

THIS WEEK IN CAREGIVING

November 30, 2022

Happy National Family Caregivers Month!

CAREGIVING IN THE NEWS

How to Know if You Have a Genetic Risk for Alzheimer's

The actor Chris Hemsworth announced last week that he's taking a break from acting to focus on his health. The news came after Mr. Hemsworth learned through genetic testing that he has two copies of the APOE4 gene variant, which is associated with increased odds of developing Alzheimer's disease, the most common form of dementia. The 39-year-old star of "Thor" has not reported having any symptoms, but he told Vanity Fair that he wanted to focus on mitigating his risk as much as possible.

10 Amazing Resources for Caregivers from Someone Who's Been There

Transitioning into the role of caregiver can be confusing, scary and overwhelming. That's where great resources come in. From websites to social media accounts, there's a wealth of information out there that can help you feel supported in your journey.

To get the best of the best advice and resources, we tapped Lisa Nigro, who is a full-time caregiver to her 30-year-old son, Nick. Here's what she had to say.

NAC NEWS AND UPDATES

Caregiving is
an emotional
experience.

CALL: 1.888.665.2190

to tell us about the challenges and joys
you experience as a family caregiver.

The National Alliance for Caregiving Opens Phone Line for Family Caregivers to Talk About Their Mental Well-Being

Sponsored by Travers Therapeutics, the National Alliance for Caregiving is spearheading a project to advance the mental well-being of family caregivers in the United States. NAC wants to hear from family caregivers on the joys, challenges and struggles they've faced on their caregiving journey in order to better understand their needs and the supports and interventions that can be introduced to assist them.

If you're a family caregiver or have cared for someone in the past, call **1-888-665-2190** to share your caregiving story and the feelings associated with it.

If you would prefer to write out your response rather than leave an audio message, you may do so [here](#).

We want to know:

- What joys have you experienced as a caregiver?
- How are you feeling about being a caregiver?
- What are challenges you have faced as a caregiver?
- What are concerns you have about providing care?

The message you leave will inform policy and practice efforts to improve support for family caregivers like you! All messages left will be anonymous, with only the transcript being used to help us advocate for change.

To learn more, click the red button below.

LEARN MORE

It's important to recognize those with chronic pain and the family caregivers that help care for them. This second installment in the Social Innovations Spotlight Series is written by Dr. Fawn Cothran, PhD, RN, GCNS-BC, FGSA, Hunt Research Director at the National Alliance for Caregiving, and explores those caring for someone with chronic pain and the tools that are available to assist them. [Assessing the Pain of Care Recipients: Tools Available to Family Caregivers](#) utilizes a rapid literature review to identify and discuss the tools available to chronic pain caregivers to assess pain in their care recipient and how these caregivers can be better supported in their role.

NAC Releases New Report: Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health

The National Alliance for Caregiving is proud to present *Chronic Disease Family Caregiving Through a Public Health Lens: The Framework for Family Caregiving and Public Health*, a new report developed with support from The John A. Hartford Foundation and in partnership with the National Association of Chronic Disease Directors (NACDD). This framework outlines policy recommendations, implementation actions and messaging content to help the public health community address the complex needs of America's 53 million family caregivers.

Included in this report:

- A foundation of the framework and background into why it's needed;
- Strategies and recommendations for viewing family caregiving through a public health lens;
- A framework comprised of public health data gathering research, education, and awareness and service coordination and delivery across sectors and siloes;
- Actions for implementing an expanded family caregiver support infrastructure via a pilot program.

Guided by the expertise of state-based chronic disease directors, NAC's report and framework recognizes the importance of caregivers as a vital part of the health care team and that supporting these family caregivers is essential for improving public health outcomes for communities and the nation.

World Carers Conversation 2022 Session Recordings

World Carers Conversation returned May 19, 2022 as a global, virtual event with the support of EMD Serono and Embracing Carers. Innovators, researchers, policymakers and carer advocates from around the globe learned about advancements in the field, got inspired, and made connections that matter for the future of carers everywhere. These recordings cover the primary conversations and topics discussed.

Global Voices of Caregiving: A PhotoVoice Project

As part of the World Carers Conversation 2022, NAC worked with Chief Story Officer Anne Levy and caregivers from around the globe to help them tell their own story through a series of photos. These photos addressed simple questions about being a caregiver, such as what works, what doesn't work, and what a world that embraces and supports caregivers would look like. Each one of these stories is unique to the caregiver's own experience and tells a diverse story of what it's like to care for others, an act which connects us all.

“
I am always learning from and sharing with my fellow carers how to care for myself while caring for my loved one.

DECEMBER

Constructing a National Vision for Family Caregiver Support

December 1, 2022 | 11:30 AM - 12:30 PM ET | Online

On September 21, 2022, the Administration for Community Living, an agency within the U.S. Department of Health and Human Services, delivered the 2022 National Strategy to Support Family Caregivers to Congress. The strategy was created to support family caregivers of all ages, from youth to grandparents, and regardless of where they live or what caregiving looks like for them and their loved ones.

During this presentation, participants will learn about how the strategy was developed, including the formation of an innovative public/private partnership that facilitated the work, and how it can be leveraged to create a “whole of society approach” to greater recognition and inclusion of family caregivers and those they support.

**>>>> Road Map to
Acute Care Management**

Two circular portraits of women are shown against a red background with a white diagonal line. The woman on the left has blonde hair and is wearing a blue top. The woman on the right has dark hair and is wearing a purple scarf.

Road Map to Acute Care Management

December 2, 2022 | 12:00 PM - 1:00 PM ET | Online

It can be difficult to navigate Emergency Room (ER) visits for a loved one with dementia. Join us for Road Map to Acute Care Management and learn practical tips and professional advice on how to best manage these situations.

Geriatric Nurse Practitioner, Linda Pellegrini, along with Caregiver, Judy Johanson, will provide:

- Guidance on what to bring with you to the ER
- Advice on interacting with hospital staff
- Explanation of important medical forms to complete in advance

This program is part of the Massachusetts Alzheimer's Disease Research Center (MADRC) "Aging & Memory Loss Road Map Education Series." The presentation will be held via Zoom.

Registrants will receive the Zoom link via email a few days prior to the event.

