions of low-income older Americans stand to lose their Medicaid coverage.

Those at risk include people who no longer qualify for Medicaid and those who are still eligible but face practical barriers to getting their coverage renewed.

There are steps you can take to reduce your risk of losing Medicaid benefits as well as affordable alternatives if you or your loved one does lose coverage.

## The ABCs of Respite: A Consumer Guide for Family Caregivers

Respite is a service that provides a temporary break between the family caregiver and the care recipient. It is most important for caregivers to plan ahead if possible when they begin their caregiving activities to access intermittent breaks from caregiving. To be most effective you should consider respite services much earlier than you think you will need them. Respite will be most helpful if you use it before you become exhausted, isolated, and overwhelmed by your responsibilities. Respite services should be beneficial, meaningful, and enjoyable to both the caregiver and the care recipient.

In this Consumer Guide published by the ARCH National Respite Network and Resource Center, you can find insight on how to plan for respite, information about the types of respite available, and answers to the following questions:

- How do I find and pay for Respite?
- How do I choose a respite program or provider?

- How do I choose an Adult Day Services Program?

## Dementia-Friendly Initiatives for Individuals Living with Dementia, Care Partners, and Communities

Many existing affordable programs for individuals living with dementia are under-used. This article outlines the history of Dementia-Friendly America and efforts in states to address the needs of individuals living with dementia and their care partners within an Age-Friendly framework. It reviews existing state programs that focus on gaps in services for these sub-populations, the need to communicate about available, affordable programs and services, and public health initiatives to fund community-based supports for people living with dementia and their care partners. It addresses inclusivity, anti-ageism, and equity, as well as how to address quality outcomes in each of those areas.

## Less Myelin Content in the Brain Linked to Faster Cognitive Decline

People whose brains have less myelin — the fatty tissue that insulates nerve cells — experience steeper declines in cognition over time, according to an NIA study published in *Alzheimer's & Dementia*. The findings show the impact of myelin content as healthy people age and underscore myelin as a potential therapeutic target for neurodegenerative diseases, such as Alzheimer's and mild cognitive impairment.

**Caregivers Feeling the Squeeze of "Sandwich Caregiving"**

An estimated 11 million Americans provide unpaid care to older adults while also caring for their children. (For comparison, that's slightly more people than the entire population of the state of Georgia.) Known as “sandwich caregiving,” this type of intergenerational care is emotionally, physically, and often financially taxing. Elder care is expensive and increasingly complex. Navigating the bureaucracies of health care and insurance can feel like a full-time job. Moreover, due to a variety of societal trends, the “sandwich” years are lasting longer than ever, increasing caregivers’ risk of burnout.

**LEARN MORE**

Roughly 60 percent of the calories in the average American diet come from highly processed foods. We've known for decades that eating such packaged products -- like some breakfast cereals, snack bars, frozen meals and virtually all packaged sweets, among many other things -- is linked to unwelcome health outcomes, like an increased risk of diabetes, obesity and even cancer. But more recent studies point to another major downside to these often delicious, always convenient foods: They appear to have a

significant impact on our minds, too.

## **Lifetime Employment-Related Costs to Women of Providing Family Care**

The U.S. Department of Labor's Women's Bureau has released a new report on how caring for family has long-term impacts on a mother's lifetime earnings. It finds the amount of time women spend providing essential care to children and adults has a substantial personal economic cost that continues long after the caregiving ends.

The estimated employment-related costs for mothers providing unpaid care averages \$295,000 over a lifetime, based on the 2021 U.S. dollar value, adjusted for inflation. Unpaid family caregiving reduces a mother's lifetime earnings by 15 percent, which also creates a reduction in retirement income.

## How is Alzheimer's Disease Treated?

Alzheimer's disease is complex, and it is unlikely that any one drug or other intervention will ever successfully treat it in all people living with the disease. Still, in recent years, scientists have made tremendous progress in better understanding Alzheimer's and in developing and testing new treatments.

## MIND and Mediterranean Diets Linked to Fewer Signs of Alzheimer's Brain Pathology

The MIND and Mediterranean diets — both of which are rich in vegetables, fruits, whole grains, olive oil, beans, and fish — are associated with fewer signs of Alzheimer's disease in the brains of older adults. Green leafy vegetables in particular were associated with less Alzheimer's brain pathology. This NIA-funded study, published in *Neurology*, suggests these diets may help protect the brain from damage caused by Alzheimer's.

## New Clinical Handbook for Treating Family Caregivers

Do you have questions about who “caregivers” are, what they experience, and how caregiving impacts mental health? A new book by Dolores Gallagher Thompson of Stanford University, *Family Caregiver Distress*, takes a “deep dive” to answer the

questions that mental health providers encounter when working with family caregivers. It provides a comprehensive overview and includes current information about evidence-based practices that reduce caregivers' distress. Health care providers working with family caregivers will find it an invaluable resource.

## **Hospitalization for Infection Linked to Higher Dementia Risk**

Hospitalization due to infection may increase a person's likelihood of developing dementia, according to a large NIA-funded observational study. The researchers found people hospitalized with an infection were more likely to be diagnosed with dementia years later than those who were not hospitalized with infections. The results, published in JAMA Network Open, suggest measures taken to prevent infection may also contribute to dementia prevention.

## Insomnia Drug May Lower Levels of Alzheimer's Proteins

Researchers have been experimenting with drugs approved for other uses to see if any have effects in Alzheimer's disease. Testing previously-approved drugs has the potential to speed clinical trials for dementia prevention and treatment.

Recently, a class of drugs called dual orexin receptor antagonists (DORAs) have been developed to help treat insomnia. Orexin is a chemical in the brain that promotes wakefulness. By blocking orexin, these drugs can help people fall asleep.