How Seasonal Decorations Might Affect a Person with Dementia

December 5, 2022 | 1:30 PM - 3:00 PM ET | Online

Decorations can be associated with a range of festivities such as Christmas, Thanksgiving, Diwali, Chinese New Year or Eid. Let's explore why decorations might be unsettling or upsetting for people with dementia and some ideas about how you might deal with this.

This session will outline some of the main considerations when decorating your house and the positive and challenging effects this may have for the person with dementia.

Our health and care professionals will explore with you a range of strategies to help you in your caring role to manage these situations.

As well as providing information and knowledge this online session offers the opportunity to share or discuss your own experiences or current challenges.

The session is for you if you would like to ...

- learn about how changes in the brain can affect how, and what the person can see and how they may interpret things in the environment
- explore practical ways of decorating your house which will not cause stress or confusion to the person with dementia
- increase your awareness of the challenges which may be created which we wouldn't ordinarily think of
- spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- meet other people who are taking care of a friend or family member with dementia in a similar situation.

Sessions are all on Zoom and last approximately 1.5 hours.

Conscious Caregiving

December 7, 2022 | 1:00 PM - 2:30 PM ET | Online

The Alzheimer's Association and Juniper invite you to join us for a caregiver awareness event on December 7th.

During the holiday season, many people are visiting older relatives and friends and notice changes. Grandma missed some steps in her Thanksgiving turkey recipe that she's been making for the last 30 years. Or a brother repeatedly forgot recently shared information, like the news that someone passed away or is having a baby. What do these changes mean?

If someone in your life has Alzheimer's or another dementia, communicating with them over the disease progression can be a challenge. In this session, the Alzheimer's Association will walk through effective communication strategies for caregivers to help connect with friends and family who have Alzheimer's or another dementia. Then, Juniper will share and demonstrate the Powerful Tools for Caregivers class. Powerful Tools for Caregivers is a class that supports family caregivers to identify and reduce stress, improve communication with family and health care providers, and master caregiving decisions.

Understanding Compassion Fatigue and Burnout

December 8, 2022 | 1:00 PM - 2:00 PM ET | Online

Does compassion cause suffering? When does it go too far and how can caregivers protect their own wellbeing? Learn the warning signs, who is at risk, and how to restore your emotional energy with a licensed therapist.

On December 8th, Mindspring Mental Health Alliance will host a webinar on compassion fatigue and burnout among caregivers.

The presentation will feature Jaymi Dormaier, a Licensed Master Social Worker with ten years of experience in the mental health field. During Jaymi's career as a social worker and therapist she has worked with diverse populations focusing on anxiety, depression, grief, trauma, foster care, adoption, homelessness, and addiction. She is passionate about helping others live a life they love.

[Fine print: Certificates of attendance are provided at no cost. CEUs are not provided. Everyone who registers will receive the webinar recording & resource info 24 hours after the live event.]

A New Model of Care: Dementia Connection Model

December 9, 2022 | 1:00 PM - 2:00 PM ET | Online

Learn about a new model of care called the Dementia Connection Model and walk away with a number of tools for your caregiver toolbox!

In this dementia care webinar, you will learn about the first-ever cognitive-behavioral approach to care called the Dementia Connection Model©, created by Dr. Jennifer Stelter, clinical psychologist, dementia expert, and Johns Hopkins Press author of *The Busy Caregiver's Guide to Advanced Alzheimer Disease*. The model ties together three key concepts in understanding Alzheimer's disease and other forms of dementia and how to provide the best quality of care. You will better understand the "why?" of dementia to provide a quality of life for those you care for. Then, you will exercise your brain in learning "how" to best implement the "what" - sensory-based, non-pharmacological approaches that positively influence the emotions and memories for those living with dementia, enabling positive, productive behavior expressions and a better connection.

You can earn 1 FREE continuing education (CE) credit, after completing the webinar evaluation.

Caregiver Burnout: For Caregivers of Autistic Children

December 10, 2022 | 12:00 PM - 1:00 PM ET | Online

Parenting can be stressful, however studies have shown that parents of Autistic children score much higher on stress indicator tests.

Higher stress levels can be attributed to several factors including:

- Lack of help/support
- Lack of understanding of the child's needs
- Financial burdens
- Long waiting lists for assessments and professional support
- Dealing with judgment from society & family members
- Needing self-care & sensory needs support

And the list goes on and on....

So how can we come together to best support parents and caregivers of children with exceptional needs?

Spectrum Lingo has put together this free webinar to show caregivers how best to empower themselves and avoid experiencing burnout. How can you best serve your child if your tank is empty? So let's fill up your tank and teach you skills and strategies so that

you can step into your power and keep your engine running!

Music: The Uses and Benefits

December 12, 2022 | 11:00 AM - 12:30 PM ET | Online

Music can provide connection and shared experience between you and the person with dementia. It is particularly useful in everyday situations when other communication or activities are more challenging.

Music can help to maintain a person's quality of life or even improve it. For carers, music can be beneficial by helping to lighten mood, helping create connections, reduce stress and bring back memories.

The webinar, presented by Dementia Carers Count in the UK, will be hosted by Alex Stirling and will explore the benefits of music and ways in which it can be used in everyday situations.

Alex is a Speech and Language Therapist who specialises in working with adults with acquired communication disabilities. Her interest in dementia has been influenced by the experience of being a part-time carer for her mother.

This session is for you if you would like to ...

- To learn about the role of music when supporting someone with dementia
- Your questions around music addressed in a safe, supportive environment by healthcare professionals with experience of supporting people with dementia and their families
- To meet other people who are supporting a friend or family member with dementia in a similar situation

To register for this event, click on the red button below.

Understanding Psychological Wellbeing

December 13, 2022 | 8:30 AM - 10:00 PM ET | Online

This session will explore the psychological needs for you in your caring role and also for the person who has dementia to support the well-being of you both.

This session is for you if:

- you would like to gain a better understanding of your own needs for well being and those of the person with dementia
- you would like to learn about the different factors which can contribute to a persons well being
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

Sustainable Caregiving for Care Partners of People with Neurologic Illness

Tuesdays, January 10 - February 28, 2023, 5:00 PM – 6:30 PM ET | Online

This course will meet weekly for eight sessions, online workshop to learn evidence-based skills to make your caregiving sustainable.

This is a live-online program of eight weekly 90-minute classes. In each class, you will learn evidence-based skills to help make your caregiving sustainable.

Teaching methods include brief lecture periods mixed with experiential exercises. You will also have opportunities to speak with others in structured break-out groups (pairs or

triads) as well as in the larger group.

Each class will have its own theme and the opportunity to practice new skills in a safe place, so that they're more available during the days ahead. Themes include:

- Attentional balance and grounding
- Repertoire of stress responses and meeting difficult emotions
- Positive intention setting
- Mindful self-compassion
- Challenging relationships and patients' concerns around "being a burden"
- Re-framing chronic sorrow
- Balance and growth in adversity
- 'What works for me?' -- wellness practice -journals to cultivate a positive mindset

If you have questions about this program, contact Program Manager Gayle Kojimoto at 415.509.8645 or gayle.kojimoto@ucsf.edu.

Transforming Hardship into Healing

January 18, 2023 | 6:00 PM - 7:00 AM PT | Online

Health challenges can be daunting. The disorienting and confusing nature of a health issue tends to put a strain on relationships; conflicts, changing roles, shifting expectations, sensitive and uncomfortable topics can all add to the messy mix. Whether in a caring dynamic at home, in a clinical or organizational setting, we may find ourselves having difficult conversations. Many relationships, familial and professional alike, snap under the pressure of disagreement.

Tune in on January 18th for a workshop led by Joe Weston that will guide participants through the murky waters of how to have difficult conversations - how does one bend rather than break in tense confrontations? Whether you're dealing with, or caring for someone with a health challenge, working in a caring profession and trying to understand how to better relate to peers, or even working towards a shift in your organizational culture, Joe will offer tried and true insights about how to transform hardship into healing relationships.

Joe Weston is an author, educator, and guide. With a career spanning 30+ years in the fields of conflict prevention, leadership, stress management, and communication, he is a highly sought-after facilitator for individuals, as well as corporations, government agencies, and nonprofits around the world.

Managing Changes in Movement and Sensation

January 23, 2023 | 8:30 AM - 10:00 AM ET | Online

This Zoom meeting presented by Dementia Carers Count on January 23rd (8:30 AM) will explore how changes in the brain affect everyday tasks

It will be an opportunity to focus specifically on some of the motor and sensory challenges which can occur for a person with dementia alongside support strategies which can really impact on the well-being of the person and your ability to cope with the challenges. These challenges may include sequencing everyday tasks such as getting dressed, eating a meal, sensations, and spatial awareness. By understanding the challenges for the person with dementia, this session will provide you with the knowledge that you have the ability and skills to support some of these challenges.

This session is for you if:

- you would like to learn about how changes in the brain can affect what the person senses and the complexity of the everyday tasks we complete daily
- you would like some ideas for simplifying tasks and help the persons sensory awareness
- you want to spend time with experienced healthcare professionals who will answer your questions in a safe, supportive environment
- you would like to meet other people who are taking care of a friend or family member with dementia in a similar situation

Meaningful Activity

January 30, 2023 | 8:30 AM - 10:00 AM ET | Online

Why is meaningful activity important for people with dementia?

Meaningful activity is important to help us all maintain a good quality of life, whether we are living with dementia or not. It is particularly important for people with dementia as it:

- Helps maintain skills and independence
- Helps maintain brain (cognitive) function
- Builds and preserves self-esteem and self-confidence

- Gives an outlet for self-expression
- Provides social and emotional connection

The type of meaningful activity a person with dementia will be able to engage in will depend on their interests, strengths and abilities.

Meaningful activity can vary from daily tasks such as cooking and cleaning, to art classes, watching films, exercise and spending time with family and friends.

Why join this session?

It is an opportunity to consider activities and why they are important to someone with dementia. The session explores different sorts of activities might meet the different needs of an individual. There will be some practical advice and strategies about how to engage someone in activities.

The course is for you if you would like to ...

- Know more about why activities are important
- Consider the different needs an individual has and how activities might meet these
- Learn some hints and tips about how to get someone involved in activities
- Spend time with experienced healthcare professionals who will answer your questions in a safe and supportive environment
- Meet other people who are taking care of a friend or family member with dementia in a similar situation

FEBRUARY

Caregiver Learning Workshop: Estate and Elder Law Planning

February 16, 2023 | 1:00 PM - 2:00 PM ET | Online

Join Rebecca L. Wilson (Attorney, Myers Billion LLP Law Firm) on February 16th that will cover estate planning and elder law tools that can help you get your ducks in a row. She will focus on tools that enable caregivers to handle issues that arise, from paying bills to making medical decisions. We will discuss ways to create a plan that ensures an individual's wishes are carried out, both during any incapacity and on death. We will also

cover the consequences of failing to put together a plan ahead of time and the options that remain when emergencies arise.

PATIENT AND CAREGIVER STUDIES

Effects of Vascular Health on Changes Linked Alzheimer's Disease

Start: Sept. 17, 2012

End: Dec. 31, 2026

Enrollment: 850

Where Is the Study? Tennessee

What Is This Study About?

The Vanderbilt Memory and Aging Project is a long-term observational study to understand the relationship between heart and blood vessel health, called vascular health, to the biological markers of early Alzheimer's disease. In an earlier part of the study, scientists found that changes in vascular health were associated with changes in cognition, brain size, and other biological changes associated with early Alzheimer's. The current study will examine the effects of vascular health on the same measures in people with normal cognition. All participants will attend a four-hour study visit to complete memory and thinking tests, undergo an MRI, an echocardiogram, and provide blood and cerebrospinal fluid samples. Every 18 to 24 months for up to five years, participants will return to repeat the same tests and procedures. Information gathered in this study will help develop new tools for the early detection of Alzheimer's.

Do I Qualify To Participate in This Study?

Minimum Age: 60 Years

Maximum Age: N/A

Must have:

- Normal cognition
- English as primary language
- Availability of a reliable study partner who knows the participant well enough to complete questionnaires and interviews about the participant's general memory, health, and thinking

Must NOT have:

- History of brain disease that could affect brain structure or function, including:
 - Major psychiatric illness (e.g., schizophrenia, bipolar)
 - Neurological illness (e.g., stroke, epilepsy, multiple sclerosis, Parkinson's disease, dementia)
 - Head injury that resulted in loss of consciousness
- Diagnosis of congestive heart failure, atrial fibrillation, or other heart arrhythmia
- Diagnosis of chronic obstructive pulmonary disease
- Current diagnosis of cancer
- History or current serious alcohol or drug abuse
- Any condition that may make having an MRI brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy, body size and shape that prevents comfortable fit in scanners)
- Living in a nursing home or other long-term care facility

To learn more about the study or enroll, contact **Paige Crepezzi** at (617)643-6348 or by clicking on the red button below.

LEARN MORE

Brain Stimulation for Primary Progressive Aphasia

Start: March 1, 2022

End: Jan. 31, 2024

Enrollment: 30

Where Is This Study Located? Massachusetts

What Is This Study About?

Primary progressive aphasia (PPA) involves changes in the ability to use language to speak, read, write, and understand what others are saying. This study will evaluate the effectiveness of noninvasive brain stimulation to improve language performance in people with PPA. Participants will be randomly assigned to receive either the intervention or a sham treatment once a day on weekdays for two weeks. At the start and end of the study, participants will complete language performance tests and undergo MRI brain imaging. Researchers will measure changes in language skills and brain connectivity.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: 90 Years

Must have:

- Diagnosis of PPA
- Observed for at least one year by a specialized clinician
- Mild to moderate language impairment
- Native English speaker
- Availability of a study partner (e.g., spouse, sibling, or adult child) who can accompany participant to every study visit

Must NOT have:

- History of seizures, unexplained fainting, or an immediate family member with epilepsy
- History of serious neurological illness unrelated to neurodegeneration associated with PPA (e.g., multiple sclerosis)
- History of serious medical problems (e.g., poorly controlled diabetes, uncontrolled high blood pressure, cancer within the last five years)
- Symptoms of major depressive disorder, bipolar disorder, schizophrenia, substance use disorder, or intellectual disability
- Evidence of significant brain disorder, including cerebrovascular disease, hydrocephalus, or brain tumor, as determined by MRI brain imaging
- Any condition that may make having an MRI brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy, body size and shape that prevents comfortable fit in scanners)
- Pregnant or breastfeeding

Online Training Program for Latino Dementia Caregivers

Start: November 2022

End: September 2024

Enrollment: 48

Where Is This Study Located? San Antonio, Texas

What Is This Study About?

This study is evaluating the effectiveness of an online caregiver education program, named Learning Skills Together or Juntos, to improve confidence and overall well-being of Latino family caregivers of a person with dementia. Participants will be randomly assigned to participate in the program either immediately or as part of a waitlist group that will complete the program three months later. At the start and end of the six-week study, caregivers will answer questionnaires related to their confidence performing care tasks, resilience to challenging behaviors, and overall health.

Do I Qualify To Participate in This Study?

Minimum Age: 18 Years

Maximum Age: N/A

Must have:

- Family member to a person diagnosed with Alzheimer's disease or a related dementia
 - Person with dementia must have a Global Deterioration Score between 4 and 6
- Provide unpaid assistance with at least one major activity of daily living (e.g., bathing, eating, dressing)
- Able to read and speak English or Spanish

Must NOT have:

- Previous participation in the Learning Skills Together program
- Plans to place the care recipient in a skilled nursing facility within the next six months
- Severe depression, based on study screening evaluation

To learn more about the study or enroll, contact **Carole White** at (210)567-5831 or by clicking on the red button below.

Memory Training to Improve Cognitive Function in Older Adults

Start: April 7, 2022

End: Feb. 28, 2023

Enrollment: 30

Where is this study located? Michigan

What is this study about?

Working memory allows a person to remember and access information in the mind without losing track of what they are doing, such as a task. This study will test whether working memory training can improve learning and memory in people with mild cognitive impairment or normal cognition. Participants will receive online or in-person working memory training for 10 training sessions. At the start, end, and one month after the two-week training period, participants will take memory tests and undergo MRI brain imaging.

Researchers will evaluate changes in task performance, memory, and cognition, and brain activity.

Do I Qualify To Participate in This Study?

Minimum Age: 60 Years

Maximum Age: N/A

Must have:

- Diagnosis of mild cognitive impairment
- Right-handed

Must NOT have:

- History of a neurological or medical condition known to affect cognitive functioning, other than mild cognitive impairment
- Serious mental illness
- Significant vision, hearing, or other impairment that limits the ability to participate
- History of alcohol or drug abuse
- Any condition that may make having an MRI brain scan unsafe (e.g., metal shrapnel, heart pacemaker, severe claustrophobia, epilepsy, body size and shape that prevents comfortable fit in scanners)

To learn more about the study or enroll, contact **Alexandru Iordan** at (734)647-3704 or by clicking on the red button below.

LGBTQIA+ & Non-LGBTQIA+ Caregivers Needed: Parkinson's Research

Are you 18+ and a caregiver for someone living with Parkinson's?

The UNLV School of Public Health and the Michael J. Fox Foundation for Parkinson's Research just launched an exciting research study – and we need your help! Parkinson's Research with Inclusion, Diversity, and Equity ("PRIDE") explores the health and health care needs of people living with Parkinson's disease.

Little is known about the LGBTQIA+ community because questions about us are not often asked in research. This one time, 45-minute phone study measures the unique needs and struggles of LGBTQIA+ individuals with Parkinson's and their caregivers. It will answer some of the following questions: What problems do LGBTQIA+ individuals with Parkinson's disease experience when using health care services? Would the community benefit from additional support and services? How do LGBTQIA+ people find the services they need?

Participation is voluntary and all information will be kept private. Participants will receive a \$25 Visa E-gift card.

All questions can be directed to primary investigator Jason Flatt, PhD at 702-895-5586 or Jason.Flatt@unlv.edu. Please note that we unfortunately cannot accept Google phone numbers.

Complete the survey today by calling **1-888-709-7689!** To learn more about the study, click on the red button below.

Life Enhancing Activities for Family Caregivers (LEAF)

Researchers at Northwestern University and the University of California San Francisco are testing a program for family caregivers of individuals with Alzheimer's Disease. Six positive

emotion based skill-building sessions are delivered either one-on-one via Zoom video-conferencing with one of our facilitators or via a self-guided platform online. Participants will be supplied with tablet computers, so caregivers can take part from anywhere in the USA. The study consists of one hour long session per week for six weeks to learn the skills, nightly home practice, and online surveys. To be eligible, you must be the primary caregiver of someone with Alzheimer's Disease, and you must have consistent access to a reliable Wi-Fi connection for your weekly sessions.

We know that caregiving for your loved one can be stressful, especially in these uncertain times. By sharing these skills, we are not saying that positive emotion will magically make everything better or easier. Instead, the program is based on the fact that even in the midst of challenging and stressful circumstances, positive emotion can occur, and there are things you can do to notice, create, and savor the good things to increase your own experience of positive emotion.

The Alzheimer Prevention Trials (APT) Webstudy

Start: December 20, 2017

End: April 30, 2023

Enrollment: 20,0000

The Alzheimer Prevention Trials (APT) Webstudy is an online registry designed to accelerate enrollment for Alzheimer's disease clinical trials by identifying and tracking individuals who may be at higher risk for developing Alzheimer's dementia.

The APT Webstudy monitors volunteers who are 50 and older for changes in their memory through a series of quarterly, no-cost memory tests. It takes place online, without any in-person visits required. APT Webstudy researchers use the results to track volunteers' memory and, based on potential risk level, invite select volunteers to participate in other Alzheimer's research studies.

Participants in the Webstudy, will receive:

- Access to secure, web-based tools to assess your brain's cognitive function over time;
- A personalized dashboard with insights into your own memory based on test results;
- The potential opportunity to participate in comprehensive memory evaluations at one of our nationwide clinical sites; and
- The potential opportunity to participate in clinical trials to prevent Alzheimer's disease.

Mindcrowd Memory Test

MindCrowd is an online research study to understand the factors that influence how the human brain functions. Specifically, MindCrowd researchers want to know how the way people remember things might change as they age. If researchers better understand the way memory changes as people age, they may be able to understand what changes occur in people who have an age-related brain disease that affects their memory (like Alzheimer's disease and other dementias).

Participants will take one attention test and one memory test, and answer a few study-related questions. The online memory test takes approximately 10 minutes to complete.

Participant test results show how they performed compared to all of those who have taken the MindCrowd memory and attention test so far. MindCrowd is testing only a small fraction of each participant's overall cognitive performance. The MindCrowd test results reflect each individual's performance for that specific cognitive domain and do not indicate overall ability or intelligence.

PARTICIPATE

AHEAD Study

Start: July 13, 2020

End: October 25, 2027

Enrollment: 1400

The AHEAD Study is an exciting step in the fight against Alzheimer's disease. This trial, funded by the National Institutes of Health (NIH) and Eisai Inc., aims to help prevent Alzheimer's disease by testing an investigational treatment aimed at delaying memory loss before noticeable signs of Alzheimer's disease begin.

The AHEAD Study tests whether an investigational treatment can slow or stop the earliest brain changes due to Alzheimer's disease in people with a higher risk of developing the disease later in life. It is an opportunity to work with world-renowned experts to carefully

monitor your brain health at no cost and take advantage of the latest advances made in treatment.

The AHEAD Study is the first of its kind to:

- Enroll participants as young as 55 years old who are at risk of developing symptoms of Alzheimer's disease as they get older;
- Use a blood test to rule out people not likely to be eligible based on amyloid PET imaging;
- Target the earliest changes in the brain due to Alzheimer's disease by enrolling participants with intermediate levels of brain amyloid;
- Use an approach that tailors dose levels of the investigational treatment to study participants' brain amyloid levels;
- Test an investigational treatment that has been shown to lower brain amyloid in people with symptoms of Alzheimer's.

Dementia and The Holidays

As a caregiver, it can be a struggle trying to find a way to balance dementia and the holidays. There's so much pressure to make everything perfect and it can end up leading to some expectations that are just impossible to reach. That's why in this video, Debra Kostiw offers some of her best tips for organizing a successful holiday celebration while caring for a person with Alzheimer's or dementia.

RESEARCH & RESOURCES

Legal and Financial Planning for People with Dementia

Many people are unprepared to deal with the legal and financial consequences of a serious illness such as Alzheimer's disease or a related dementia. Legal and medical experts encourage people recently diagnosed with a serious illness — particularly one that is expected to cause declining mental and physical health — to examine and update their financial and health care arrangements as soon as possible. Basic legal and financial documents, such as a will, a living trust, and advance directives, are available to ensure that the person's late-stage or end-of-life health care and financial decisions are carried out.

[LEARN MORE](#)

What Is Long-Term Care?

Long-term care involves a variety of services designed to meet a person's health or personal care needs during a short or long period of time. These services help people live as independently and safely as possible when they can no longer perform everyday activities on their own.

Long-term care is provided in different places by different caregivers, depending on a person's needs. Most long-term care is provided at home by unpaid family members and friends. It can also be given in a facility such as a nursing home or in the community, for example, in an adult day care center.

Planning for the Future After a Dementia Diagnosis

If you or a loved one has been diagnosed with Alzheimer's disease or a related dementia,

it may be difficult to think beyond the day to day. However, taking steps now can help prepare for a smoother tomorrow.

Over time, the symptoms of Alzheimer's and related dementias will make it difficult to think clearly. Planning as early as possible enables you to make decisions and communicate those decisions to the right people.

[LEARN MORE](#)

How to Share Caregiving Responsibilities with Family Members

Caring for an older family member often requires teamwork. While one sibling might be local and take on most of the everyday caregiving responsibilities, a long-distance caregiver can also have an important role.

First, try to define the caregiving responsibilities. You could start by setting up a family meeting and, if it makes sense, include the care recipient in the discussion. This is best done when there is not an emergency. A calm conversation about what kind of care is wanted and needed now, and what might be needed in the future, can help avoid a lot of confusion.

Decide who will be responsible for which tasks. Many families find the best first step is to name a primary caregiver, even if one is not needed immediately. That way the primary caregiver can step in if there is a crisis.

Agree in advance how each of your efforts can complement one another so that you can be an effective team. Ideally, each of you will be able to take on tasks best suited to your skills or interests.

Medicaid Structured Family Caregiving: Enabling Family Members to Make Caregiving Their Primary Focus

Family caregivers play an important role in states' efforts to help Medicaid beneficiaries safely remain in their communities. And, as of August 2022, at least seven states (Connecticut, Georgia, Indiana, Louisiana, Missouri, North Carolina, and South Dakota) covered structured family caregiving (SFC) services provided to older adults and/or people with physical disabilities under their Medicaid programs. Coverage of SFC services results in Medicaid payments and other support to family caregivers, usually including spouses and others who are legally responsible for the beneficiary. This brief, which is based on research and interviews with state staff, examines how Georgia, Missouri, and South Dakota are using Medicaid-funded SFC services to help older adults remain in the homes they share with their loved ones.

SFC services consist of a package of services that support home and community-based services (HCBS) waiver participants' primary caregivers and includes payment, individualized training based on the needs of the waiver participant, coaching, back-up or respite care, and other supports. All interviewees emphasized that they valued SFC services because they enabled HCBS waiver participants who do not self-direct services to receive the personal care they need in their homes from people they know and trust.

Georgia and South Dakota offer SFC services to both older adults and people with disabilities enrolled in Medicaid. Missouri, however, offers the services only to Medicaid beneficiaries with Alzheimer's or a related diagnosis. In all three states, Medicaid beneficiaries must be enrolled in an HCBS waiver to qualify for SFC services. As of July 2022, Missouri was providing SFC services to 62 waiver participants, and South Dakota was providing them to 217 participants. Also, all three states administer their SFC services through agencies, which are entities (usually home health providers) that have agreed to

provide the services. Interviewees reported that approach enabled their states to implement the service without new staff resources and helped ensure appropriate oversight of the care delivered to Medicaid beneficiaries.

To learn more about Medicaid structured family caregiving, click the red button below.

The COPD Caregiver's Toolkit

Caring for someone with chronic obstructive pulmonary disease (COPD) might be new for you. It is a condition that can be hard to understand and manage. COPD is a group of lung diseases including emphysema and chronic bronchitis, or both — that block airflow in the lungs. This makes breathing difficult for people living with COPD.

Caregivers who feel confident about what to do often provide better care for their loved ones. “The COPD Caregiver’s Toolkit” offers advice on a variety of topics for patients and caregivers, including how to prepare for doctors’ appointments, navigate changes in home life, provide help after a COPD flare-up or hospital stay and stay mentally and physically healthy through it all.

To view the toolkit, click the red button below.

Acceptance & Letting Go

We cannot control everything; we can only control our responses. On our caregiver journey, we often want to assert control over situations in order to show love or support. Sometimes the best way to provide care to our loved ones is to practice radical acceptance and letting things go.

Letting go is hard for everyone at first. Courage to Caregivers has put together some tips and philosophies on acceptance.

[LEARN MORE](#)

Paying for Long-Term Care

Many older adults and caregivers worry about the cost of medical care and other help they may need. These expenses can use up a significant part of monthly income, even for families who thought they had saved enough.

At first, many older adults pay for care in part with their own money. Initially, family and friends may provide personal care and other services, such as transportation, for free. But as a person's needs increase, paid services may be needed.

Older adults may be eligible for some government health care benefits. Caregivers can help by learning more about possible sources of financial help and assisting older adults in applying for aid as appropriate.

To learn more about options for paying for long-term care, click the red button below.

Giving Care: An Approach to a Better Caregiving Landscape in Canada

Unpaid caregivers and paid care providers make up the largest part of Canada's health-care and social supports systems. Research shows that they provide approximately three hours of care for every hour provided through the rest of our systems. They help seniors living in the community or in long-term care settings; children and adults with physical, intellectual, or developmental disabilities; people with medical conditions; people experiencing mental illness; and people with changing support needs related to aging.

On November 7, 2022, the Canadian Centre for Caregiving Excellence released its first policy white paper – *Giving Care: An approach to a better caregiving landscape in Canada*. The report aims to ignite a public conversation on the state of caregiving and

offer potential policy solutions to address the many challenges and systemic issues experienced by Canada's 8+ million caregivers and care providers across the country.

Understanding and Treating Depression

It's normal to feel sad, down, or low at times. But these feelings can sometimes linger. They can get worse, too, eventually making it hard to do basic daily tasks. If you've had a depressed mood or a loss of interest or pleasure in most activities for at least two weeks, you may be experiencing depression.

Depression is a serious disorder. "It's not some-thing that you can just 'push through,' or get through without help," says Dr. Kimberly Young, a mental health researcher at the University of Pittsburgh.

Depression isn't caused by a single thing. Some people's genes put them at risk for depression. Stressful situations may trigger depression. Examples include money problems, the loss of a loved one, or major life changes. Having a serious illness like cancer or heart disease can also lead to depression. And depression can make such illnesses worse.

To learn more about depression, click the red button below.

[LEARN MORE](#)

Feeling Fatigued?

Exhaustion seems to be on the rise. Fatigue is one of the symptoms most often reported by people with COVID-19, and their tiredness can linger. Add this to the many other causes of fatigue that existed before the pandemic—such as lack of sleep, mental health concerns, and health conditions like anemia or heart disease. Overall, it seems, we are one weary nation.

Fatigue can be helpful. It can be a warning sign that you need to ease up after strenuous exercise. Or it can make you rest if you get sick. But more often, fatigue creates problems. It can be an overwhelming and lasting feeling of exhaustion that makes it hard to do everyday tasks.

To learn more about fatigue, click the red button below.

engAGED Year Three Poll

The National Resource Center for Engaging Older Adults (engAGED) would like to learn about programs offered by caregiving organizations that specifically address social isolation, loneliness or social engagement. To this end, engAGED is conducting a poll from November 1 to December 2 to learn more about social engagement programs currently offered by Aging Network and partner organizations. This is part of our Year Three project workplan, and builds upon an engAGED poll conducted in 2020.

Responses to this poll will help engAGED learn more about social engagement programs currently offered by Aging Network and partner organizations, including types of programs, partners involved, populations and communities served and outcome measurements. The results from this poll will be used to develop a fact sheet depicting social engagement program trends across the Aging Network and partner organizations.

engAGED is asking partner organizations to promote the poll widely to their networks and have provided a dissemination toolkit that contains sample social media and newsletter language along with sample images. To access the toolkit, click [here](#).

Questions? Contact info@engagingolderadults.org.

To participate in the poll, click the red button below.

Serious Illness Messaging Guide Brief

Evidence-Based Messaging Toolkit for
Serious Illness Care

Serious Illness Messaging Toolkit

Capture public interest, bypass misconceptions, and increase demand for your services with better messaging. This toolkit will show you easy ways to improve your messaging about care for serious illness.

This toolkit is the product a joint endeavor funded by The John A. Hartford Foundation and Cambia Health Foundation. Its launch will take place on November 2.

To access the toolkit, click the red button below..

Long-Distance Caregiving

Anyone, anywhere, can be a long-distance caregiver, no matter your gender, income, age, social status, or employment. If you are living an hour or more away from a person who needs your help, you're probably a long-distance caregiver. This kind of care can take many forms—from helping with money management and arranging for in-home care to providing respite care for a primary caregiver and planning for emergencies.

The U.S. National Institute on Aging provides a number of resources for long-distance carers. To learn more, click the red button below.

If You're About to Become a Cancer Caregiver

Today, most [cancer treatment](#) is given in outpatient treatment centers – not in hospitals. This means someone is needed to be part of the day-to-day care of the person with cancer and that sicker people are being cared for at home. As a result, [caregivers have many roles](#). These roles change as the patient's needs change during and after cancer treatment.

To learn more about cancer caregiving, click the red button below.

LEARN MORE

Adult Day Care

Adult Day Care Centers are designed to provide care and companionship for older adults who need assistance or supervision during the day. Programs offer relief to family members and caregivers, allowing them to go to work, handle personal business, or just relax while knowing their relative is well cared for and safe.

The goals of the programs are to delay or prevent institutionalization by providing alternative care, to enhance self-esteem, and to encourage socialization. Adult day health care offers intensive health, therapeutic, and social services for individuals with serious medical conditions and those at risk of requiring nursing home care.

To learn more about adult day care, click the red button below.

What Are the Caregiver's Rights?

Caring for someone you love after a heart or stroke event can be hard. The responsibilities and the emotional stress of being a caregiver can cause you to forget to take care of yourself.

These rights can help you reaffirm that you have a right to health and happiness, even when you're caring for someone else. They'll help you realize that the emotions and pressures you may be feeling are normal

To learn more about caregivers' rights, click the red button below.

Hospital Discharge Planning: A Guide for Families and Caregivers

A trip to the hospital can be an intimidating event for patients and their families. As a caregiver, you are focused completely on your family member or friend's medical care, and so is the hospital staff. You might not be giving much thought to what will happen when

your friend or family member leaves the hospital.

Everything about this transition – whether the discharge is to home, a short-term rehabilitation (“rehab”) center, or a residential nursing facility – is critical to the health and well-being of the person you care for. Yet, while it’s a significant part of the overall care plan, there is a surprising lack of consistency in both the quality and process of discharge planning across the health care system.

One Way to Help Family Caregivers: Caregiving Navigators

In early 2022, Nexus Insights brought together long-term care providers, caregiver advocates, tech-driven start ups and policy experts to discuss how to help older adults and their caregivers better navigate the complex and fragmented array of long-term care and aging services. The resulting report, "Where Am I, Where Do I Go: The Missing Entry Point to Long-Term Care Solutions for Older Adults and Their Caregivers," details the challenges older adults and their families face and the need for navigational centers, or hubs, to support these individuals as they make critical decisions, often under stressful conditions, about their care needs.

To learn more about the benefits of navigation hubs, click [here](#). To view the report itself, click the red button below.

Alzheimer's Disease Research Centers: National Research Centers, Local Resources

The Alzheimer’s Disease Research Centers (ADRCs) offer local resources, support, and opportunities to participate in research on Alzheimer’s disease and related dementias. These centers are dedicated to developing and testing new ways to detect, diagnose, treat, and prevent dementia and to improving care for people with these diseases and their families. The National Institute on Aging (NIA) at the National Institutes of Health (NIH) funds more than 30 ADRCs at medical institutions across the country. Each center has specific scientific and population areas of focus.

For families affected by Alzheimer’s and related dementias, ADRCs offer:

- Help with obtaining diagnosis and managing your care
- Information about the diseases, services, and resources
- Opportunities for volunteers to participate in clinical trials and studies that contribute to improved understanding of dementia, which may lead to new treatments and better care

- Support groups and other special programs for volunteers and their families

To learn more about resources offered by ADRCs, click the red button below.

Caring for the Caregiver: Balancing Work While Caring for Others

Caregiving is a selfless act, but for most caregivers finding the right balance between employment and their personal well-being can be difficult. It may seem counterintuitive for caregivers to think of themselves, but for a caregiver to effectively manage working while providing care, self-care is essential.

To improve the work-life balance and well-being of caregivers, there are actions they can take and employer-sponsored benefits that may provide some help.

My Health Priorities: A Guide for Older Adults and Care Partners

What matters most in life and health is different for everyone. Managing your health may be particularly difficult if you have multiple chronic conditions.

The more you and your health care team know about what matters most to you, the better you can work together to line up your health care decisions with your Health Priorities.

Patient Priorities Care has come up with a new tool designed to help older adults determine their health and life priorities. The aim of the tool is that knowing your health priorities will help you to communicate what matters most to you to your health care team, family and care partners.

To explore the online tool, click [here](#). To view a printable version, click the red button below.

MOTIVATE: Marketing and Messaging Palliative Care

The Center to Advance Palliative Care (CAPC) has developed the MOTIVATE toolkit about marketing and messaging palliative care.

Due to low public awareness and consistent misconceptions, how you frame palliative care and its benefits is vitally important. Marketing, supported by sound messaging, helps patients, families, referral sources, and service partners understand the work that you do.

Palliative care is about quality of life. When done well, proper messaging and marketing can clarify this and motivate patients, families, and clinicians to take advantage of it.

Use the MOTIVATE toolkit to refine your program's marketing strategy, and your messaging.

To explore the online toolkit, click the red button below.

Just released: 2022 National Strategy to Support Family Caregivers

2022 National Strategy to Support Family Caregivers

The National Alliance for Caregiving – a coalition of 67 national organizations – applauds the release of the 2022 National Strategy to Support Family Caregivers developed by the U.S. Department of Health and Human Services but urges strong accountability and implementation efforts to turn the strategy into action.

The strategy details more than 350 federal actions and 150 measures that state and local governments, public health departments, philanthropies, and community-based, faith-based, and nonprofit organizations can take immediately to support the nation's 53 million family caregivers who make up 21% of the population.

The National Strategy includes potential government actions that address issues that family caregivers say are most important, including:

- 1) **Access to Respite Services**
- 2) **Support with Day-to-Day and Complex Medical Tasks**
- 3) **Inclusion of Caregivers in Care Teams**
- 4) **Financial Education on Caregiving Costs**
- 5) **Better Identification of Family Caregivers**
- 6) **Research on the Needs of Family Caregivers**

NAC was integral to mobilizing the caregiving community in support of the RAISE (Recognize, Assist, Include, Support, and Engage) Act, which established the council and process for developing the 2022 National Strategy to Support Family Caregivers. NAC also worked with The John A. Hartford Foundation and the National Academy for State Health Policy to ensure family caregivers were centered in the development of the recommendations and that the strategy reflected the lived experiences of this diverse community.

We encourage individuals and organizations to **provide public comment** on the National Strategy. The Strategy will be updated biennially, informed in part by public feedback, ensuring it continues to meet the needs of family caregivers and those they care for as they evolve.

Different Care Settings at the End of Life

The three most common places people at the end-of-life die are at home, in a hospital, or in a care facility. While not everyone has the chance to decide where they will die, people who know the end of life is approaching may be able to plan ahead. Several factors may help with this planning, including knowing the type of care you need and want, where you can receive this level of care, [advance care directives](#), [costs](#), and availability of family and friends to help.

Frequently Asked Questions About Palliative Care

Palliative care is specialized medical care for people living with a serious illness. Palliative care can be received at the same time as your treatment for your disease or condition. It focuses on providing relief from the symptoms and stress of serious illness. The palliative care team works to prevent or ease suffering, improve quality of life for both the patient and their family, and help patients and their families make difficult health care decisions. When a patient decides to forgo treatment for their serious illness or is near the end of life, they may decide to enter hospice care.

Vaccinations and Older Adults

When fall arrives, many of us know it's time to get the annual flu, or influenza, shot. It's also a good time to consider what other vaccines or boosters to get to protect your health.

Staying up to date on vaccines is especially important for older adults. Our immune system helps the body fight infection, but it gets weaker as we age. Vaccines help to strengthen the immune system.

Other vaccines that are important to older adults include COVID-19, pneumonia, shingles, and TDP (tetanus, diphtheria, and pertussis).

Hearing Loss and Older Adults

Hearing loss is a sudden or gradual decrease in how well you can hear. It is one of the most common conditions affecting older and elderly adults. Approximately one in three people between the ages of 65 and 74 has hearing loss and nearly half of those older than 75 have difficulty hearing. Having trouble hearing can make it hard to understand and follow a doctor's advice, to respond to warnings, and to hear doorbells and alarms. It can also make it hard to enjoy talking with friends and family. All of this can be frustrating, embarrassing, and even dangerous.

the Brain

How Biomarkers Help Diagnose Dementia

Biomarkers are measurable indicators of what's happening in the body. These can be found in blood, other body fluids, organs, and tissues. Some can even be measured digitally. Biomarkers can help doctors and researchers track healthy processes, diagnose diseases and other health conditions, monitor responses to medication, and identify health risks in a person. For example, an increased level of cholesterol in the blood is a biomarker for heart attack risk.

Before the early 2000s, the only sure way to know whether a person had [Alzheimer's disease or another form of dementia](#) was after death through autopsy. But thanks to advances in research, tests are now available to help doctors and researchers see biomarkers associated with dementia in a living person.

Genetic Risk Factors that Underlie Depression May Also Drive Alzheimer's Disease

Some cases of Alzheimer's disease may be driven by the genetic risk factors that can underlie depression, according to an NIA-supported data-mining study by researchers at Emory University School of Medicine. The results, published in *Biological Psychiatry*,

suggest that the activity of at least seven genes may help explain why depression appears to increase the chances one may experience Alzheimer's.

To learn more about the connection between depression and Alzheimer's disease, click the red button below.

What Is Frontotemporal Dementia?

Frontotemporal dementia is caused by a group of disorders that gradually damage the brain's frontal and temporal lobes. These damages cause changes in thinking and behaviors. Symptoms can include unusual behaviors, emotional problems, trouble communicating, challenges with work, and difficulty with walking.

Frontotemporal dementia (FTD), sometimes called frontotemporal disorders, is rare and tends to occur at a younger age than other dementias. About 60% of people with frontotemporal dementia are 45 to 64 years old.

To learn more about FTD, click the red button below.

What Is Dementia? Symptoms, Types, and Diagnosis

Dementia is the loss of cognitive functioning — thinking, remembering, and reasoning — to such an extent that it interferes with a person's daily life and activities. Some people with dementia cannot control their emotions, and their personalities may change. Dementia ranges in severity from the mildest stage, when it is just beginning to affect a person's functioning, to the most severe stage, when the person must depend completely on others for basic activities of living.

Dementia is more common as people grow older (about one-third of all people age 85 or older may have some form of dementia) but it is not a normal part of aging. Many people live into their 90s and beyond without any signs of dementia.

Partnering with Your Healthcare Provider

**A RESOURCE FOR PEOPLE LIVING
WITH MEMORY LOSS AND THEIR
CARE PARTNERS**

Partnering with Your Healthcare Provider: A Resource for People Living with Memory Problems and Their Care Partners

The University of Washington Dementia Palliative Education Network and the WA State Dementia Action Collaborative have created a new free toolkit for family/friend care partners of people living with dementia.

The goal of this toolkit is to:

- Explain how to form a working partnership with healthcare providers
- Show how to organize, streamline tasks, and communicate about the care needs of the person living with dementia
- Reduce chances of avoidable care transitions

The toolkit includes:

- Easy-to-navigate narrated presentation
- Video scenario demonstrations
- Care, medication, and appointment log sheets

For more information about the toolkit, click [here](#). To view the flyer, click the red button below.
